Introduction: A World of Classics	10

THE 1940s: REVVING UP AGAIN

Car manufacturers worldwide faced tough times after World War II, but huge demand for new models meant an exciting future was on the horizon. While the US led the world in automotive style, the UK chased the 120 mph (193 km/h) sports-car dream, and Europe created brilliant small cars that everyone could afford. Petrol supplies eased and motor shows returned after a long absence. From here, it was foot down to the future.

THE 1950s: WORLD ON WHEELS

Rapidly improving road networks in many parts of the world opened countries up for exploration, and what better way to enjoy this new-found freedom than in a car? The choice of cars available was now enormous. Detroit went crazy with chrome plating and jet-age imagery, and all manufacturers sought to make their cars go faster and farther. Only the bubble car, with its bird-like appetite for fuel, put rationality first and foremost in this age of motoring excitement.

THE 1960s: INNOVATION AND ENERGY

This was the decade when new technology led the way – everything from front-wheel drive to the rotary engine. Executive saloons and two-seater roadsters put the accent on swift acceleration and high-speed handling prowess. The Ford Mustang gave suburbia its own sports car – with Toyota's trusty Corolla to do the shopping – while the E-type and Cobra were race-bred firebrands.

THE 1970s: A CLEANER STYLE

After the party of the '60s came the hangover of the '70s, with valid concerns about air pollution halting the muscle car, and the soft-top almost killed off by road safety fears. Yet hatchbacks made family cars so much more versatile, while motoring fantasies were fuelled by wedge-shaped, mid-engined supercars. Four-wheel drive was a new leisure buzz phrase, and crucial new cars abounded.

THE 1980s: ADVANCING TECHNOLOGY

There had never been such an exciting time to buy your ultimate car, as top speeds smashed through the 200 mph (322 km/h) barrier. But at every level, electronic wizardry boosted performance and comfort in everything from engine management to CD players. Even ordinary saloons received

turbochargers and four-wheel drive. Meanwhile, lead-free petrol and catalytic converters cleaned up the typical car's act enormously.

Preface

When I was young, I could gaze at a beautiful image like the one opposite, of the Mercedes-Benz 300SL "Gullwing", and only hazard at the whys and wherefores of how such a spectacular car came to be. Certainly, it was nothing like the humdrum vehicles I saw in everyday life. Even so, occasionally a car that was manifestly old or unusual would clatter past our house or the school gates. And, once again, I would turn to wondering why modern equivalents - with their drab plastics, uninspiring sounds, and bewildering badges with combinations of letters and numbers - seemed so much less appealing. The fascination slowly took hold, and, before long, I was covertly reading car magazines under the chemistry lab benches when I should have been writing down methods and conclusions. I never did learn much about chemistry, but what I did discover then is that if the classic car knowledge bug gets you, it bites, and I was bitten really hard.

My destiny was to work on a classic car magazine myself, and that is what I did for many years. Along the way, of course, I have owned a few dozen classic cars. They have ranged from a Cadillac DeVille all the way down to a Reliant Robin, with hot hatchbacks and sports cars in between. I have had plenty of adventures, and learnt even more over time about what makes old cars tick. As well as writing about great cars for magazines and newspapers, I have also written about 40 different books on classics of all types. However, when the opportunity arose to be Editor-in-Chief of this, *The Classic Car Book*, I knew it would be something unique.

Over several months, I have been able to look again at the whole spectrum of classic cars from every part of the world, and bring together the most significant, interesting, memorable, and downright beautiful. I have also had the chance to pick some classics of the future - the cars which, in my long experience of watching values hurtle ever upwards, will be the ones to cherish. And some of them, such as the Fiat Barchetta, are currently bargains. (Incidentally, the Barchetta is the only brand-new car I have ever bought, and as many other enthusiasts will know about their own "lost loves", it is one that I wish I had not sold.)

But as to my favourites, the process of curating *The Classic Car Book* has left me just as perplexed as ever. There is as much to love about a humble Austin A40 Somerset as there is a sublime Maserati Mistral. I would like to have a Porsche 911 behind my garage door, just as much as a Corvette.

Few of us have the money and time to own and enjoy every classic car that takes our fancy. Instead, most of us will just be looking at pictures and daydreaming when we should be doing something else. But if you *are* one of the fortunate few - someone who can use this fantastic book as a menu, and plan epic journeys in the cars of your dreams - then do the rest of us a favour: just make sure that you relish every moment!

Gile Cly

A World of Classics

The closest thing to an "official" description of a classic car probably comes from the venerable Classic Car Club of America. For many years, this organization has insisted that only "distinctive" or "fine" cars manufactured between 1915 and 1948 qualify for the title of classic car, with the Lincoln Continental often acting as the closing bracket for the genre.

In the UK - arguably the European birthplace of old vehicle preservation - traditional authorities such as the Royal Automobile Club have planted their own markers in the sand. According to these bodies, "veteran" cars - such as the aged machines that take part in the famous annual London-Brighton run - are defined as those built from 1885 to 1903. "Edwardian" cars are those made from 1904 to 1914, while "vintage" cars hail only from the period between 1919 to 1930. Following the Wall Street Crash of 1929, the bankruptcy of Bentley, and the demise of several other great marques, a golden era is seen to have ended. According to these categories, any worthwhile car built from 1931 to 1939 is classified, perhaps derisively, as a "Post-Vintage Thoroughbred".

Yet most of these decrees already seemed dated in the 1970s and '80s, when awareness of the value of a greater range of older cars was rising rapidly. Hand-built, pioneering, and expensive road and racing cars would always be collected and cherished, but enthusiasts were now banding together simply to save the few remaining cars that had populated their own childhoods. A new-found nostalgia meant that the humblest of Dodges, Morrises, Renaults, or Fiats now had a value. Clubs were formed, magazines published, histories written, memorabilia sought and saved, all in the name of preserving a bygone era of motoring.

And as time marched forward, so new waves of cars entered the classic vista, and had to be accommodated. Japanese cars for example, once the source of prejudice among long-time enthusiasts, became antiquated and scarce, and it was consented that some of them really did stand the test of time.

For the purposes of this book, "classic" means cars made in the period after World War II until the beginning of the 1990s which itself is more than a quarter of a century ago. Beyond that, extraordinary lengths of research have brought every type of roadgoing car together within these pages. They range from the most economical to the most powerful, popular family saloons to esoteric indulgences, ugly brutes to unrivalled beauties, and from the utterly conventional to the technically adventurous.

This breadth belies the truth behind the "classic" label. Besides the unmistakable fact that a car needs to be old and rare enough to evoke surprise and reawakened affection, what makes a classic is ultimately subjective. The criteria are different in the minds of each and every car enthusiast; as personal as their taste in music, food, art, or partner. This fact is reflected in the extent and scope of this book. There is not a car here that someone, somewhere, would not want to own and drive, or simply to possess, perhaps restore, and feel proud of its historical significance. Of course, there are many more that would cause frenzied bidding among collectors at an auction. There are cars that, perhaps, you have owned yourself, or wanted to own, or which still resonate for their looks, their features, their performance, or their ability to sum up a time, a place, a journey. All of them have their place in the classic car firmament - they have played their individual parts in the long and complicated evolution of the car.

"Everyone **dreams** of driving a **Ferrari**; it was my **intent** from the **start**"

ENZO FERRARI

The classic car world is enormously wide and varied. At its heart are owners who have made it their passionate business to preserve cars that might otherwise have long ago been destroyed, once their usable life had petered out. All over the globe, there are hundreds - if not many, many hundreds - of individual owners' clubs, each catering to a single marque - sometimes, even, a single model. The clubs provide the support, camaraderie, and expertise that make the labour of love required to restore and run a classic car a realistic prospect.

The restoration process usually begins when a car reaches the end of its useful life. Most cars, after several owners and maybe more than 100,000 travelled miles, are sold at their scrap values. The good news for the environment is that about 85 per cent of a typical car can be recycled. But for a car with classic status – by dint of age or merit, or both – this is just the beginning of a new, regenerative process. Life is about to start again.

Every enthusiast dreams of stumbling across a classic in a barn or lock-up garage. Yet most will come from adverts online or in the back of the many classic car periodicals that continue to defy the decline of print media. Dealers and auctions are also key sources. Locating all the necessary spare parts is another matter entirely. They will usually need to be sourced through a mixture of personal contacts, autojumbles (fleamarkets of used car material), and tips from the wider community.

For very old cars, or specialist sporting models, the road to recovery is relatively simple. The cars should - in theory at least - come apart easily because the body panels are bolted to the separate chassis frame. There is usually still plenty of corrosion to repair, among a hundred other tasks, but it will be relatively

logical. For a monocoque car - where there is no separate frame as the structure of the car is welded into one piece - things are harder, but still possible with skill and patience.

The rebuilding of an engine and gearbox is often a trickier activity. Technically minded owners relish taking such tasks on themselves; for others, there is an entire industry devoted to painstaking mechanical refurbishment. In many cases, highly experienced specialists have had to learn how to remanufacture long-obsolete parts – originally turned out in their thousands by thundering machinery – by hand and eye.

Repainting a car demands an entirely different skill set, as does working with wood and leather to recreate period interiors with all the attention to detail of the best antique restorers. Fortunately, many of the oldest cars carry exemptions from emissions rules and regulatory inspection, which mean they can still be used on today's roads, often with zero-rated levels of tax. Cover against loss or accident can be very cheap, as insurers know that classic car owners are the drivers least likely to be reckless with their precious possessions.

Once the work is complete, the rewards are there for the taking. Classic car owners love to show off the fruits of their labours and share the joy. Devotees make the pilgrimage to classic car shows where debate over a car's finer points is likely to be fierce and forceful. Other events include race meetings, *concours* d'élégance – essentially, a beauty pageant for old metal – and road trips that sometimes run through several countries.

GILES CHAPMAN, EDITOR-IN-CHIEF

REVVING UP AGAIN

The 1930s had proved a tough decade for the world's car-makers, with the Great Depression following the Wall Street Crash of 1929 making it hard to sell cars built around luxury, performance, or excitement. Then, just as prosperity had returned, the world was plunged into war in 1939.

Car production around the world slowly ground to a halt as hostilities intensified, with Detroit succumbing in 1942. As an engineering-heavy industry, its car factories were repurposed for weapons,

 \triangle American motors lead the way While European car manufacturers struggled to rebuild after World War II, US car-makers, such as Cadillac launched a string of highly desirable new models.

aircraft, and armaments manufacture. Development of the motor vehicle itself - except for rugged military trucks and four-wheel-drive systems - all but ceased.

Getting started again in 1945 was slow and laborious. Many car factories had to be completely rebuilt after taking direct hits from enemy bombs, and it was mostly prewar designs that made their way down rejuvenated production lines.

The US motor industry, mostly unscathed, was quick to embrace new styling and technology that would make its Cadillacs, Buicks, Fords, and Hudsons the envy of the world. In Europe, punishing tax regimes favoured small cars, and designers made a variety of "people's cars" from scratch. By the end of the 1940s the choice was wide, with the UK's Morris Minor, France's Renault 4CV and Citroën 2CV, the Italian Fiat 500C, and Sweden's Saab 92 all vying for attention.

The UK's new high-performance cars set the pace. First the Healey 2.4-litre and then the Jaguar XK120 were vaunted as the world's fastest production car. Meanwhile, four-wheel-drive Land Rover challenged the battle-won, off-road reputation of the US's Jeep.

"Study all the possibilities, including the impossible."

PIERRE-JULES BOULANGER, VICE-PRESIDENT OF CITROËN, 1938

Key events

- ▶ 1945 The first batch of Volkswagen saloons is completed under British Army supervision.
- ▶ 1945 Renault nationalized by the French government after founder Louis Renault is jailed for collaborating with the Nazis
- ▶ 1946 The British motor industry celebrates its 50th birthday with a parade in London, and Austin builds its 1-millionth car.
- ▶ 1946 The first call is made on an in-car radio-telephone, made by Motorola.
- ▶ 1946 Mercedes-Benz receives permission from US Army occupation forces to restart vehicle manufacture.
- ▶ 1947 Motor industry legends Henry Ford, Ettore Bugatti, and General Motors founder William C. Durant die.
- ▶ 1947 Donald Healey launches his Healey 2.4-litre - at 110 mph (177 km/h), it is the world's fastest production car.
- ▶ 1948 The Land Rover is unveiled at the Amsterdam motor show.
- ▶ 1948 Citroën's 2CV brings radical new meaning to economy motoring.
- ▶ **1949** Cadillac builds its 1-millionth car.
- ▶ 1949 Jaguar's new XK120 sports car reaches 152 mph (245 km/h) in Belgium.
- ▶ 1949 Saab's first car, the 92, is released for sale to the public.

\triangle Streamlined Swede

The new Saab 92 was highly aerodynamic for its time - the body was stamped from a single piece of steel to reduce wind resistance.

Prewar Designs

During World War II car-makers turned their mass-production expertise over to manufacturing essentials for the war effort, producing everything from tin hats to fighter planes and tanks. After the war the factories had to be reorganized and retooled, and returning them to their prewar levels of car production took time. The simplest and quickest way for companies to do that was to reintroduce the models built in the late 1930s – occasionally with some mild updates. Some of these cars, or the engines and running gear underpinning them, would soldier on in restyled models for years to come.

Flat face

The Morgan three-wheelers usually hid behind their big, exposed air-cooled, V-twin engines, which were mounted at the front of the car, but the 4/4's engine was fitted under a conventional bonnet, fronted by this flat radiator grille.

Desirable drophead

Morgan built the 4/4 as an open two-seater, a four-seater, or this drophead coupé. The Drophead offered a higher standard of weather protection and a better class of luxury than the other cars, but only 41 were built.

⊳ Peugeot 402 1935

Origin France

Engine 1,991cc, straight-four

Top speed $75 \, \text{mph} (121 \, \text{km/h})$

The 402 was far more successful than most streamlined cars of the 1930s, mainly due to its low price - 75,000 were sold. Retaining a separate chassis allowed Peugeot to offer 16 body styles. It was still produced during the war, particularly in van and utility versions.

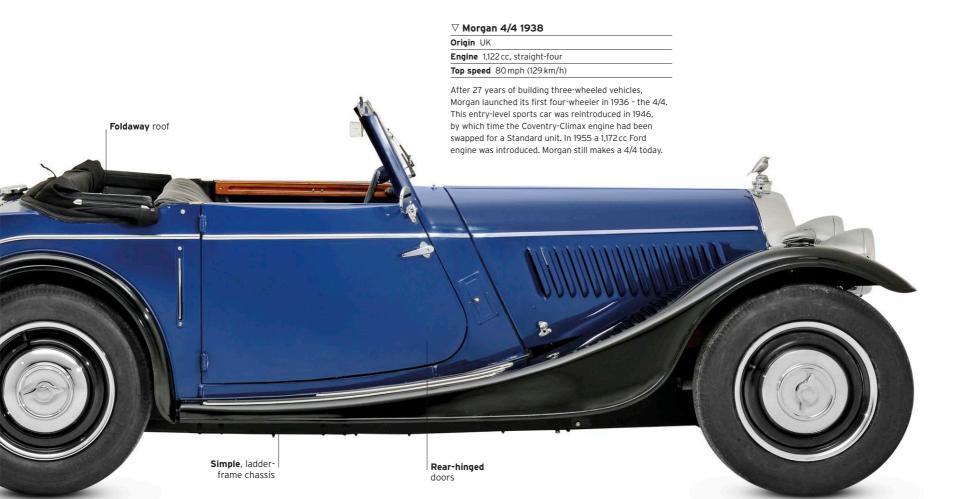

√ Vauxhall H-type Ten-Four 1937

Origin UK

Engine 1,203 cc, straight-four

Top speed 60 mph (96 km/h)

Vauxhall's entry-level car was a little bigger than its rivals and boasted a unitary construction body, independent front suspension, and hydraulic brakes. A new grille was the most noticeable change when it reappeared in 1946, but it barely lasted a year as Vauxhall's focus turned to larger cars.

⊳ Lancia Aprilia 1937

Origin Italy

Engine 1,352 cc, V4

Top speed 80 mph (129 km/h)

Probably the most advanced prewar saloon, the monocoque Aprilia had all-independent suspension, a narrow-angle V4 engine with overhead cam, hydraulic brakes, and pillarless doors. A larger 1,486 cc engine was introduced in 1939 and retained after the war. The Aprilia continued until 1949 with more than 27,000 built.

\lhd Ford Prefect E93A 1938

Origin UK

Engine 1,172 cc, straight-four

Top speed 60 mph (96 km/h)

Descended from the 1932 Model Y, and big brother to the Anglia E04A, the Prefect had an all-new body and larger engine. Reintroduced in 1949 as the E439A, with headlights moved to the wings, it was the cheapest four-door car in the UK.

as well as Jensen's Interceptor and 541.

Impressive British Saloons

Britain has always been able to make elegant, formal saloon cars that other countries simply cannot match. After World War II, the premium British car companies rebuilt and reorganized factories that had been previously turned over to war production, where they blended together the best of new and old. They maintained the traditional allure of fine wood and leather interiors, but updated exterior styling to appeal to modern taste. Straight-six and even straight-eight power units – mostly developments of their prewar products – provided effortless smoothness and refinement, while modern technology such as power steering and automatic transmission made these cars easier and more rewarding to drive than ever before.

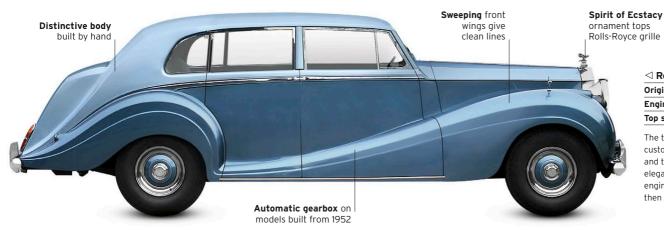

SIDE VIEW

Engine 5,460 cc, straight-eight
Top speed 83 mph (134 km/h)

This huge, post-war Daimler was supplied to seven royal families around the world, including the Windsors, but only 205 were built in eight years. It had immense presence and refinement, and weighed more than two tons. The DE36 contained the UK's last production straight-eight engine.

⊲ Rolls-Royce Silver Wraith 1946

Origin UK

Engine 4,257 cc, straight-six

Top speed 85 mph (137 km/h)

The top UK post-war, luxury car had its body custom-made, generally panelled in aluminium, and the best styles were supremely imposing and elegant. Its smooth, and virtually silent, six-cylinder engine grew in size over the years, first to 4,566 cc, then to 4,887 cc by 1959.

Origin UK

Engine 2,215 cc, straight-six

Top speed 79 mph (127 km/h)

This reliable saloon, based on the Morris Six, became the standard police car in the UK in the 1940s, used for both patrol and pursuit duties. It had a factory-supplied, heavy-duty specification, while a modern overhead-cam engine gave it faster than average performance.

Partition separates driver from rear-seat passengers

Headlights

on the wings

Origin UK

Engine 4,086 cc, straight-six

Top speed $75\,mph~(121\,km/h)$

A favourite with government ministers, the revised version of the prewar, seven-seat Pullman limousine was launched in 1948, and featured a longer chassis. Humber also produced the same car without a rear partition, designed for owner-drivers. The car was continued in Mk III and Mk IV forms until 1954.

Great Marques The Bentley Story

Today's Bentleys are some of the most lavish cars available, with a decades-long reputation as the pinnacle of the British motor car. The company's founder, Walter Owen Bentley (known as "W.O."), was an engineer who was concerned about engine performance and reliability when he began his own company in London in 1919.

BORN IN 1888, W.O. BENTLEY was apprenticed in building locomotives for the Great Northern Railway. He joined his brother in importing DFP cars from France in 1912, and his engineering background led him to modify the engines with aluminium pistons and a modified crankshaft. This made them race winners, and inspired Bentley to become a car-maker himself in 1919.

By 1921 the first car, costing £1,050, was delivered. It was the first of the 3 litres, proving a revelation in performance and mechanical refinement at a time when the typical rival was noisy and crude. It developed 80 bhp and could sustain speeds of 80 mph (129 km/h), which was quite amazing for the time in a production vehicle.

Not surprisingly, it was among Europe's most desirable sports cars. Bentleys set speed records from Brooklands to Indianapolis and were raced widely, culminating in five outright victories in the Le Mans 24-hour race in 1924, 1927, 1928, 1929, and 1930. Many of the wealthy racing drivers who loved Bentleys were part of a social set known as the "Bentley Boys". One of these, Woolf Barnato,

Bentley MkVI, 1946
Staff at the Rolls-Royce/Bentley factory at Crewe,
Cheshire give a Bentley MkVI the finishing touch; it was
the first car to carry uniform "standard" coachwork.

took control of the struggling Bentley Motors in 1926, and sanctioned a supercharged model. W.O. did not approve of it but, as he was now merely an employee, he was unable to veto the move.

Barnato was deeply involved in everything Bentley, and personally won at Le Mans in 1928 and 1929.

Driving a Bentley Speed Six, he famously raced the "Blue Train" express between Cannes and Calais in 1930, easily beating his track-bound competitor to win a £100 bet.

The "vintage" era of Bentleys was finished by the after-effects of the Wall Street Crash in 1929, and in 1931 the bankrupt company was bought by Rolls-Royce. Manufacturing was shifted to Derby, and the new Rolls-based Bentley 3.5 litre was sold as the "Silent Sports Car". In 1939 the marque moved to the Rolls-Royce plant at Crewe, Cheshire, launching the Bentley Mk VI, the new mainstay of Rolls-Royce's output, in 1946. It was the first model to have a "standard steel" body (all cars up to that time had been clothed by outside coach-builders,

as were all expensive cars) on its separate chassis.

In 1952 came the return of a really sporting Bentley, the Rtype Continental.

Advertising for the 1955 Bentley S-Series

With speeds of 120 mph(193 km/h), it had a special chassis and ultramodern aerodynamic bodywork. After that, however, Bentleys entered a very long period in which they were merely Rolls-Royces with another name, which was the case with the S series (Rolls-Royce Silver Cloud), T series (Silver Shadow), Mulsanne (Silver Spirit), and Arnage (Silver Seraph).

W.O. Bentley himself died in 1971, but the first stirrings of a Bentley revival came in 1982, when the Mulsanne received a performance-boosting turbocharger. Then came the Continental R coupé of 1991, the first Bentley for decades for which there was no Rolls version.

Bentley S2 Continental, 1959

The svelte and imposing lines of Bentley's Continental were the work of the English coach-builder HJ Mulliner of London, where the car's bodywork was handcrafted. The S2 designation signified the car's improved V8 engine.

"I wanted to make a fast car, a good car: the best in its class."

W.O. BENTLEY, TALKING ABOUT THE DESIGN OF HIS FIRST CAR, THE 3-LITRE

Bentley R-type Continental, 1952

At the time of its launch, the Bentley Continental was probably the most desirable car on the planet due to its lightweight, aerodynamic coachwork and 120 mph (193 km/h) top speed.

In 1998 Bentley and Rolls-Royce were untangled and sold off, with Volkswagen paying £500 million to obtain control of Bentley and the historic Crewe factory. Volkswagen wasted little time in rejuvenating its new subsidiary, taking advantage of shared technology that was available from its other divisions, including Audi. As a result, a new Le Mans team scored a third overall

place at Le Mans in 2001,

and yet another

breakthrough came when the company created a bespoke State Limousine for ceremonial use by Queen Elizabeth II.

Bentley's image received another boost two years later. A sophisticated new Continental GT model, with an unusual, 6-litre, W12-arrangement engine with twin turbochargers, was launched on the market. This model massively increased sales around the world; it is the mainstay of the marque in a plethora of different versions.

Mulsanne This super luxury saloon was named after a stretch of the Le Mans race circuit. The accomplished design mixed elements of Bentley's 1950s S-type with today's contemporary Continental GT style, with each of the sculptural front-wing shapes made possible using advanced aluminium superforming techniques. The engine was virtually an all-new, all-aluminium unit with 505 bhp of power and 752 lb-ft (1,019 Nm) of torque. The automatic transmission was an eight-speeder.

△ Bentley Mulsanne 2010 Each Mulsanne takes

Top speed 184 mph (296 km/h)

Each Mulsanne takes
15 weeks to build: the body
spot-welded and brazed by
hand; 170 hours alone were
devoted to the interior.

Bentayga No luxury car marque could ignore the success of the Porsche Cayenne and the Range Rover, but Bentley reached a new pinnacle, creating an off-roader with sumptuous appointments and astonishing pulling power. The W12 engine offers 531lb-ft (720 Nm) of torque through its fourwheel-drive system, making it unstoppable on rough terrain. The enormous wheels measure 22 in (56 cm) in diameter. Bentley claims no other SUV had such a range of colours, leathers, and wood veneers for configuration to suit individual tastes.

Engine 5,950 cc. W12

Top speed 170 mph (274 km/h)

Bentley describe this as a "crossover vehicle". It even includes a towbar, electrically deployed, for pulling a horsebox.

Sporting Beauties

With the motor industry hitting its stride again after the war, thoughts could turn to sports cars once again. Jaguar introduced the XK120, the fastest production car of the era, which went on to set speed records and sire successful racing machines. Ferrari, a company set up to build racing cars, turned its attention to fast road cars for the first time. Saloon car mechanicals were adapted for sports cars with traditional open-top bodies

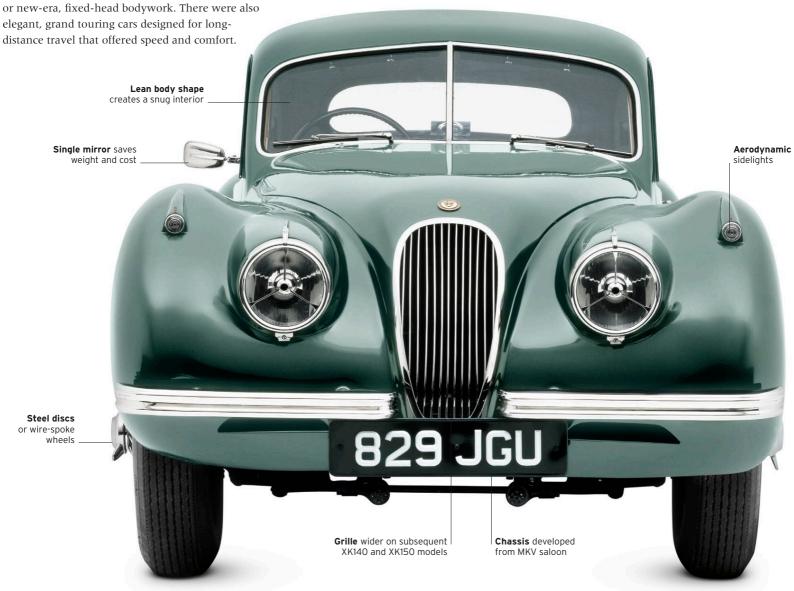

∇ Jaguar XK120 1948

Origin UK

Engine 3,442 cc, straight-six

Top speed 125 mph (201 km/h)

William Lyons' XK120 was the star of the 1948 Earls Court Motor Show in London. It was planned as a short productionrun and prestige show-stopper, but overwhelming interest meant it went into series production in 1950. Like all the best Jaguars, the XK120 combined speed, beauty, and charm.

Terrific twin-cam

Design of the XK twin-cam engine began during WWII. The 3.4-litre, six-cylinder unit was fitted with two SU carburettors and developed around 160 bhp in its production form. It also proved to have plenty of potential for future tuning.

Origin France

Engine 4,482 cc, straight-six

Top speed 120 mph (193 km/h)

The ultimate Grand Tourer of the 1940s enjoyed a wide range of fabulous coach-built bodies, with none finer than this model by Saoutchik. A lighter version won Le Mans in 1950, Louis Rosier driving all but 45 minutes of the 24 hours.

Origin UK

Engine 1,971cc, straight-six

Top speed 94 mph (152 km/h)

brakes fill the wheels

Bristol Aeroplanes entered the car market with a repackaged prewar BMW design, brought back to the UK as "war reparations". The efficient engine design gave it good performance and Bristol's standards of construction - based on aircraft engineering practice - were second to none.

⊳ Riley RMC Roadster 1948

Origin UK

Engine 2,443 cc, straight-four

Top speed 100 mph (161 km/h)

This two-door version of the 1945 RM saloon had traditional good looks and a twin-cam engine with enough power for it to hit "the ton". The Roadster had a single row of three seats and a very long tail. In total, 507 cars were made.

Front brakes

are hydraulic; rear ones mechanical

\lhd Ferrari 166 MM Barchetta 1949

Origin Italy

Engine 1,995 cc, V12

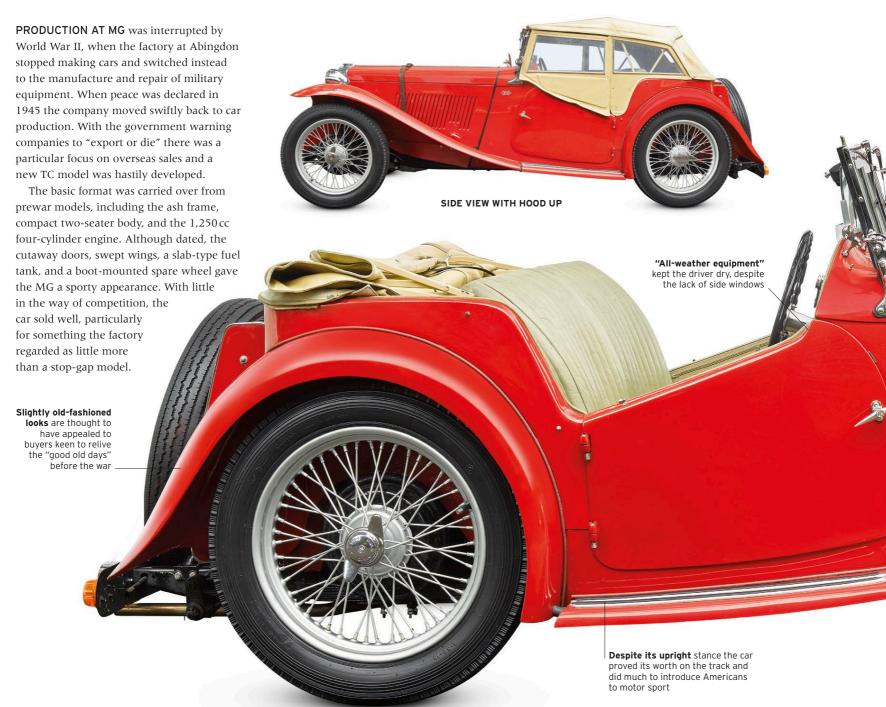

Top speed 125 mph (201km/h)

This was the first true production Ferrari sports car, powered by a high-revving V12 engine and usually fitted with a fabulous Touring Barchetta body. Ferrari was essentially a racing car manufacturer, and racing versions of the 166 won the Mille Miglia, Spa, and Le Mans races in 1949.

MG TC

Produced from 1935-55, the MG T series was a popular range of small, convertible sports cars, mostly steel-bodied on a wooden frame, and capable of around 80 mph (129 km/h). The post-war TC enjoyed particular success with sales of more than 10,000, in large part because of the car's achievements on the export market. It did especially well in the US, the open-bodied two-seater being widely credited with introducing American drivers to the concept of the small sports car.

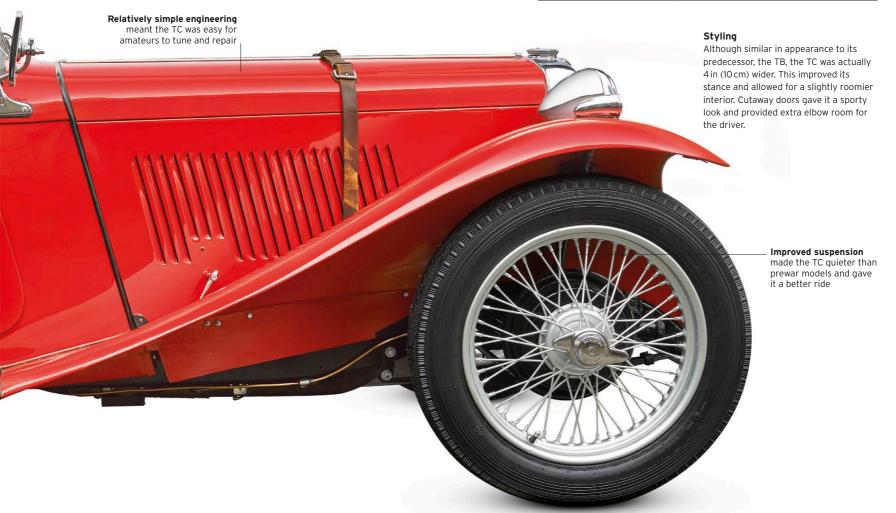

MG badge

Short for Morris Garages, the name MG was chosen by founder Cecil Kimber whose early cars were modified Morris Cowleys. By 1924 the octagonal logo featured on all cars, and many also had eight-sided dials in the cockpit.

SPECIFICATIONS	
Model	MG TC 1947-49
Assembly	Abingdon, UK
Production	10,000
Construction	Steel chassis, ash-framed steel body
Engine	1,255 cc, straight-four
Power output	54 bhp
Transmission	4-speed manual
Suspension	Front and rear leaf springs
Brakes	All-round drums
Maximum speed	73 mph (118 km/h)

ON THE ROAD

The fact that it was essentially a post-war machine with prewar looks did little to dent MG sales when it was new, and decades later it serves only to enhance the already considerable appeal of the sprightly TC.

It may not be a vintage car but it certainly looks like one, and perhaps that is the point. The performance of these little MGs was always modest but even now they cry out to be driven. Most at home perhaps driving leisurely along narrow country lanes, it's not hard to see why people flocked to buy them in the 1940s. Seeing one now – parked outside a village pub, or by an ivy-clad castle ruin – its simple but stylish shape is still pretty hard to resist.

3. Wing mirror is an essential modern addition 4. Leather strap secures the bonnet closed 5. Rear spare mounted on slab-type fuel tank 6. Improvised fold-flat windscreen 8. Beautiful art deco-style dashboard 9. Passenger

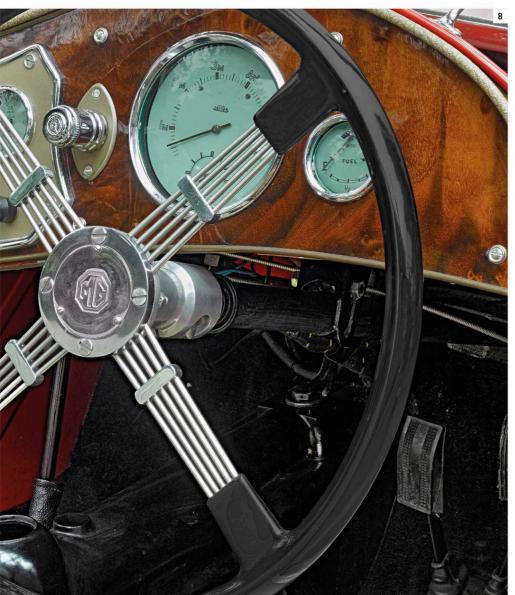

Great Marques The Fiat Story

Fiat (Fabbrica Italiana di Automobili Torino, or the Italian Car Factory of Turin) was founded on 11 July 1899, by Giovanni Agnelli, and quickly established itself in almost every automotive sector. Its speciality in small cars began in the 1930s, and continues today. The company has owned Ferrari and Lancia since 1969, Alfa Romeo since 1984, and Maserati since 1993.

FIAT BUILT ITS FIRST CAR, the 4 hp, in 1900, and in that year production averaged one car every two weeks. The impetus for growth came in 1903, however, when the company joined the Italian stock market and began manufacturing commercial vehicles. These found a ready market.

By 1906 Fiat's car range encompassed models extending from a modest 8 hp to a powerful 130 hp. Before long, its output was to include trams and marine engines.

Well before the outbreak of World War I (for which it produced aero engines and 20,000 lorries)

Fiat was chasing the middle-class buyer with its affordable Zero model. In 1916 the company began construction of its enormous Lingotto plant outside Turin. With its rooftop test track (made internationally famous in the 1969 film The Italian Job), the Lingotto plant was the source of the big-selling 501 economy model, which was introduced in 1919.

Poster advertising

In the 1920s Fiat

launched the 519 luxury car, and broke new technical ground by pioneering mass-produced, aluminium cylinder heads. Starting in 1927 the company began switching all of its cars from right- to left-hand steering, and in 1929 the 514 became Fiat's mainstream model.

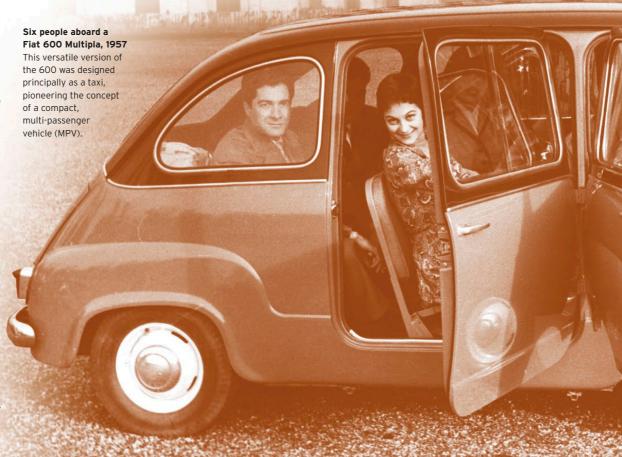

Following on from many cars launched during the early 1930s, including the 508 Balila family car and the aerodynamic 1500 saloon, Fiat introduced its baby 500 Topolino in 1936. It was designed by Dr Dante Giacosa and had a tiny, four-cylinder engine at the front. Its cheeky character earned it the nickname "Mickey Mouse".

With two large factories at Lingotto and the newly built Mirafiori assembly site, Fiat was swiftly able to rebound after World War II, with a revised 500, the 1100, and 1500. With the debut in 1953 of the new, overhead-camshaft engine in the accomplished 1100 saloon, everyday Fiats gained a reputation for responsiveness (it also briefly made a supersports car, the 8V of 1952).

Such responsiveness was less notable in the ponderous 1400, Italy's first diesel-powered passenger car. Nonetheless it formed the basis of the Seat 1400, built under licence in Spain by car-makers SEAT (Sociedad Española de Automóviles de Turismo), helping Spain join the list of major car-making nations.

In 1955, once the Italian government had committed to a major road-building programme, Fiat launched the 600 economy car, with its engine at the back. It was followed in 1957 by the immortal Nuova 500 city car, which also had its engine an air-cooled twin - mounted in the rear. These vehicles would prove hugely popular throughout the 1960s, raising annual output from 425,000 to 1.7 million cars. Many small Italian sporting marques, especially Abarth, relied on Fiat for hardware, and this boosted the zesty reputation of Fiat's cars still further.

The 1966 Fiat 124 saloon was a popular model and sold strongly. It formed the basis of the first VAZ/Lada in Russia, while in 1968 the 128 was the

"A design of considerable flair offering good economy and performance at a sensible price."

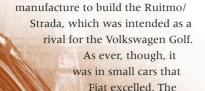

AUTOCAR MAGAZINE IN MARCH 1977 ON THE FIAT X1/9

company's first front-wheeldrive model; the spin-off 127 was among the first hatchback "superminis". All three garnered European Car Of The Year awards. Meanwhile, the Fiat Dino sports cars used Ferrari engines, and the Fiat 130 was a new, large executive saloon and coupé. In 1976 Fiat opened a major new research

centre, and in 1978 introduced robotized

box-shaped

Panda of 1980 was followed with the '83 Uno - a superlative family hatchback with global sales that exceeded 8 million. The car was later succeeded by the Cinquecento and Punto, while Fiat introduced the first direct-injection diesel engines (1987), first common rail diesel (1997), and first automated manual transmission (1999).

After almost 50 years at Fiat's helm, Giovanni Agnelli died in 2003, his brother Umberto a year later. Then, in 2009, by signing a strategic alliance, Fiat became an unlikely saviour of the American car-maker Chrysler. The two companies had both withstood rollercoaster fortunes, but their futures were fused together in 2014 when Fiat-Chrysler Automobiles was formed, with the Agnelli family owning almost one-third of the merged carmaking giant, the world's seventh largest.

Fiat Panda Mk 1, 1980

With styling input from automotive design and engineering company Italdesign, the Panda actually made boxy practicality desirable, and was very economical to drive.

CLASSICS OF THE FUTURE

Barchetta Fiat's 1200, 1500, 124, and 850 Spiders from the 1950s-70s with this mainstream marque had a solid reputation as being delightful sports cars. From 1972 they were boosted by the midengined X1/9. The company returned to the genre with this beautifully styled roadster, only this time it was given a front-wheel-drive Punto chassis. As with other Fiat sports cars, the assembly was carried out by a coach-builder, in this case Maggiora, but it was always a much rarer car than either the market-leading Mazda MX-5 or the MGF.

△ Fiat Barchetta 1995

Origin Italy

Engine 1,747cc, straight-four **Top speed** 124 mph (200 km/h) Barchetta means "little boat" in Italian. This open-top two-seater offered types of road surface.

Abarth 500 Fiat belatedly followed the new Volkswagen Beetle and BMW-sponsored Mini in the trend for classic revivals, turning its Trepiùno Concept car into the New 500 in 2007. Based on the Fiat Panda/Ford Ka platform, it was instantly successful, with its compact dimensions, "wheel at each corner", painted-metal interior, and stubby charm. A year later, Fiat re-established Abarth as a separate marque, making this the home of sports-orientated 500 models.

American Trendsetters

US car-makers big and small kept buyers interested in the latest models by accelerating the introduction of bold, new, full-width styling and by updating designs annually as the 1940s wore on. Pioneering technical advances, such as automatic transmission, made American cars easier to drive, while big six-cylinder and V8 engines used ever greater quantities of fuel, which was cheap and abundant, to provide more power and refinement than ever before. This was an era of change in the industry, with big conglomerates increasingly dominating the market and selling cars for prices that smaller companies were unable to match.

FRONT VIEW

Cadillac crest

The Cadillac company was named after Frenchman Antoine Lamet de La Mothe, sieur de Cadillac, the founder of the city of Detroit. The imposing emblem on the front of the car was based on his coat of arms.

Fantastic fins

The subtle fins of the Series 62's were merely the beginning. Fins grew and grew over the next few years, reaching their maximum at the end of the 1950s.

abla Cadillac Series 62 Club Coupé 1949

Origin USA

Engine 5,424 cc, V8

Top speed 92 mph (148 km/h)

General Motors' 1948 body design featured tailfins inspired by the Lockheed P38 Lightning fighter plane. After ten years in the making, 1949 saw the introduction of a sophisticated new OHV engine. Smaller and lighter than its predecessor, it delivered more power and achieved better fuel economy.

ightharpoonup Hudson Super Six 1948

Origin USA

Engine 4,293 cc, straight-six

Top speed 90 mph (145 km/h)

One of the few small firms in post-war US car production, Hudson excelled with its low-built "step down" 1948 models and powerful new Super Six engine. In 1951 the Super Six evolved into the Hudson Hornet, which dominated American stock car racing from 1951-54.

□ Ford Custom V8 1949

Origin USA

Engine 3,917 cc, V8

Top speed $85\,\text{mph}$ (137 km/h)

Ford's new styling arrived in 1949. It was clean, low, modern, and boxy - features that were soon seen on European Fords, too. Power came from developments of two prewar engines: an L-head straightsix, and the famous Flathead V8.

▶ Pontiac Chieftain Convertible 1949

Origin USA

Engine 4,079 cc, straight-eight

Top speed 85 mph (137 km/h)

Low, sleek, full-width bodies were the hit of 1949 at Pontiac. Chieftains could be customized with a long list of extras, including a valve radio, seat heaters, and even a Remington shaver. Power brakes and air conditioning were available later. The model continued until 1954.

Streamlined spats can be removed

Origin USA

Engine 2,779 cc, straight-six

Top speed 82 mph (132 km/h)

In 1947 Studebaker was the first big name to introduce post-war styling. By 1950 the Champion was on to its first major revision, with a longer nose, a more powerful engine, and automatic transmission. Two-door and four-door saloons, station wagons, coupés, and even convertible models were available.

Great Designers Harley J. Earl

Bombastic, chintzy, overblown - these are some of the criticisms regularly levelled at the designs of Harley J. Earl. But this undoubted overlord of 1950s' American auto styling certainly knew how to design cars that the public craved. In doing so, he created some of the most iconic models of all time, and helped turn General Motors (GM) into the world's largest corporation.

Career highlights

- ▶ 1927 Harley J. Earl designs the 1927 LaSalle for Cadillac - a huge sales success
- ▶ 1927 Earl gets his first big job, leading GM's Art and Colour Section
- ▶ 1930 The Cadillac V16 supercar is styled by Earl and Larry Fisher. It is the first production car with a 16-cylinder engine
- ▶ 1933 Earl's first "show car", the Cadillac Aerodynamic Coupé, debuts in Chicago
- ▶ 1938 The era of the dream car is launched with the Buick Y-Job

 \triangle Buick Y-Job, 1938

One of the auto industry's very first concept cars, the Y-Job, established several styling cues that would be used by Buick until the 1950s. The vertical waterfall grille still appears on the company's cars today.

- ▶ 1945 Earl sets up his own independent design firm, the Harley Earl Corporation
- ▶ 1948 Inspired by a fighter plane, the '48 Cadillac becomes the first car with tailfins
- ▶ 1953 The Corvette sports car, conceived by Earl, reaches production
- ▶ 1954 At GM's snazzy Motorama roadshow, the era of jet design truly takes off with the XP-21 Firebird
- ▶ 1959 Earl retires just as the extravagance of Cadillac tailfins reaches its heady peak
- **▶ 1969** Earl dies, aged 75

YOU COULD ARGUE that car "styling" as such did not exist before Harley J. Earl. But this talented craftsman did more than merely invent the role of car stylist – he was a true pioneer whose influence can still be felt today.

The son of a coach-builder who had made a success of producing one-off, custom-made car bodies for Hollywood stars such as Fatty Arbuckle, Harley J. Earl learnt his craft at a young age, working alongside his father at Earl Automotive

Works. Indeed, he was one of the first people to use modelling clay to give physical form to his ideas.

When Cadillac's manager, Larry Fisher, saw Earl

at work, he knew instantly that he was the right man to lead the new Art and Colour Section at GM in 1927. Within a decade, Earl had been promoted to vice-president, and his department renamed the Styling Section.

DREAMS INTO REALITY

Earl had the brilliant idea of changing styling on an annual basis – a totally new concept at the time, but quickly adopted by the whole car industry. This significantly boosted new car sales at GM, further endearing Earl to the management.

Then, in 1938, Earl's experimental Buick Y-Job effectively gave birth to the "concept car". It set an auto-industry trend for show cars that exhibit new styling and technology. The Y-Job (Earl's personal car for more than a decade) had long, sleek lines, concealed headlights, and an electric folding roof.

But Earl's most famous idea was the tailfin, inspired by a Lockheed P-38 Lightning fighter plane. When fins first appeared, on Earl's 1948 Cadillacs, the "jet-age" of car design had truly begun. Earl's 1951 Buick LeSabre dream car bristled with jet-age innovation – cast magnesium bodywork, heated seats, and a roof that raised itself when a sensor detected rain. Taking the aircraft theme literally, the 1954 Pontiac Bonneville Special even used genuine Lockheed P-38 seat belts.

Chevrolet Corvette C1 publicity drawing, 1953

This sketch, showing the rear of a Corvette C1, not only gives a sense of the car's smooth, sleek appearance, but also an implied feeling of speed as it accelerates away. Just 300 Corvettes were made in the first year of production.

But for jet-age fantasy, nothing beat the XP-21 Firebird of 1954. It was powered by a jet turbine and even looked the part with its plane-inspired wings. By 1958 the Firebird III had evolved into NASA-rocket territory, with out-of-this-world fins, astronaut-style bubble canopies, and "electroluminescent" instruments.

PROLIFIC OUTPUT

This was an era of pure showmanship, embraced by GM in rolling carnivals called Motorama that toured the whole of the US. The centrepieces of these extravaganzas were always futuristic visions of a brighter, faster, bigger age. In the peak Motorama year (1956), GM spent \$10 million on the shows and attracted 2 million visitors.

Earl's output was prolific. In just one year

Earl's GM LeSabre, 1951

Designed as a concept car for GM, Earl's LeSabre inspired a fashion for jet-age styling.

CHEVROLET CORVETTE 1953

GM FIREBIRD III 1958

(1954) no fewer than 12 different dream cars were paraded in front of the public. Highlights included the Buick Centurion, Oldsmobile Golden Rocket, the knee-high Pontiac Club de Mer, Chevrolet Corvette SS, and jet-inspired Cadillac Cyclone.

Some of these Motorama "concepts" actually reached production, most famously the Chevrolet Corvette, which was an Earl product from conception to realization. America's first real sports car in the European idiom, the 1953 Corvette, was also the world's first mass-produced, fibreglass-bodied car. Many of Earl's pioneering style ideas, such as two-tone paint, wraparound windscreens, and quad headlights, appeared on GM cars before any other manufacturer's.

EARL'S LEGACY

The excesses of the tailfin era – when Earl did battle with Chrysler's Virgil Exner to see who could push things the furthest – reached their

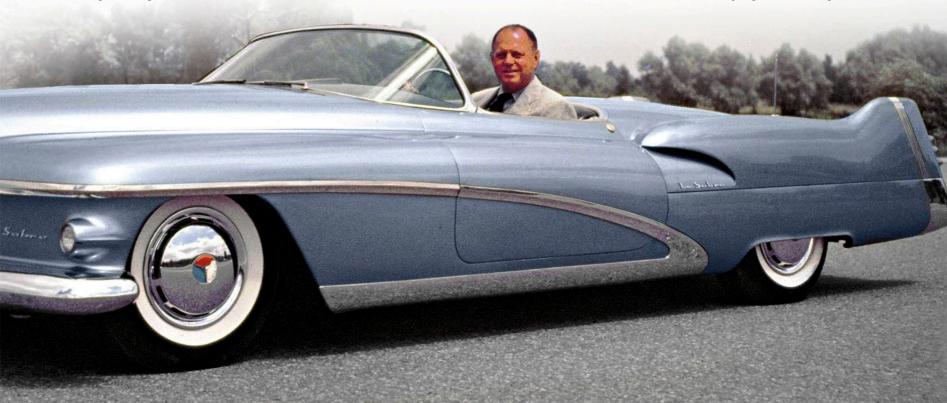

"Design and beauty not only command attention, but they are the very foundation of living."

HARLEY J. EARL

peak with the 1959 Cadillac. The '59's towering tailfins were punctuated by sci-fi rear lights and rich swathes of chrome, while at the front, the wraparound windscreen and double grille completed the car's flamboyant look.

But the excess could not last. The '59 Caddy was Harley Earl's last design for GM. He promptly retired, and handing the reins of the styling department he had built over to Bill Mitchell. With immediate effect, the era of excessive ornamentation was over.

Earl died in 1969 and his legacy cannot be overstated. Among his many achievements, he was a pioneer of promoting women stylists (his so-called "Damsels of Design"), he championed the use of crash-test dummies, and he established the Auto Design Scholarship programme. Above all, he gave cars soul, turning design into the single most important factor within the auto industry. He proved, with the numbers of vechicles he sold, that cars were not just functional transport but were also about style, passion, and aspiration.

Motoring in Miniature

Motor sport was too frivolous a hobby in occupied France, but at least these adults could enjoy the spectacle of children racing in pedal cars. Like toy cars, pedal cars had been around since the early days of motoring. They reached their height of popularity in the interwar years. Some were generic in design, but many closely mirrored real road cars of the time.

TOYS TO PROMOTE SALES

Car-makers soon realized they could exploit children's enthusiasm for cars to boost sales. In the USA during the 1930s Graham-Paige used diecast Tootsietoy models to promote the life-size cars in its showrooms. Even before that, Citroën had commissioned a

range of tinplate models of its cars to sell to the offspring of customers. Bugatti went a step further and built an electric-powered child's car, the Bébé, that was a half-scale version of its Type-35 racer. In 1949 Britain's Austin Motor Company launched a pedal-powered junior machine called the J40. Based on the design of its real-life A40, it was intended to generate interest in everything Austin sold. But there was also altruistic thinking behind the venture: it was made by disabled ex-miners, at a special factory in South Wales, on a not-for-profit basis.

A pedal car Grand Prix on the Esplanade Des Invalides, Paris, in October 1941. The cars are from the 1930s, made before wartime metal shortages.

engine unit, initially 375 cc

Austerity Motoring

Low-cost motoring had been popularized in the 1920s and 1930s by the Ford Model T in the US and the Austin Seven in the UK. In the 1940s many more small economical cars arrived to provide motoring for the masses – often using tiny, two-cylinder engines. While larger, conventional cars usually had the engine at the front driving the rear wheels, in these minicars the engine and drive-wheels were at the same end, so the transmission required less space. Though these cars served a humble purpose, their design was clever and characterful.

SIDE VIEW

Indicators were added to the rear pillars in the 1950s. An ingenious innovation, they could be seen from the front and the rear in this position, which meant that only two were needed. Simplicity was key to the design of the 2CV.

⊳ Standard 8HP 1945

Origin UK

Engine 1,009 cc, straight-four

Top speed 60 mph (96 km/h)

Standard rushed its prewar 8HP back into production in 1945, having improved it with a four-speed gearbox. The 8HP designation referred to its RAC horsepower rating, which determined its rate of road tax (the engine actually produced 28 bhp). Standard sold 53,099 examples of this model in three years.

⊲ Renault 4CV 1946

Origin France

Engine 760 cc, straight-four

Top speed 57 mph (92 km/h)

Renault's small car, the 4CV, looked similar to its British rival, the Morris Minor. However, with all-independent suspension and a rear-mounted engine under the skin, it had more in common with the German Volkswagen. It was the first French car to sell more than a million examples.

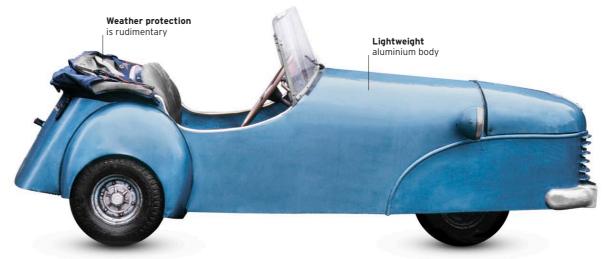

⊳ Bond Minicar 1948

Origin UK

Engine 122 cc, one-cylinder

Top speed 38 mph (61km/h)

Bond's three-wheeler Minicar was cheap to run, inexpensive to tax, and could be driven by anyone who had a motorcycle licence. The simple design featured an air-cooled motorbike engine that pivoted with the front wheel and had no reverse gear.

√ Fiat 500C 1949

Origin Italy

Engine 569 cc, straight-four

Top speed 60 mph (96 km/h)

This was the final version of Dante Giacosa's brilliant 1937 "Topolino" (Little Mouse), which mobilized the population of Italy in the 1930s. Like the earlier cars, the 500C of 1949 had only two seats, and a front-mounted, four-cylinder engine. Coupé, cabriolet, estate, and van versions were made.

Extended station

with French buyers

wagon model popular

⊳ Renault Juvaquatre 1945

Origin France

Engine 1,003 cc, straight-four

Top speed 60 mph (96 km/h)

This was the estate version of Renault's first monocoque-construction, mass-market model. It was conventional and basic, with only three gears and mechanical brakes. The estate and saloon were dropped in 1948, but a van was still on sale as late as 1960.

∇ Citroën Traction Avant 15CV 1938

Origin France

Engine 1,911cc, straight-four

Top speed 73 mph (118 km/h)

Citroën shook up the motoring world with its Traction Avant or "front-wheel drive" range in 1934, with the cars still setting the standard for roadholding, comfort, and driving enjoyment more than a decade later. The car designer W.O. Bentley was an ardent fan. Indeed, in various forms the 15CVs were on sale until 1957.

Headlights mounted

on wings .

Brilliantly packaged

The Citroën's front-wheel drive gave a new dimension to roadholding for 1930s', '40s', and '50s' drivers. The advanced front suspension, with a torsion bar and wishbone arrangement, helped make the driving experience both safe and smooth.

Accommodating car

Traction Avants were spacious inside, but boot space on standard saloons was restricted, especially with the spare wheel stored in the boot lid. Models manufactured for British buyers came with larger luggage space.

REAR VIEW

Peugeot 202 1947
Origin France

Engine 1,133 cc, straight-four

Top speed 62 mph (100 km/h)

Made from a combination of timber and steel, this estate version of the trusty 202 was practical, elegant, and economical. It was also an ingenious way of getting around the shortage of sheet steel in post-war France.

□ Peugeot VLV 1942

Origin France

Engine Electric motor

Top speed 22 mph (35 km/h)

Peugeot designed this tiny, battery-powered Voiture Légere de Ville or "light city car" as a response to France's petrol rationing. However, Nazi forces closed down production after only 377 had been built.

Great Marques The Citroën Story

Parisian André Citroën started business life in the gear-making industry (this is obvious in the double chevrons of the helical gears in the marque's logo). He amassed a fortune manufacturing shells in World War I and, having studied Henry Ford's car-making methods, decided to spend his earnings setting up a car company.

ALTHOUGH LATER CITROËNS would eventually develop into some of the most adventurous cars ever conceived for public sale, the original aim was a complete car at a low price.

In 1919 the Type A 10CV prototype elicited 16,000 orders because it had such an extensive specification and yet was less expensive than what most of the competition were offering. The Paris factory could barely cope with demand.

In 1922 Citroën unveiled the tiny 5CV three-seater, with its 856 cc engine, aimed at the female driver on a limited budget. It was very user-friendly, the need for a starting handle obviated by an electric starter motor, and came in vivid colours. Sales took off. André Citroën's genius as a marketer was confirmed and enhanced even further by selling toy Citroën cars, and lighting up the Eiffel Tower with 25,000 light bulbs. In a publicity stunt, the Citroën-Kegresse exploration vehicles crossed the Sahara Desert in 1922, gaining

Before long there was a huge and complex range of Citroëns. However, the company decided to hit the technical innovation trail in 1934 by launching the 7CV. It had front-wheel drive, an integrated body/chassis structure, and rakish styling by a sculptor called Flaminio Bertoni - the soon-to-be-worldfamous Traction Avant. The cost of bringing the car to market almost bankrupted the firm, and probably hastened André Citroën's death in 1935. Had he survived, he would have learned that the car drove wonderfully. And, once some of its teething troubles had been ironed out, the Traction Avant

proved to be enduringly

enormous attention.

Citroën Traction Avant

The brilliant front-wheel-drive range was in production from 1934 until 1957 in various versions. The vehicle helped establish Citroën's reputation for innovation.

popular, remaining on sale in various forms until 1957.

Citroën's next surprise was a car of its austere times, the 1948 2CV. This supremely basic, four-

door saloon had suspension so forgiving that farmers could allegedly drive their eggs to market across ploughed fields and arrive with them undamaged. The 2CV's twin-cylinder, air-cooled

> engine and front-wheel drive was unchanged throughout the car's incredible 42-year lifespan.

By contrast, the DS19 of 1955 was as daring as the Space Age itself, again the visionary work of Flaminio Bertoni. It offered both self-levelling suspension and hydraulic actuation for everything from the steering to the clutch, all in a sharklike, streamlined body unlike anything seen before.

The Ami of 1962 was an amalgam of 2CV economy and sharp DS styling.
There were also further developments on the 2CV theme, including the 1967 Dyane with its hatchback

fifth door, and the Mehari of 1968, an open utility vehicle with allplastic bodywork. In 1970, Citroën broke new ground with two new cars: the air-cooled, flat-four GS

family car – European Car of the Year for 1971 – and the futuristic SM with its 2.7-litre Maserati engine.

The 1960s and '70s were a difficult time for Citroën, which, since the 1930s, had been owned by the tyre-maker Michelin. It acquired first Panhard, the cornerstone of the French motor industry, and then five years later Maserati. But by 1974 Citroën was

nearly insolvent after ploughing money in an abandoned rotary-engine venture, which saw an undignified emergency takeover by Peugeot.

The CX, replacement for the DS, was felt to be the last "proper" Citroën. After its launch in 1974, much of the hardware inside models like the

Citroën DS23, 1973

The ultimate version of the car, the DS23 had a 2.3-litre engine that, with fuel injection, was - at 141 hbp - the most powerful

Poster, c.1927

This vivid poster extolling the virtues of properly servicing a car was typical of Citroën's enthusiastic use of marketing to promote its products.

PHILOSOPHER AND WRITER ROLAND BARTHES ON THE CITROËN DS IN HIS BOOK *MYTHOLOGIES*, 1957

LN, Visa, BX, and AX was shared with equivalent Peugeot models. And that, of course, meant conventionality. However, the little AX set new standards for economy, and the XM and Xantia still exuded some of that characteristic Citroën "different-ness", with their hydropneumatic suspension systems.

After some years of marketing rather bland products, Citroën went its own way with the 2009 DS3, and has since used the old DS name to launch a string of new models offering arch alternatives to other mainstream family cars.

Citroën Mehari, 1968

This plastic-bodied, open utility vehicle using 2CV mechanical parts was as chic as it was practical. Here, the advertising associated it with a relaxed, youthful lifestyle.

CLASSICS OF THE FUTURE

C6 Big, comfortable, and very different to its rivals, this was the first large Citroën since the XM vanished in 2000. The concave rear window was novel, and the profile suggested a tailgate, though the C6 had a conventional boot. It was notable for its rich package of safety features, including a lane-departure warning system, one of the first "pop-up" bonnets to help cushion a pedestrian in an impact, and a head-up instrument display. It came as a diesel as well as a 3-litre petrol engine.

\triangle Citroën C6 2005

Origin France
Engine 2,720 cc, V6

Top speed 143 mph (230 km/h)

Citroën decided to offer an idiosyncratic French alternative to German executive cars; those who owned one loved it.

C4 Cactus For many years Citroën devotees had bemoaned the loss of the quirky character that defined the company's cars. However, this entry into the compact SUV sector was satisfyingly original, with its simple interior, digital read-outs, and chunky looks thanks to a bluff nose and "Airbump" plastic panels on the sides and corners. There was nothing else quite like it on the road.

△ Citroën C4 Cactus 2014

Origin France/Spain

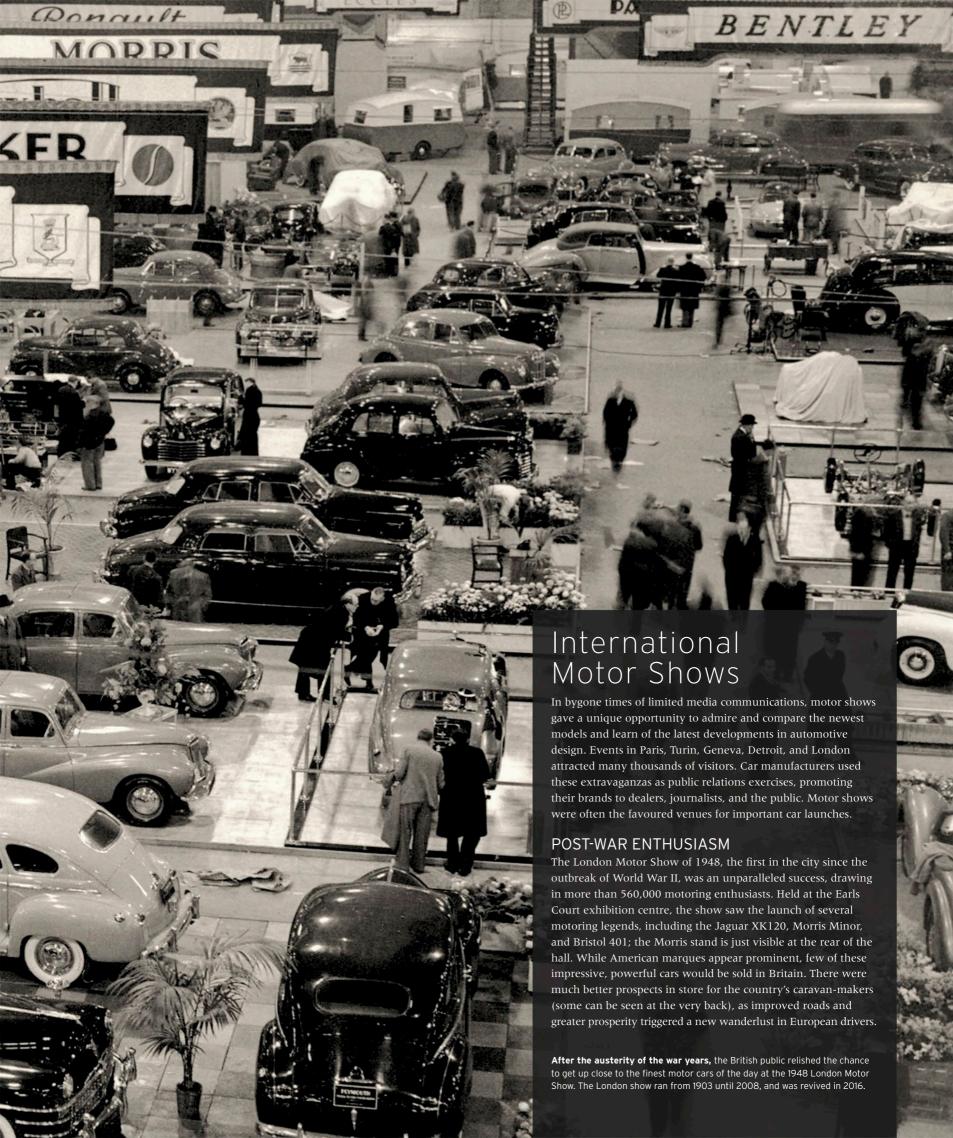

Engine 1199 cc, straight-three

Top speed 117 mph (188 km/h)

The figures were for the turbocharged version of the small petrol engine. Thanks to its 108 bhp, this basic but charismatic family car had verve to match its thrift.

Land Rover Series 1

The opening chapter of a very long success story began with a British attempt to replicate the success of the wartime Willys Jeep. Seeking to offer a similar mix of simple, bullet-proof engineering and genuine go-anywhere practicality, the original Land Rover proved wildly popular with farmers, emergency services, and off-road enthusiasts, and has become one of the most widely recognized classic vehicles on the road today.

THE BASIC SHAPE of the Land Rover has changed little since the vehicle's inception in 1948, and that was just one of the reasons enthusiasts loved their "Landies". For hardcore fans the Series 1 was the go-to model. Nothing else came close to its simple, wholly practical design.

These early vehicles were as tough as they were uncomplicated. The first boxy shape was made from an aluminium/magnesium alloy, left over from wartime aircraft production. Built with engineering technology that was designed to be easily fixed if something went wrong, its resilience made it invaluable to both the armed forces and off-road devotees.

Land Rover badge

Barely changed in decades, the oval-shaped badge was thought to have been based on a pilchard tin out of which the designer had eaten his lunch. The name, a reminder of the brand's origins as part of Rover cars, could not be more appropriate.

ON THE ROAD

The nearest the UK ever got to matching the brilliantly robust simplicity of the World War II Jeep, the Series 1 represented a complete departure for the Rover Car Company when chief designer Maurice Wilks built the first prototype on his Welsh farm in 1947. Wilks salvaged parts from an old US Army jeep, but what he saw as a new kind of small agricultural vehicle has come to be deemed a quintessentially British icon. It is this which accounts for much of its appeal to collectors. Its basic construction and deliberate lack of frills also help to make it one of the easiest machines that could be restored at home.

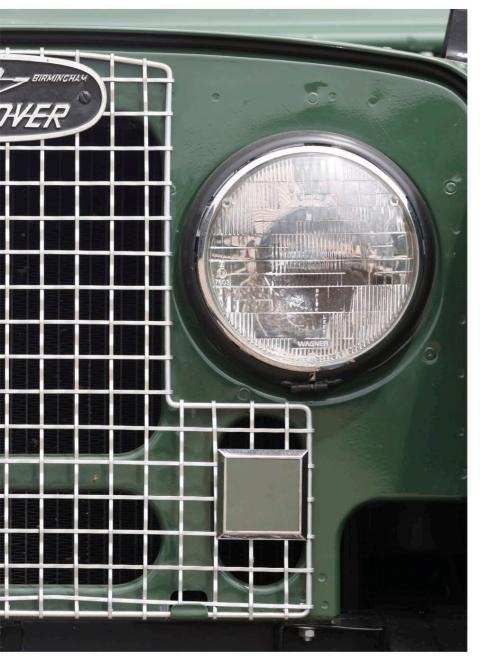

Robust bonnet catch typifies functional approach to design 2. Door handles fitted only on later models 3. Indicators are a later, legal addition
 Centrally-mounted headlights on early cars 5. Simple, three-spoke wheel
 Sparse instrumentation – earlier cars had only two gauges 7. Gear lever, four-wheel-drive selector, and low-ratio lever 8. Two-litre engine replaced 1.6-litre unit in 1950–51.

Hardworking Vehicles

Versatile, go-anywhere vehicles, such as the US military's Jeep, were initially developed for wartime use. After the end of hostilities, the Jeep found a ready civilian market in agriculture, construction, and emergency services, and some people even drove them just for fun. At the same time, the pick-up emerged as a new class of strong and adaptable purpose-built vehicle. It became a familiar part of the US automotive scene that is still very much with us today. Saloon cars were being made more practical, too, with extra seats and conversions to "station wagons" that offered plenty of space for passengers and luggage.

⊳ Willys MB "Jeep" 1943

Origin USA

Engine 2,199 cc, straight-four

Top speed 60 mph (96 km/h)

Willys, Ford, and Bantam competed for the US Army contract to build a light, four-wheel-drive reconnaissance vehicle. Willys won with the MB, and Ford also built it as the Ford GPW. More than 600,000 were made, and the US military continued to use them well into the 1960s.

Citroën 11 Familiale 1935

Origin France

Engine 1,911 cc, straight-four

Top speed $65 \, \text{mph} (105 \, \text{km/h})$

The longest of the innovative front-wheeldrive Citroëns was over 15ft (4.5 m) long with a huge turning circle. Ideal for the larger family, or as a taxi, it had three side windows and three rows of seats, and it could carry nine people.

∨olkswagen Kübelwagen 1940

Origin Germany

Engine 985 cc, flat-four

Top speed 50 mph (80 km/h)

Ferdinand Porsche's Beetle-based military transport served in all land-based fields of war, despite being only two-wheel drive. The flat underside slid over tough terrain and the engine, located over the driving wheels, aided traction. A remarkable 50,435 of these were built from 1940-45

increase body strength

Vital information

The dashboard was strictly rudimentary but it gave the driver all of the information needed to ensure that the vehicle was running properly. In addition to a speedometer, instruments included an ammeter, a fuel gauge, and engine oil level and temperature gauges.

All action, all terrain

True to its military purpose, the Jeep's interior was functional. Doors were superfluous and the windscreen could be removed. An instruction panel explained how to use the gear-shift and transfer box, and a rifle holder sat prominently behind the steering wheel.

√ Ford F Series pick-up 1948

Origin USA

Engine 3,916 cc, V8

Top speed 70 mph (113 km/h)

Ford's first all-new, post-war, product was a purpose-designed pick-up that was "Built Stronger to Last Longer". Proving an instant success, the 1948 F Series powered Ford truck sales to their best year for almost two decades. Descendants of the F Series are still going strong six decades later.

Origin USA

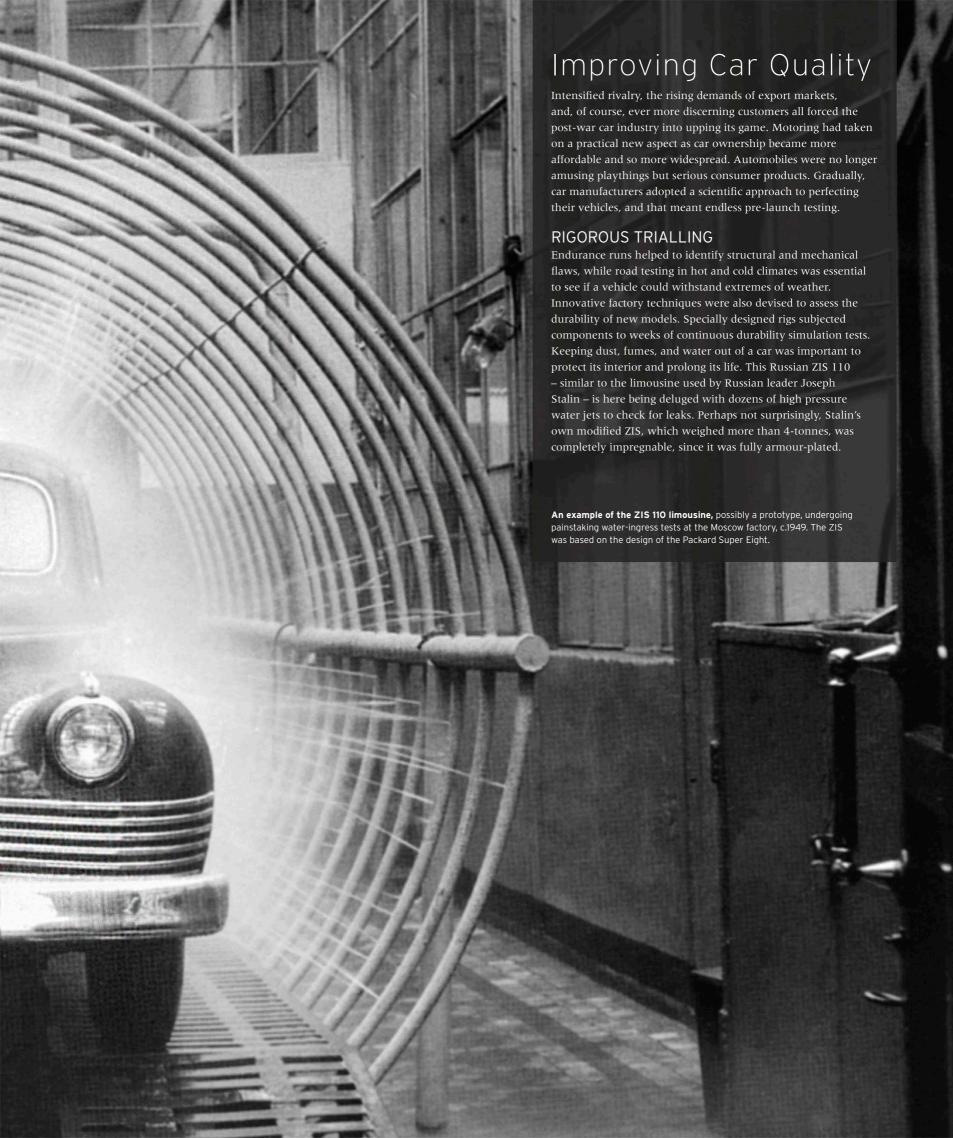

Engine 2,199 cc, straight-four

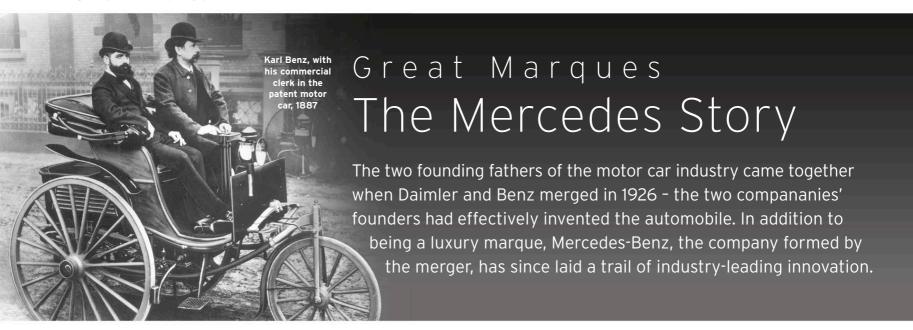

Top speed 60 mph (96 km/h))

Designed by Brooks Stevens, the Jeepster was an attempt to create a fun sports car from the basic wartime Jeep idea. It was available as rear-wheel drive only, with more equipment and chrome decoration to distance it from its utilitarian forebear. It was on sale for only three years.

THERE IS NO RECORD OF KARL BENZ (1844-

1929) and Gottlieb Daimler (1834-1900) ever having met while they were independently developing their first cars. Benz's three-wheeled "Motorwagen" was patented in Mannheim, on 29 January 1896. Its single-cylinder, four-stroke internal combustion engine ran on gas.

Cannstatt engineer, Gottlieb Daimler's, petrolpowered engine was running in 1883. He initially installed his invention in a primitive motorcycle (demonstrated for the first time in 1885) and then

> in an adapted carriage a year later. Benz was the first to sell cars to the public, in 1888, with

world's first production car, offering pivoting axles, two seats, and four wheels. However, it was the 1901 Daimler 35 hp that truly set the pattern most successful car-makers copied: a pressed steel chassis

Mercedes 220

This example of the popular "Ponton" series is shown on the runway at Frankfurt Airport in 1958.

an aluminium crankcase set in line; a gate gear-shift mechanism; foot throttle; and a steering wheel on a raked column. Thanks to its lowered centre of gravity, the vehicle was a revelation in

roadholding. Moreover, the car was marketed under the Mercedes brand, and was named after the daughter of Emil Jellinek, the brilliant sales agent who had exclusive rights to sell Daimler's

"It is a **temple** to mankind's **power** to think and imagine and **strive for progress**."

KARL BENZ, WRITING ABOUT A DISPLAY OF BENZ CARS IN THE DEUTSCHES MUSEUM, 1925

pp.56–57), held the world land speed record from 1909 to 1924, stretching it to 141 mph (228 km/h).

Benz and Porsche also pioneered supercharging

Mercedes created a range of cars in several sizes.

(1927's Mercedes-Benz SSK was the most

formidable sports car available). Meanwhile,

Mercedes-Benz S-Class, 1979

This version of the long-lived S-Class, codenamed the W126, was a paragon of both aerodynamic efficiency and occupant safety.

all-new, four-cylinder saloon with unitary construction and, soon, diesel and six-cylinder petrol options. By 1958 the firm was making 100,000 cars a year.

With its W125 the company dominated European car racing

in the 1930s. The W154 of the 1950s picked up this winning streak, giving Juan Manuel Fangio his second World Championship in 1954. The 300SL, which won the 1952 Le Mans race, went on to become the ultimate road-going sports car, the first car ever with gullwing doors and standard fuel injection. By 1955, however, Mercedes had axed its racing programme after crash debris killed 83 spectators at Le Mans. Mercedes' driver Pierre Levegh (in a 300SLR) was also killed.

In 1959 the Fintail 200/300 series, the first car to have scientifically designed crumple zones, replaced the Ponton. This standard mid-range Mercedes would be replaced in 1967, 1976, and 1985 in steady evolution.

The 190SL roadster arrived in 1955 and was popular despite its leisurely performance. Fuel injection, used in its 1963 replacement, the 230SL, made for a feistier performer. Along with timelessly broad styling, the model had a dished hardtop roof.

Highlights of the 1980s included the world-first use of airbags to the aerodynamic S-Class in 1981. A new SL in 1989 was the first car with an innovative pop-up rollover bar.

Between 1998 and 2007 Mercedes-Benz had an ill-fated alliance with Chrysler. It also acquired the Smart city car venture, brought out the A-Class Golf-size family hatchback, and revived the Maybach marque. Since 1990 the company has controlled AMG, which specializes in performance engines for Mercedes-Benz sports and racing cars.

CLASSICS OF THE FUTURE

SLK 230 Kompressor For Mercedes-Benz, the SLK roadster was a radical departure. It was, at the time, the shortest car the company had made, and it was built around a supercharged 2.3-litre, four-cylinder engine, with drive to the rear wheels. Automatic transmission was popular, but the car's main feature was its Vario roof, an electronic two-piece hardtop that folded into the boot, yet left a useful amount of luggage space.

\triangle Mercedes-Benz SLK 230 Kompressor 1996

Origin Germany

Engine 2,295 cc, straight-four
Top speed 145 mph (233 km/h)

The 1990s saw renewed interest in two-seater sports cars, and Mercedes countered the BMW Z3 with this luxury model. A 3.2-litre AMG model followed.

SLR McLaren The SLR was conceived and styled by Mercedes-Benz as a powerful touring sports car before being handed over to McLaren Automotive to engineer, develop, and manufacture; unlike other high-performance Mercedes-Benz cars, it was built in the UK. The SLR was prodigiously fast: 208 mph (335 km/h) was said to be possible. A technological tour de force, with 2,252 examples produced up to 2009, the SLR proved to be an outstandingly lucrative supercar.

△ Mercedes-Benz SLR McLaren 2003

Origin UK/Germany

Engine 5.439cc. V8

Top speed 203 mph (326 km/h)

With 617bhp, this was one of the most powerful production cars ever. The "butterfly" doors were an homage to the gullwing doors of the 1950s' 300SL.

The merged partners complemented each other well. Car manufacture took place in Stuttgart, and Mercedes-Benz in Nazi-ruled 1930s' Germany built mostly large, powerful cars, such as the 540K roadster and the "Grosser Limousine". Recovery from World War II was slow. The prewar 170V was back in production in 1946, followed by the luxurious 300 series in 1951. 1953's W120 series, known as the Ponton for its full-width styling, was an Mercedes-Benz 190SL, 1955 This two-door, luxury roadster was available either as a softtop convertible or with a removable hardtop.

With money short and fuel still rationed in many countries, long after war was over, the focus was very much on small, economical cars.

Most famous of them all was the Volkswagen, designed in the 1930s and put into full production by the British in 1945. It became a massive world-wide best-seller which remained in production for decades. But there were many more small cars, from across Europe and even in the relatively affluent US.

Each one had its own approach to providing affordable family motoring, often based on novel engineering.

> Ribbed bumpers on early models

Front and rear wings are detachable

⊳ Morris Eight Series E 1945

Origin UK

Engine 918 cc, straight-four

Top speed 58 mph (93 km/h)

A revamp of the previous model, the Series E gained an upgraded engine, a new radiator grille, and headlamps. It also lost its running boards, giving it a modern enough appearance to continue in production until being replaced by the popular Morris Minor.

Steep fastback rear end Body welded to chassis, rather than bolted on "suicide" doors

□ Ford Taunus G93A 1948

Origin Germany

Engine 1,172 cc, straight-four

Top speed 60 mph (96 km/h)

Ford of Germany built this compact family car using the same engine, chassis, and suspension as Britain's E93A Ford Prefect. They fitted their own bodies which looked more modern and were inspired by the American Lincoln Zephyr. The car reappeared after the war, in mildly modified form, as the G73A.

Engine 1,131 cc, flat-four
Top speed 63 mph (101 km/h)

Split rear

windscreen

Adolf Hitler commissioned engineer Ferdinand Porsche to design this low-cost vehicle for the German people. The rear-mounted engine was durable and air-cooled so it couldn't boil over. Production began after World War II and continued, latterly in Mexico, until 2003.

A remarkable 21 million were sold

over seven decades.

Over-riders on bumpers give minimal protection

Comfort not speed

Despite its modest engine, good aerodynamics and pared-back, lightweight construction ensured the Beetle was a capable cruiser. All-round independent torsion-bar suspension also gave a comfortable ride and reasonable handling for the day.

Compact design

An advantage of positioning the engine at the back of the car was that it eliminated the need for a heavy rear axle, reducing weight, and helping to keep the design simple. Boot space was provided at the front of the car, but was limited.

< Saab 92 1949

Origin Sweden

Engine 764 cc, straight-two

Top speed 65 mph (105 km/h)

Aircraft maker Saab gave its 92 a radical low-drag body shape and a two-cylinder, two-stroke engine, with front-wheel drive, a 3-speed manual gearbox, and a free-wheel device. The 92 and its successors, the 93 and 96, proved to be successful rally cars.

Great Designers Dr Ferdinand Porsche

Porsche is a name ingrained in sports car enthusiasts. Yet its founder, Ferdinand Porsche, was so much more than the creator of one of the world's most recognizable marques. A man of inventiveness and rare skill, he designed the Volkswagen Beetle, pioneered hybrid vehicles, and was the brains behind some of the most successful racing cars. He even chauffeured for Archduke Franz Ferdinand.

Career highlights

- ▶ 1897 Porsche designs and builds a pioneering, wheel-hub motor, which is powered by electricity
- ▶ 1900 The Lohner-Porsche is launched at the Paris World Fair. It is the world's first hybrid petrol/electric road car
- ▶ 1928 The Porsche-designed Mercedes-Benz SSK instantly becomes one of the world's greatest sports cars
- ▶ 1933 Porsche engineers the hugely successful Auto Union racing car
- ▶ 1934 Adolf Hitler's "people's car" programme is awarded to Porsche, who designs the Volkswagen Beetle
- ▶ 1948 With the Porsche 356, Ferdinand Porsche creates a new sports car dynasty under his own marque

△ Porsche 356, 1948

The first production vehicle to be built by the Porsche company, the 356 sports car was so named to indicate that it was the 356th project on which Ferdinand Porsche had worked.

- ▶ 1949 Porsche relocates to Stuttgart with his family
- ▶ 1999 Porsche is posthumously awarded the title of "Car Engineer of the Century"

DR FERDINAND PORSCHE was born in 1875 in the village of Maffersdorf, in what was then the Austro-Hungarian Empire. Even at a very young age, he was fascinated by engineering, and especially the exciting new field of electricity.

Aged 18, he decided to forego a full-time university place in order to pursue a career in electrical engineering. He joined the company Béla Egger and in 1897, despite having no formal training, built a pioneering, electric, wheel-hub motor. The concept was highly advanced and provided an energy-efficient propulsion system.

In 1898 Porsche began working at Jakob Lohner, a Vienna-based company owned by the Austro-Hungarian Army. Soon afterwards, his wheel-hub design was installed into the Lohner-Porsche – quite possibly the world's first front-wheel drive car. Exhibited at the 1900 Paris World Fair, it was an immediate success and hailed by the press as an "epoch-making innovation".

Porsche then built a second car for Lohner – the world's first true hybrid vehicle. It not only had a battery pack, but also an internal combustion engine powering a generator, which in turn fed the electric hub motors. Since there

Mercedes-Benz SSK, 1929

Capable of speeds up to 120 mph (193 km/h), the last car that Ferdinand Porsche worked on at Mercedes-Benz was also the fastest vehicle of its day, a status that guaranteed it several racetrack victories.

was a motor in each of the four wheel hubs, this amazingly advanced machine also qualifies as the world's first four-wheel drive car. However, at more than four tons (4,000 kg) in weight, it was simply too large to have a viable future.

However, Porsche entered races with this car and scored several victories. His skill as a driver was recognized when he was appointed as Archduke Franz Ferdinand's chauffeur. Luckily, Porsche was not driving the car in which the crown prince was assassinated in 1914.

Porsche had recently moved to Austro-Daimler in 1906, where he was appointed technical manager. In 1923 he made the bold decision to emigrate to Germany, working in Daimler's head office. It was here that he oversaw the famous Mercedes supercharged engine programme, which culminated in probably the world's highest-performing car of its age – the formidable Mercedes-Benz SSK sports car.

Porsche left Daimler for Steyr in 1929, only to form a new consulting company in 1931 under his own name in Stuttgart. With financial backing from the Austrian government he designed new cars for Wanderer and Zündapp.

A CAR FOR THE PEOPLE

In 1933 the German Chancellor, Adolf Hitler, instigated two projects, both of which would involve Porsche. The first was a state-sponsored

"If one does not **fail** at times, then one has not **challenged himself.**"

DR FERDINAND PORSCHE

racing car, which resulted in the Auto Union that Porsche designed. This featured a very powerful V16 engine and such Porsche innovations as a limited-slip differential.

The second project was a new German "people's car" or *volkswagen*, and it was Porsche to whom Hitler turned to lead the car's development, which he did, together with his son, Ferry. They produced a simple but effective design using a separate chassis, an air-cooled, rear-mounted engine, and a distinctively curvaceous body that would give the car its nickname (and eventual title) – "Beetle".

WAR PROJECTS

In 1938, again at the instruction of the Nazi government, Porsche designed a streamlined racing car based on the VW chassis – the Type 64 – with a tuned VW engine. This was undoubtedly a precursor to the Porsche sports car that would make the marque famous.

A legacy continues

Ferdinand Alexander
Porsche, grandson of
the company's founder, is
best known for designing
Porsche's celebrated 911. It
is testament to Ferdinand's
vision that the company has
built so many iconic cars.

However, World War II intervened in 1939, hindering progress of the VW Beetle. Porsche was diverted onto military projects, adapting the Beetle to create the jeep-like Kübelwagen and the amphibious Schwimmwagen. He also designed several tanks for the Nazis, and contributed to numerous aircraft projects.

several tanks for the Nazis, and contributed to numerous aircraft projects.

When the war ended in 1945 Porsche was requested to relocate to France, along with his factory equipment, as part of the war reparations. However, this met with several objections from the French auto industry and, Porsche was instead arrested alongside Ferry, becasue of his Nazi

racing car, the Cisitalia, which greatly impressed his father on his release. Encouraged, the pair decided to create their own sports-car marque with a car that used the Beetle's format of a rearmounted, air-cooled engine – a set-up that would not change for decades. Production of the 356 started in late 1948 in a small factory in Gmünd, Austria, but Porsche soon relocated to Stuttgart, where his empire continues to flourish today.

Ferdinand Porsche died in 1951 aged 75 before he could see the true glory years of his company, which he left in the very safe hands of his son, Ferry. Porsche senior's legacy has been widely recognized, not least by his 1999 posthumous award of the accolade, "Car Engineer of the Century". And it is hard to argue that he does not deserve it.

Great Marques The Lancia Story

Now reduced to a subsidiary of Fiat-Chrysler, Lancia's long history blended engineering innovation with style in a manner that few companies could rival. Since its creation in 1906 the Turin-based company, its cars, and drivers have enjoyed a glittering career in motor sport, particularly in recent years in international rallying.

ORIGINALLY TRAINED AS A BOOKKEEPER,

Vincenzo Lancia was a restless autodidact who quickly rose to become a chief engineer and test driver at Fiat. His driving was so impressive in fact that he was invited to race for the company, and soon earned a reputation for speed. His most notable victory came in 1904, when he thundered across the line of the 230-mile (370-km) Coppa Florio in a 10.5-litre Fiat.

With backing from friends, Lancia became a car-maker in his own right in 1906 after buying a factory from Itala and hiring about 20 staff. In less than a year their first car was up and running; but almost immediately the car and the blueprints needed to build it were destroyed in a disastrous fire. It took seven months to ready a replacement, powered by a 2.5-litre, four-cylinder engine of a novel, two-stage design.

More than a dozen of these replacement cars were built and sold; a second production model followed and by 1911, with export sales to the UK and the USA on the rise, a much larger factory was needed. Unusually for the time, the company not only built bodies for its own cars, but also supplied engine and chassis assemblies to coachbuilders, such as Locati e Torretta, Farina, and (in the UK) Maythorn.

Lancia Flavia Sport Zagato, 1963

Quirky or futuristic, depending on your viewpoint, this two-door version offered lightweight coachwork and an electrically operated rear window for ventilation. Extra power came from twin carburettors.

Lancia Fulvia HF, 1966

The HF was the most responsive version of the pretty Fulvia Coupé, with up to 132 bhp available from its 1.6-litre, flat-four engine, its lightweight body panels and glass also made for excellent handling.

Successive vehicle types in those early days were simply called Beta, Gamma, Delta, all the way through to Zeta. When the company had exhausted the Greek alphabet, a long line of cars, from the 1931 Artena to the 1972 Fulvia, then took their names from the daughters of the rulers of Ancient Rome.

Some of Lancia's best designs were among them and included several highly significant cars, such as the 1922 Trikappa with its narrow-angle V8, and a year later the Lambda, which introduced monocoque construction. Another star was the 1937 Aprilia, launched shortly after Vincenzo Lancia's death, which scored various victories, including taking five of the top six places for its class in the 1938 Monte Carlo Rally.

Vincenzo Lancia's passion for technical innovation meant that, in the early years, his cars tended to be costly and upmarket. It was 1930 before the factory addressed the issue of mass transportation, which it first did with the little Augusta. This model had a V engine, but with four cylinders rather than eight. It sold more than 14,000, an impressive total helped in no small part by its perhaps surprising popularity among racing drivers of the day.

Augusta owners included some of racing's most heroic figures such as Tazio Nuvolari and Achille Varzi, something which helped to build Lancia's reputation as a marque for enthusiasts and the cognoscenti. This reputation was to last far longer than many of its later cars perhaps warranted it and sustained the company through some tricky times. Further class wins followed in major events such as the Spa 24 Hour and the Alpine Rally, and did so even though the factory lacked a dedicated competition department until well into the 1950s. The establishment of one led the company into a brief flirtation with Formula 1 before it was decided to leave single-seater racing to the likes of Cooper, Lotus, and Ferrari.

The other big news in the mid-1950s was the decision of Lancia's widow and son to sell the firm to the millionaire, Carlo Pesenti. Having made his money in cement, Pesenti spent much of it on a wide-ranging programme of

"The Lancia is like that. It has the most winning ways. Everything about it is different."

ADVERTISEMENT FOR THE LANCIA FLAVIA

modernization and expansion. For many Lancia diehards the new company lost part of its soul at this point, but cars such as the Flavia Zagato Coupé and the Fulvia HF showed it still had plenty to offer.

Compact, light, and stylistically distinctive,

these cars are now very desirable and, while always much cheaper than the Stratos, they are also becoming increasingly valuable as collectors' cars. Throughout the same period financial imperatives required the company to produce

Lancia Delta Integrale, 1987 With its 165 bhp, turbocharged, 2-litre engine and four-wheel drive, this practical, five-door hatchback lived a double life as a rally car firebrand.

many more unremarkable machines, as well (family cars such as the Beta, Thema, and poorly named Dedra) but marque enthusiasts are happy to forget these and to concentrate instead on what Lancia did best.

CLASSICS OF THE FUTURE

Delta Integrale Evoluzione II Lancia was sold to Fiat in 1969, and it was hoped a high-performance hot hatch would recapture Lancia's earlier glory. The specialised S4 took second place in the 1986 World Championship and, keen to capitalize on this success, Lancia built a range of turbo-powered, all-wheel-drive models. The Evoluzione was fast and boxy, with widened arches and prominent spoilers. The cars did well and today find ready buyers.

\triangle Lancia Delta Integrale Evoluzione II 1993

Drigin Italy

Engine 1,995 cc, four-cylinder
Top speed 137 mph (220 km/h)

Introduced in 1993, the Evoluzione II had a more powerful engine than the previous model, producing a blistering 215 bhp. It also sported cosmetic changes

Kappa Coupé A shortened wheelbase, wider track, and frameless doors served to distinguish the coupé from its saloon sibling, but sales were slow, making this a rare beast for any would-be Lancia collector. Offered only in left-hand drive, the car used an engine from its Alfa Romeo stablemate and was styled in-house. It failed to reignite interest however, though this was as much to do with its high price as with any specific shortcomings.

 \triangle Lancia Kappa Coupé 1997

Origin Italy

Engine 2955cc V6

Top speed 137 mph (220 km/h)

Based on the executive Kappa saloon, this model was Lancia's first coupé since 1984. While praised for its sporty engine range, the styling was not popular.

Mid-Range Family Saloons

Family cars went through enormous changes in the 1940s. Separate wings, running boards, and stand-up headlamps were out, and modern, full-width styling was in. Inspiration came from the design leaders in the US motor industry, which meant car companies across Europe increasingly used chrome trim and innovated with man-made materials. Underneath, these cars varied a lot as each manufacturer aimed to produce cars best-suited to its home market. Toughness and reliability were common aims, but while some concentrated on low cost others opted for comfortable ride quality, or nimble handling.

Period styling

Origin UK

in 1950. Production lasted until 1954.

Many of the 203's design elements were typical of saloons of the era. Its headlights, which were incorporated into the bodywork not mounted externally, were just such an example.

Slender but spacious

Although tapered, the rear end of the 203 nonetheless included a wide-opening boot. It had large bumpers but absurdly small light clusters by today's standards.

▽ Peugeot 203 1948

Origin France

Engine 1,290 cc, straight-four

Top speed 73 mph (118 km/h)

The 203 was state-of-the-art. The tough monocogue body had been wind-tunnel tested to reduce drag, and the fluid suspension could smooth out the bumpiest of roads. The engine had an aluminium cylinder head with overhead valves and hemispherical combustion chambers. Almost 700,000 were sold by 1960.

Front ornament completes "razor-edge" design Spacious boot has a drop-down lid ▶ Triumph 1800 1946 Engine 1,776 cc, straight-four Top speed 75 mph (121 km/h) Standard bought Triumph in 1945, and relaunched it as an upmarket marque with sharp styling by Mulliners of Birmingham. The engine was enlarged to 2,088 cc in 1949, and a new chassis introduced when the model became the Triumph Renown

√ Volvo PV444 1947

Origin Sweden

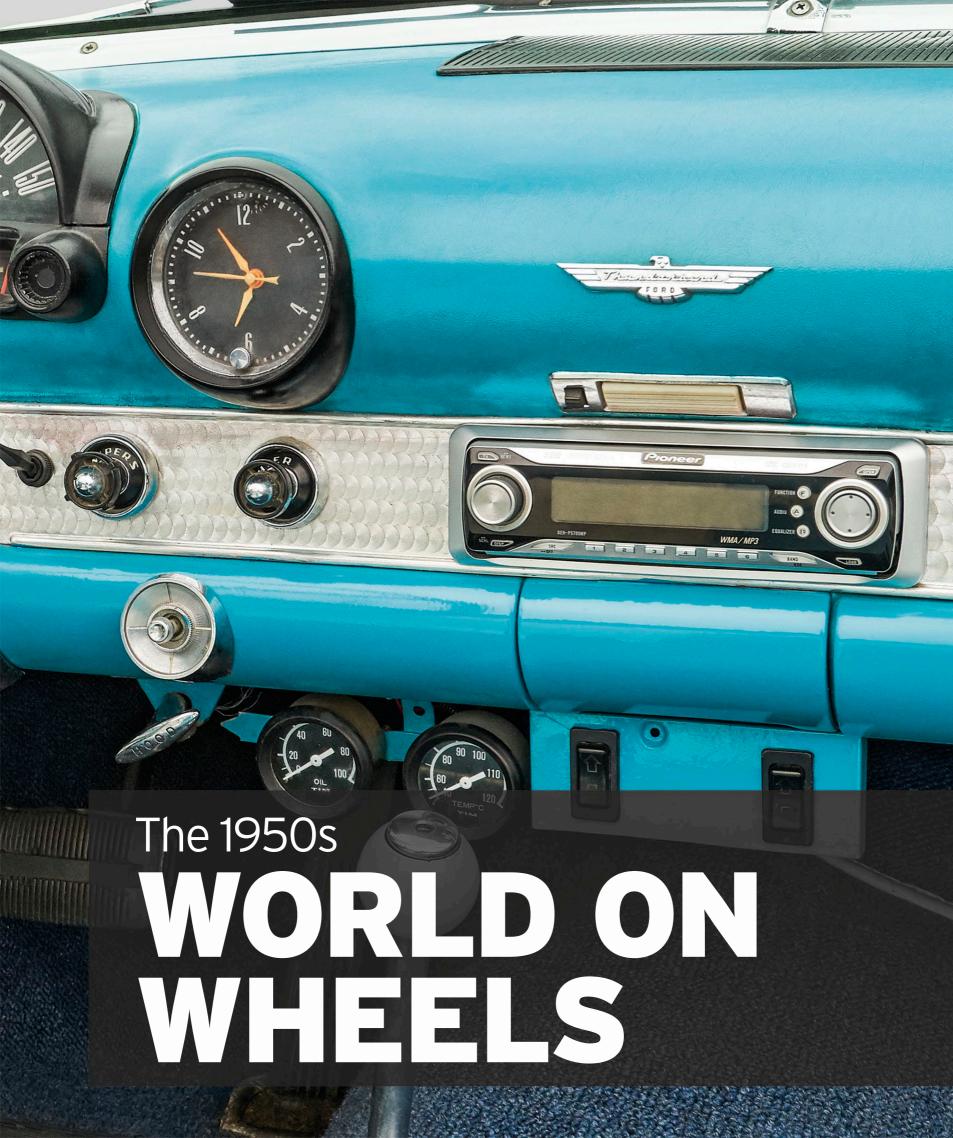

Engine 1,414 cc, straight-four

Top speed 76 mph (122 km/h)

With a monocoque body and a new overhead-valve engine, the Volvo was ahead of its time. The prototype had first been revealed three years earlier, in 1944. In 1956, the PV444 became the first Volvo to be sold in the USA, in a more responsive, twin-carburettor form.

WORLD ON WHEELS

In the 1950s the car took centre stage in daily life. Ownership was still by no means universal, but many millions of people could now realistically aspire to driving on the world's still relatively uncrowded roads, in a car they could call their own.

American car-makers embraced new technologies, unveiling cars that emphasized power, luxury, and elongated glamour. Stylists produced innovative designs that adopted aerospace imagery and chromium-

 $\triangle \ \, \text{Safety measures}$

Launched in 1959, the Mercedes-Benz W111 was the first car introduced with front and rear crumple safety zones, here being tested using a rocket-propelled sled.

plated decor in equal measure, heightening public desire in their products. Their engineering efforts focused on combining smooth operation with abundant power. The horsepower race had started with a vengeance.

In Europe, with resources still scarce and - in 1956 - the shock of a fuel crisis sparked by rising tensions in the Middle East, the emphasis was on attractive economy cars. Larger models, aimed at bigger families, were often also working vehicles, serving taxi drivers or police forces. Luxury saloons were the reserve of business leaders and government officials.

But stirring and efficient racing machines from Italy, Germany, and the UK also led to great sports cars that fused science with style. The Japanese car industry, meanwhile, was in its infancy, struggling to meet Western standards. Korea had only just got off the starting blocks; China was still predominately a land of bicycles.

Multi-lane highways around the world were shrinking journey times, but with higher-sustained driving speeds came a new concern - safety. Crash protection, braking, driver attitudes, and the cars' mechanical stamina all had some way to go to catch up with the new pace of on-road life.

"The fact is, I don't drive just to get from A to B. I enjoy feeling the car's reactions, becoming part of it."

ENZO FERRARI, LEGENDARY RACE AND ROAD CAR CONSTRUCTOR

Key events

- ▶ 1950 Rover unveils the world's first turbine-engined car, and demonstrates its jet-propelled performance.
- ▶ 1952 Lotus Engineering Company is started by Colin Chapman; Austin and Morris merge to form the British Motor Corporation.
- ▶ 1953 Chevrolet builds the first of its long-lived Corvette line of powerful sports cars.
- ▶ 1954 The age of the supercar dawns with the Mercedes-Benz 300SI, boasting gullwing doors and the world's first standard fuel injection.
- ▶ 1954 The first of Ford's Thunderbird luxury sports cruisers comes off the Detroit production line.

 \triangle **US car-manufacturing might** During the 1950s car manufacturing became the largest industrial segment in the US, with sales reaching almost 60 million cars during the decade.

- ▶ 1959 Jaguar launches the iconic Mk 2 saloon.

Great Marques The Volvo Story

As Swedish as Abba, despite being foreign-owned since 1999, Volvo has a reputation for safety. A century ago the original company made ball bearings and took its name from the Latin for "I roll". Its first cars were not built until 1926, a series of 10 pre-production models, one of which had a fabric-covered body on a wooden frame.

THE FIRST TRUE PRODUCTION Volvo appeared in April 1927, a 2-litre car of undistinguished appearance but one which the company hoped would make 1,000 sales. To begin with, engines and gearboxes were bought in from outside suppliers and sales remained modest at just a few hundred a year until a decision was made to design a new six-cylinder engine. Unique to Volvo, this entered production in 1929.

With their slightly derivative American styling, Volvos were largely restricted to the domestic market until 1947, when the launch of the streamlined PV444, two-door saloon saw it combine American glamour with smaller European proportion. By January 1956 more than 100,000 of these cars had been built, and a visit to the USA by one of the founders, Assar Gabrielsson, encouraged the idea that Volvo should build a sports roadster expressly for the American market. Unfortunately, the entire project was abandoned when Gabrielsson retired, by which time fewer than 70 of the P1900 had been produced.

Instead, success in the increasingly important export market had to wait for the 120 series Amazon. This model shared the underpinnings of the PV444 but had more up-to-date styling and revised rear suspension. The car also pioneered three-point front seatbelts, a hugely important life-saving advance, and the start of a commitment to driver and passenger safety that has never abated.

The car went on to be assembled in Belgium, Chile, South Africa, and Canada as well as at home in Sweden, and as a strong, handsome machine it set the template for future Volvo cars. Selling more than 660,000 in all, the estate version of the car proved particularly popular.

From the mid-1970s onwards, much larger estates, such as the 200, 700, and 900 series cars, became something of a trademark for Volvo. When the company decided again to try its hand with a sports car (the 1961 P1800) it even went so far as to produce an estate version, badged the P1800ES.

With a tendency to keep cars in production for many years Volvo has sometimes risked looking a little staid. The last PV rolled off the factory line as late as 1965, while the Amazon remained on sale

Volvo PV444, 1947

Designed during World War II, delays in production meant that the PV444 was considered dated from the beginning. It still proved a sales success for Volvo.

until 1970, and although sales were modest, the P1800 enjoyed a 12-year run.

The fact that Simon Templar drove a Volvo P1800 in *The Saint* television series brought a little glamour to the brand (The Who's Roger Daltrey owned one as well). Occasional forays into

motor sport also succeeded in whipping up interest, although the almost van-like 850 estate could manage only eighth place in the British Touring Car Championships in the mid-1990s.

The company also had a go at producing a coupé, the slightly odd-looking 262C Bertone, but family cars and ample load-luggers were what it did best and for years the Volvo Car Corporation built little else.

In 1999 the parent company, AB Volvo, decided to focus on trucks and therefore sold the automotive division to Ford. The news stunned many Swedes, but would bring the

Volvo 221/222 Amazon estate, 1962

This rugged load carrier brought the Swedish a well-deserved reputation as a leading make of the roomiest estate cars, for both family and business life.

"I'll keep driving my Volvo P1800. Not much will change. But whether I drive four million miles is more up to me than it is the car."

IRV GORDON

company useful economies of scale by enabling it to share components and new model development costs. In 2010, ownership switched to China's Geely.

Since then the company has gone some way to widening its portfolio, with cars like the XC90, a luxury sport-utility vehicle. The square-back Volvos of old have long gone and new cars sport a more streamlined appearance. Sales have risen

accordingly, although it is probable that where Volvo owners were once among the most brandloyal drivers anywhere, today they are more willing to consider models from Audi and BMW.

Volvo can at least lay claim to building the car with the highest mileage in the world: American, Irv Gordon, owns a 1966 Volvo P1800S with over 3 million miles (4.8 million km) on the clock.

success of the P1800, the sleek C70 was available

as both a coupé and a convertible, with the latter selling an impressive 50,000 units prior to the model's overhaul in 2006. A range of economical petrol and diesel engines were offered, too. Today the rarest C70s are those with Volvo's "signature" saffron pearl metallic paint, of which fewer than 150 were produced.

C70 Convertible Clearly an attempt to echo the

CLASSICS OF THE FUTURE

Convertible 1997

Origin Sweden

Engine 2.319 cc. five-cylinder

Top speed 155 mph (250 km/h)

friendly performance driving, combined with style and comfort. Its Roll-Over Protection System (ROPS). provided enhanced safety.

C30 T5 A further attempt at producing a compact, sports estate, the three-door C30 could be viewed as a successor to Volvo's earlier 1800ES and 480ES, but was far superior to both. In large part this was due to the multiplicity of parts and the know-how brought across from the high-performance versions of the Ford Focus, whose platform it shared. Agile with rapid acceleration, it gave other Volvos a run for their money.

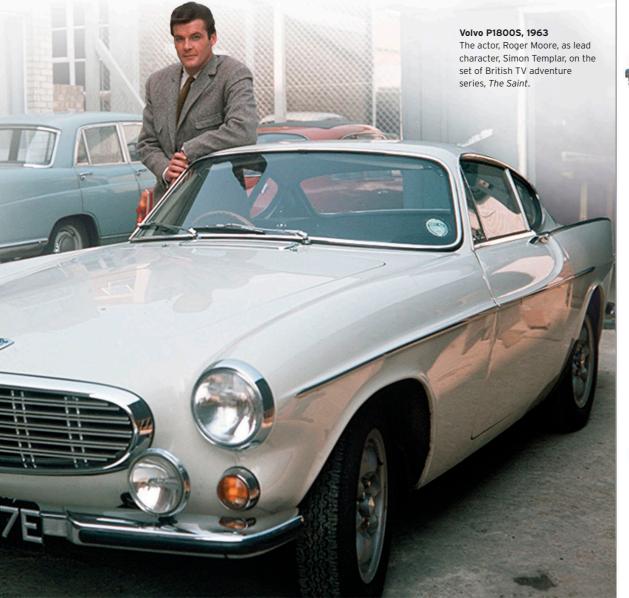

△ Volvo C30 T5 2006

Origin Belgium

Engine 2.435 cc. five-cylinder

Top speed 149 mph (240 km/h)

Volvo's entry-level coupé was compact, sleek, and nimble. With 220 bhp and three suspension settings, it was a joy to drive

Family Cars

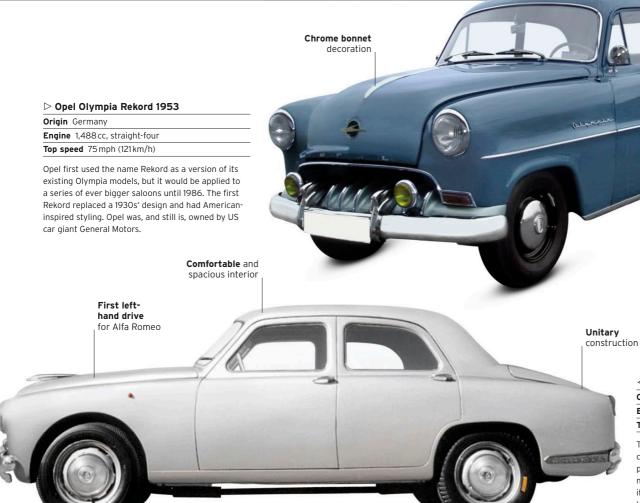

These bigger saloons were the sort of cars people aspired to, purchasing them as their children grew and their careers progressed. They were cars driven by managers rather than their staff. Rarely the most exciting models in their makers' line-ups, they were often big enough sellers and commanded a high enough price to be the first cars in their ranges to have design sophistications such as independent suspensions or all-of-a-piece bodies that did away with separate chassis frames. They were often among the first truly new vehicles produced after World War II, taking over from designs that dated back to the 1930s.

Body design

updated annually

Origin Italy

Engine 1,884 cc, straight-four

Top speed 103 mph (166 km/h)

The 1900 was the first Alfa Romeo without a chassis and the first to be engineered for mass production - older Alfas were low volume and many parts were made and built by hand. With its twin-cam engine and full-width, aerodynamic body, the 1900 was a truly modern car.

Bulging rear wing

a distinctive feature

Origin Germany

Engine 2,195 cc, straight-six

Top speed 101 mph (162 km/h)

The first Mercedes not to have a chassis, the 1953-launched 220 was still a solid and well-made car whose body found a ready market. It was popular with everyone from affluent businessmen to taxi drivers who liked the diesel versions. Six-cylinder petrols arrived in 1954, and the car sold well.

√ Volvo PV544 1958

Origin Sweden

Engine 1,583 cc, straight-four

Top speed 95 mph (153 km/h)

The first Volvo to sell in quantity outside Scandinavia, the PV544 quickly established a reputation for quality construction and a robust toughness. With its chassis-less body, independent front and coil spring suspension, it handled well too. The PV544 continued in production until 1965.

Exotic High-Performers

Many of the most iconic names in motoring came of age in the 1950s, producing cars that in some cases are still closely associated with their makers' images today. In Europe, where the hardships of World War II were still a recent memory and many ordinary cars struggled to get beyond 70 mph (110 km/h), the latest Ferraris and Jaguars with their voluptuous bodies and high-speed performance seemed impossibly exotic. Cars like this brought film star glamour to an often grey world. Some were synonymous with sporting success on the road and racetracks too, becoming symbols of national identity – and national pride.

Light yet powerful

The 2,953 cc, overhead camshaft V12 engine fitted to the 250 GT SWB was lighter than many rival power units and enabled this car to reach speeds of 168 mph (270 km/h).

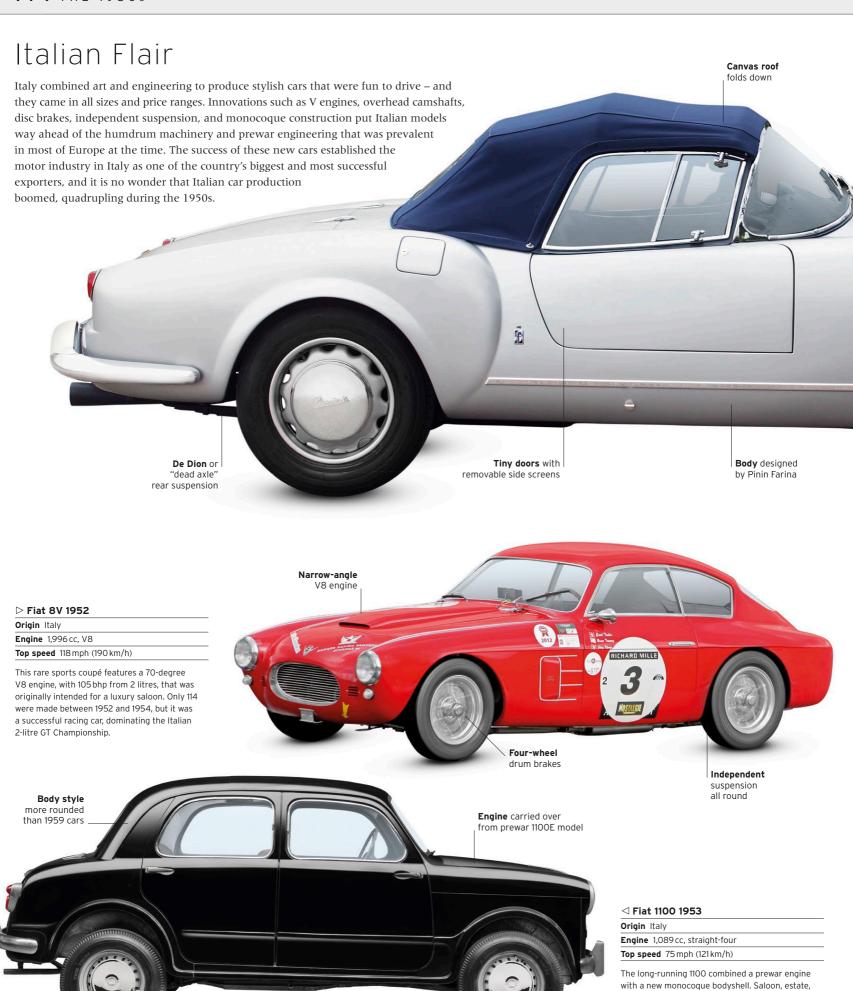

Utilitarian interior

The 250 GT SWB's elegantly functional, gimmick-free cabin was designed for the driver, with all the major controls within easy reach of the steering wheel.

vehicle-makers would adopt.

and rare drophead versions were available, and in 1959 there was a 1,221cc engine option. Production kept going until 1969, when it was replaced by the

front-wheel drive 128.

\triangledown Lancia Aurelia B24 Spider 1954

Origin Italy

Engine 2,451cc, V6

Top speed 115 mph (185 km/h)

The B24 Spider put the revolutionary production V6 engine and independent rear suspension that Lancia had first developed for its first Aurelias in 1950 into a gorgeous Pinin Farina-designed, open two-seater body with a wraparound windscreen, and distinctive rear arch haunches. Just 240 were built from 1954 to '55.

De Virgilio's V6

The Aurelia's V6 engine was designed by Francesco de Virgilio, an engineer who worked for Lancia's brilliant technical chief, Vittorio Jano, in the 1940s. There was a 60-degree angle between the cylinder banks, and the valves were operated by a single camshaft running down the V of the engine.

Left or right?

Italy had switched to driving on the right by the middle of the 1920s, and Aurelias were all manufactured in right-hand drive, as was Lancia's usual practice. In 1954 the fourth series saloons and the B24 Spider were offered with the option of left-hand drive. Of the 240 Spiders that were built, 181 were left-hand drive cars.

> Live axle with coil springs

▷ Alfa Romeo Giulietta Saloon 1954

Origin Italy

Engine 1,290 cc, straight-four

Top speed 88 mph (142 km/h)

This little brother to Alfa's 1900 saloon was a long time coming, but worth the wait. It had a monocoque body, all-alloy engine with twin overhead camshafts, and superb handling from independent front suspension and a live rear axle. Rust destroyed them quickly, but it was a delightful car when performing well.

panels used on early models

□ Lancia Appia 1953

Origin Italy

Engine 1,089 cc, V4

Top speed $75 \, \text{mph} (121 \, \text{km/h})$

Lancia's small car of 1953 copied the style of the bigger Aurelia. Its sliding pillar front suspension harked back to Lancias of old, and there was a live axle at the back, but the engine was a new, narrow-angle V4. Its high price meant sales were limited.

Great Designers Zagato

Over three generations, the Zagato family has forged a coach-building dynasty with a century-long history. A Zagato design is utterly unmistakable, characterized by extremes of shape, construction, and performance. Today the Milanese company's work - especially with prestige marques such as Alfa Romeo, Maserati, Ferrari, Aston Martin, Bristol, and Lancia - still sits in the very top flight.

Career Highlights

- ▶ 1929 The Alfa Romeo 6C 1750 is transformed into a mercurial and race-winning roadster by Ugo Zagato
- ▶ 1957 Zagato's ingenious signature "double-bubble" roof first appears
- ▶ 1962 A new factory opens in the shadow of the Alfa Romeo plant in Milan
- ▶ 1962 Zagato's new design guru, Ercole Spada, creates the utterly individual – and controversial – Lancia Flavia Sport

∧ Alfa Romeo TZ2, 1965

Zagato collaborated with the Italian team Autodelta to refine the Alfa Romeo TZ into this model, which was only used for racing competition. It had a purpose-built spaceframe chassis and a lightweight fibreglass body.

- ▶ 1974 With the release of the Zele, Zagato becomes a pioneer of electric cars
- ▶ 1989 The Zagato factory gets into full swing making the Alfa Romeo SZ
- ▶ 1996 Zagato's Lamborghini Diablo-based Raptor concept car is almost put into production as a new Lamborghini but is ultimately rejected
- ≥ 2000 Zagato enters its "neoclassical" era, rejecting mass-produced cars in favour of more "emotional" one-offs

UGO ZAGATO WAS ONE of

the first designers to apply aeronautical science to motor cars when, in 1919, he left the aircraft company he was working for to set up his own coach-building firm. Ugo proved a design pioneer, his cars scoring a string of racetrack victories for Alfa Romeo and, later in the 1920s, Scuderia Ferrari. His strength was his application of aeroplane construction techniques to sports cars, creating smooth, aerodynamic, low-weight bodies, wind-cheating wheel covers, tilting grilles, and convex boot lids. One

such design was the Panoramico body, which utilized plexiglass to maximize visibility and minimize weight.

It was Ugo's son, Elio, who truly brought the Zagato name to prominence. Having graduated from university in 1947, he immediately joined the family business as a racing driver. He built his own Gran Turismo cars and drove them to victory against the likes of Juan-Manuel Fangio and Tazio Nuvolari. Elio won 83 of the 160 races he entered and was GT series champion five times.

Zagato designed many standout cars in its glorious 1950s "GT" period, but its most distinctive innovation at this time was the "double-bubble" roof, developed jointly by Ugo and Elio, and applied to the Abarth 750 GT. This curved roof, which arched over the individual occupant's head, had a clear structural benefit: it boosted torsional rigidity. The design went on to grace dozens of Zagato's cars.

Aston Martin V8 Vantage Zagato design sketch

In 1985, this tantalising drawing was enough to make all 50 examples of this limited edition Aston Martin sell out in mere days. The revenue helped both Aston and Zagato to survive and helped establish Zagato's limited-edition business model.

Zagato produced a string of aerodynamic and elegantly lightweight coupés throughout the 1960s. Perhaps the most special of these was the Alfa Romeo Giulietta SZ. Built on the Alfa Sprint Speciale chassis and designed for competition use, it was 265 lb (120 kg) lighter than the base car and it debuted another Zagato hallmark – the "coda tronca" (cut-off tail) – which offered proven aerodynamic benefits. The TZ version that followed in 1962 was even more highly regarded.

UNMISTAKABLE SHAPES

The commercial and competition successes of the SZ and TZ, as well as Zagato-designed versions of the Lancia Appia and Flaminia, encouraged Elio

"You see that car? Is it **different** from all the others? Then **it's a Zagato**."

ELIO ZAGATO

COOLING VENT, MASERATI-A6G 1953

ASTON MARTIN DB4 GT ZAGATO 1960

Convertible Style

Convertibles added fun and a touch of glamour to the most dowdy, workaday car ranges and so were popular additions to many model line-ups. As the 1950s progressed, car-makers moved on from just chopping the roofs off their saloons to making stand-alone open models. Many were not out and out sports cars, sharing engines and many other parts with their family saloon counterparts, and providing often similarly genteel performance and handling. However they often shared some of the space and a lot of the practicality of their closed counterparts, which made them more versatile than open, two-seater sports cars.

riangledown Cadillac Eldorado 1959

Origin USA

Engine 6,390 cc, V8

Top speed 120 mph (193 km/h)

An in-house competition was held to find a name for the Eldorado, and Mary Ann Zubosky, a secretary, won. She received a \$25 "defense bond" as a prize. First launched in 1953, the car's wraparound windscreen and the tailfins of its body, styled by Harley J. Earl (see pp. 32-33) were already American car design staples.

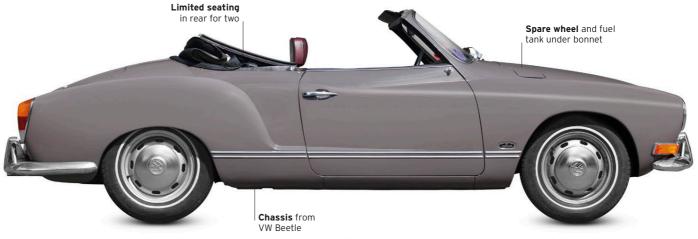

⊳ Volkswagen Karmann Ghia 1957

Origin Germany

Engine 1,192 cc, flat-four

Top speed 77 mph (124 km/h)

Improving standards of living prompted Volkswagen to consider creating an upmarket Beetle-based car (see pp. 54-55), and the result was the Type 14 Karmann Ghia. Launched in 1955, its bodywork was styled by Italian design house Ghia, and German coach-builder Karmann built it. A total of around 10,000 were sold in the first year.

Origin USA

Engine 5,440 cc, V8

Top speed 120 mph (193 km/h)

Featuring the world's first mass-produced retractable roof, the Skyliner topped the Fairlane range. It was very expensive to buy, however, and only offered limited boot space and leg room. Sales were low and production stopped in 1960 with fewer than 50,000 cars manufactured.

Tailfins stand more than 3ft (1m) from the ground

Every comfort

Stylized chrome ornaments

evoke the jet age

Designed for easy cruising, this car's equipment included power brakes and steering, and an automatic gearbox. Passengers could enjoy electric windows, powered seat adjustment, and cushion-soft air suspension.

Space for all

At nearly 18 ft (5.5 m) long, the Cadillac was huge even at a time when excess was standard. The interior seated five passengers and a driver in comfort, while the cavernous boot had space for five spare tyres.

Protruding,

dome-shaped rear lights

Stellar styling

Considered garish when it was launched, the 1959 Eldorado marked a pinnacle of design exuberance. The year after its launch, Cadillac trimmed 6 in (15 cm) off the fins of the Eldorado's replacement model.

1958

Origin France

Engine 845 cc, straight-four

Top speed 76 mph (122 km/h)

The Floride/Caravelle design was inspired by American Renault dealers. Styled by Italian design house Frua and built by French coach-builder Chausson, it used the rear-engined Renault Dauphine saloon's underpinnings. The car's limited performance improved with time. Later models even had four disc brakes.

√ Škoda Felicia Super 1959

Origin Czechoslovakia

Engine 1,221 cc, straight-four

Top speed 87 mph (140 km/h)

In 1959 when Škoda launched the attractive Felicia convertible, Czechoslovakia was a communistcontrolled country. Cars were deemed purely functional, so this model was considered decadently subversive. Mechanically it was simple and conventional. It had a separate chassis frame and, thanks to swing-axle rear suspension, crude handling.

Ford Thunderbird

With 11 distinct generations of car launched over a 50-year period, the Ford Thunderbird was not conceived as a sporty car like the Mustang, but rather as a personal luxury car. With an emphasis on style and sophistication for two rather than outright performance, it gave American buyers an entirely new driving experience and the company more than 4.4 million sales, outdoing its rival Chevrolet Corvette.

THE THUNDERBIRD made its debut in 1954, initially as a two-seater convertible that Ford hoped would rival Chevrolet's racy Corvette. With its scooping bonnet, covered, rear-mounted spare tyre, and (somewhat optimistic) 150 mph (241 km/h) speedometer, the car undoubtably had upmarket credentials, but like the early Corvettes it was never meant to be overtly sporting. While striking to look at, it used the same conventional 4.8-litre V8 as several other cars in Ford's Mercury stable.

By emphasizing the Thunderbird's comfort and luxury, Ford sold more than 16,000 cars in the first year, while Chevrolet managed to move only about 700 Corvettes.

FRONT VIEW

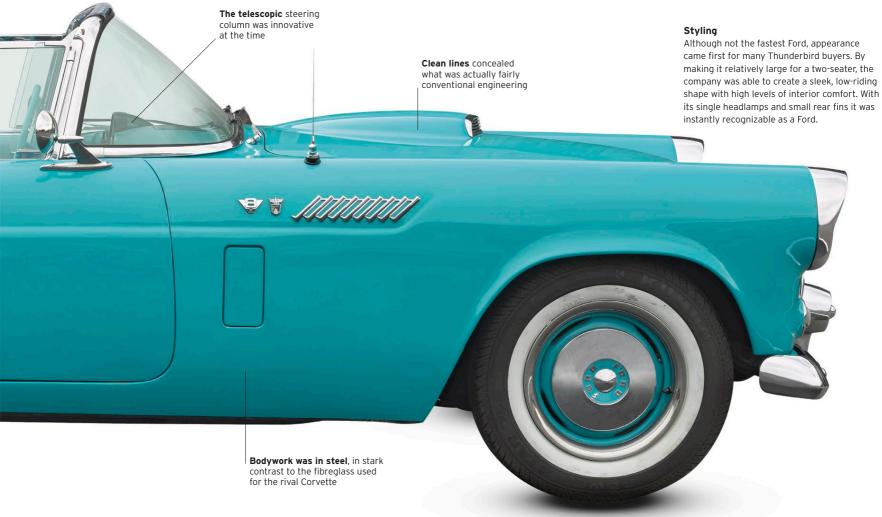

REAR VIEW

Ford badge

Originating in the deserts of the southwest, the name "Thunderbird" came from Native American legends and was proposed to Ford by young car stylist Alden Giberson, in 1954. Giberson purportedly won a \$95 suit from Saks Fifth Avenue for suggesting the name.

SPECIFICATIONS	
Model	Ford Thunderbird, 1954-57
Assembly	USA
Production	53,116
Construction	Steel body and chassis
Engine	4,785 cc, V8
Power output	193 bhp
Transmission	3-speed manual or automatic
Suspension	Front coil springs, rear leaf springs
Brakes	All-round drums
Maximum speed	115 mph (185 km/h)

ON THE ROAD

Looking back over a distance of 60 years or so, this huge car with its fins, chrome, and circular "opera" windows could scarcely look more American or be more redolent of the 1950s.

This accounts for much of its charm. As a lazy, luxurious boulevard cruiser it makes little sense anywhere except on the wide open roads of the US, but that too enhances its appeal. It suggests the owner can afford what he wants whereas the rest of us must be content with what we can afford.

Most European cars handled better, and domestic rivals such as the Corvette were markedly faster. The Thunderbird name remains highly evocative, however, and these early models still look every inch the Hollywood star.

Iconic Thunderbird name
 Chromed hood scoop hints at its V8 power
 Tiny mirrors mounted on doors
 Deep, chromed eyebrows over headlights
 V8 was always the US engine of choice
 Louvres provide a sporting accent to the sleek shape
 Lights echo period fashion for fins
 Rear-mounted 'Continental' spare
 Superb period interior
 Heater controls
 Sweeping speedometer
 Bench seat built for two

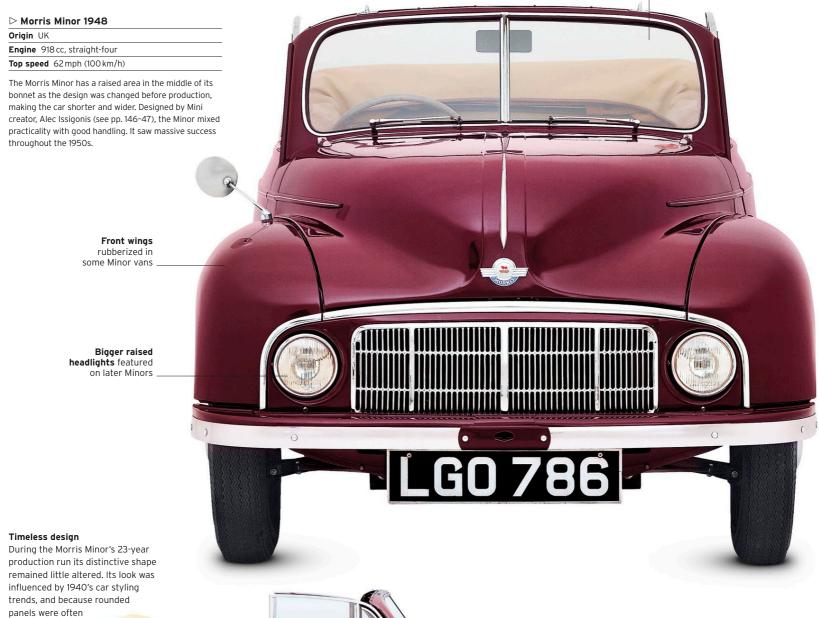

Economical Cars

The 1950s was a decade when a lot of people who had only dreamt of owning a car actually managed to do so for the first time. For some, economy was important, so they either bought something second-hand, or even ultra-frugal microcars, such as the Heinkel three-wheeled "bubble car". For most, however, a small saloon with more space for people and luggage was needed. Many of the decade's most popular small cars were rear-engined, made in their millions by the likes of VW, Fiat, and Renault, who offered their customers plenty of models and designs to choose from.

Split windscreen was later replaced by one-piece design

Flathead engine

Early Morris Minors were powered by "flathead" engines, which dated from the 1930s. They were replaced by the Austin-designed A Series engine, which remained with the car until 1971.

⊳ Ford Popular 103E 1953

Origin UK

Engine 1,172 cc, straight-four
Top speed 60 mph (96 km/h)

By 1953 the Ford Popular 103E was an antique, the basic design of which dated back to the 1930s, as demonstrated by its separate wings, rod brakes, three-speed gearbox, and side-valve engine. This did not stop Ford selling it until 1959 to buyers for whom affordability mattered more than fashion.

Nash Metropolitan 1954

Origin UK/USA

Engine 1,489 cc, straight-four

Top speed 75 mph (121 km/h)

A joint venture between Britain's Austin and America's Nash, the Metropolitan was designed to combine transatlantic style and British engineering in a compact form intended to appeal to wealthy women. To make it cost-effective, it was built using a large number of existing Austin parts.

⊳ Renault Dauphine 1956

Origin France

Engine 845 cc, straight-four

Top speed 66 mph (106 km/h)

A development of the tiny, rear-engined Renault 4CV saloon, the Dauphine kept that vehicle's mechanical layout, but put it into a larger, stylish body that resembled Renault's conventional Fregate big saloons. Despite sometimes wayward handling and rust problems, more than two million Dauphines were sold in 12 years.

\lhd Fiat 600 Multipla 1956

Origin Italy

Engine 633 cc, straight-four

Top speed 55 mph (88 km/h)

This box-shaped car could hold six people, even though its body was just 11½ ft (3.5 m) long. The engine was located at the back, and the car's front occupants sat above the front axle. A very early people carrier, it was originally conceived as a taxi.

Great Marques The Ferrari Story

The prancing horse of Ferrari has become a fixture at the very summit of automotive achievement. Enzo Ferrari's steadfast approach to speed ensured that his team became the most successful of them all in Formula 1 racing, and his company has created some of the fastest and most desirable cars ever made.

ENZO FERRARI WAS A RACING DRIVER from

Modena in northern Italy. He became a works driver for Alfa Romeo in 1920, then ran Alfa's official racing team under his Scuderia Ferrari banner from 1933. When Alfa decided to bring its racing back in-house, Ferrari was appointed racing manager, but he left instead to found his own company, Auto Avio Costruzione, which soon established itself in Maranello, where Ferrari is still based today.

After some success with Fiat-based racing cars, Ferrari launched the first car under his own name, the 125S, which went on sale in 1947. Ferrari's cars won the Mille Miglia and Targa Florio in 1948, and the prestigious Le Mans 24-hour race in 1949. Their first win in Formula 1 Grand Prix racing came in 1951, and Alberto Ascari won the F1 World Championship for Ferrari in 1952 and 1953. From there, Ferrari became a fixture in F1 racing, winning two more World Championship titles in the 1950s

with Juan-Manuel Fangio and Mike Hawthorn, and another in 1961 with American driver Phil Hill. At the same time, Ferrari won at Le Mans six times in a row to seal its place as the greatest racing team motor sport had ever seen.

But success did not come easily. Ferrari was driven by winning and did not tolerate failure.

Ferrari 275GTB4, 1966

All-independent suspension, four camshafts, and six Weber carburettors helped to make this model a fearsome road/race machine.

Detailed debriefs in the company boardroom followed every lost race, and often saw Ferrari hurl broken components across the table at startled team members. Key engineers and star drivers were often treated

with arrogant disregard. Paying customers were often treated with similar disdain. Ferruccio Lamborghini, legendarily, was so incensed by Ferrari's dismissive attitude that he started his own car company, which became one of Ferrari's biggest road car rivals. True or not, it all added to the mystique of the company and the man behind it.

"The most exciting projectile we have ever been fortunate enough to handle."

AUTOCAR MAGAZINE ON THE FERRARI 365GTB/4 DAYTONA, SEPTEMBER 1971

Ferrari 365GTS/4 Daytona Spyder

Fewer than 130 Daytona Spyders were ever produced by Ferrari. and are highly prized by enthusiasts. Cashing in on this, many hardtop 365GTBs have since been modified like this one, with the roof removed to give the appearance of a Spyder.

While Enzo Ferrari's real interest was racing, his company constructed an extraordinary reputation for its road cars. The 250 family encompassed everything from race winners to civilized GT cars, and later models, such as the 275GTB and 365GTB/4 Daytona had unmatched speed and glamour. Even then, Ferrari was too small a company to survive as an independent and an approach from the US giant Ford very nearly led to a takeover, but Ferrari pulled out at the last minute and eventually did a deal with Fiat, which took a 50 per cent shareholding in 1969.

This gave Ferrari the stability to branch out into a wider range of road cars, building on the success of the delectable 206/246 Dino to produce a profitable line of middleweight, mid-engined sports cars, beginning with the 308GTB in 1975. The top-end, high-performance machines also adopted mid-engined layouts in the 1970s 365BB and 512BB supercars, and later in their successors, the Testarossa and 512TR.

On the race track Ferrari's force had waned, but it returned to the front of the Formula 1 grids with Austrian driver Niki Lauda, who won Fl world titles in 1975 and 1977, and there was another title for Ferrari in 1979 with South African Jody Scheckter.

After Enzo Ferrari's death in 1988 Fiat took a 90 per cent shareholding in the company, and Ferrari produced more cars to higher levels of quality than ever before. But the prancing horse would suffer another lean spell in Formula 1, until the arrival of driver Michael Schumacher

and engineer Ross Brawn in 1996. They secured five driver's titles and six constructor's championships between 1999 and 2004, before Kimi Räikkönen added another driver's title to Ferrari's record in 2007.

In 2015 Ferrari was separated from its Fiat parent, and now faces the future as an independent company with what is said to be the world's strongest sports-car brand, valued at a staggering \$9.8 billion.

CLASSICS OF THE FUTURE

LaFerrari The ultimate Ferrari, and some would say it was the ultimate hypercar, of its era. Together with the Porsche 918 Spider and McLaren P1, LaFerrari marked the arrival of hybrid powertrain technology in supercars, delivering 789 bhp from its 6.3-litre, V12 engine and adding a further 161 bhp from an electric motor, with all the drive going to the rear through a seven-speed, dualclutch transmission. Only 499 were built between 2013 and 2015, and you had to be a long-standing Ferrari customer even to be invited to buy one.

△ LaFerrari 2013

Origin Italy

Engine 6,262 cc, V12

Top speed 217 mph (348 km/h)

The ultimate Ferrari - at least until the next ultimate Ferrari - combined a V12 and electric motor for exhilarating performance.

458 Speciale A The last of the V8-powered 458 family, and of Ferrari's "mainstream" naturally aspirated cars, the Speciale might one day come to be regarded as the last "old school" car from Maranello. The 4.5-litre engine revved to a spinetingling 9,000 rpm and generates 597 bhp, giving extraordinary performance: 0-60 mph 0-96 km/h) in three seconds and the top speed nudging 200 mph (322 km/h). The Speciale A adds a retractable hard top and was built as a limited edition of just 499 cars.

△ Ferrari 458 Speciale A 2015

Origin Italy

Engine 4,499 cc. V8

Top speed 199 mph (320 km/h)

The naturally aspirated engine of the 458 offered a thrilling performance. The folding roof added a further touch of glamour to the car's striking looks.

Great Designers Pininfarina

Pininfarina is one of Italy's towering giants of car design, but it was founded by someone very short - being only 5 ft (152 cm) tall, Battista Farina's nickname of Pinin, or "tiny", was apt. His design empire became a hallmark of quality and genius, as well as a significant manufacturing business - Pininfarina's Turin factory gave birth to many classic Fiat, Lancia, and Alfa Romeo sports cars.

Career highlights

- ▶ 1930 Battista "Pinin" Farina founds Carrozzeria Pinin Farina in Turin, Italy
- ▶ 1946 Design and builds the singleshelled Cisitalia, exhibited in New York's Museum of Modern Art in 1951
- ▶ 1951 A meeting with Enzo Ferrari establishes Pinin Farina as the sports car company's principal design partner
- ▶ 1958 Pinin Farina's new factory opens at Grugliasco, producing the Farina-designed Alfa Romeo Giulietta Spider
- ▶ 1961 Pinin hands over the company reins to his son, Sergio; the family name is officially changed to Pininfarina
- **▶ 1966** Pinin dies, aged 73

 \triangle Ferrari 512S Modulo, 1970

With its sleek, canopy-style roof, low, aerodynamic body, and partly covered wheels, the 512S Modulo had a futuristic look that still retained the purity of line and proportional harmony for which Pininfarina was famous.

- ▶ 1978 The company constructs a new design facility in Cambiano
- ▶ 1995 Sergio Pininfarina wins the Compasso d'Oro industrial design award
- ▶ 2010 Pininfarina manufactures its very last cars at Grugliasco - the Alfa Romeo Brera and Spider - before its factory closes down

CARS IN THE EARLY DAYS were mechanical marvels, pure and simple, and engineers left the matter of the bodywork to independent coach-builders. In Italy, one of the most famous of these was Giovanni Farina, who set up shop in Turin in 1906 expressly to coach-build wood-framed, metal-panelled car bodies.

The firm's early reputation for excellent design came to the attention of Giovanni Agnelli, founder of Fiat, who in 1911 wanted to build a mass-market car in the idiom of Henry Ford's Model T. He asked Giovanni to give the new Fiat Zero a distinctive radiator grille, and from a dozen proposals Agnelli chose one that had been created by Giovanni's 18-year-old brother, Battista "Pinin".

In 1930 Battista established Pinin Farina in a rivalry with his brother, and by 1931 had designed the first car under his own name, the distinctive Fiat 525 SS coupé. By 1939 the company employed 500 workers building 800 car bodies a year.

After World War II, Pinin realized the days of one-off, coach-built cars were all but over. His 1946 Cisitalia 202 design therefore marked an absolute revolution. With the world's very first

"full-width" body, a single shell without separate wings, the car was even displayed at the Museum of Modern Art in New York in 1951.

LASTING LINKS

By 1947 the factory was humming with the construction of stylish Fiat 1100 cabriolets, Maserati roadsters, and Cisitalia GT coupés, and in 1952 the Nash-Healey (designed and built by Farina) marked a new era of co-operation with foreign marques. Many long-lasting relationships were forged, including France's Peugeot, General Motors in the USA, and the British Motor Corporation.

However, one company stands out – Ferrari. It was in 1951 that Farina signed an agreement with Enzo Ferrari to design his cars and, following the debut of the 250 series in 1952, almost every road-going Ferrari since has been the work of Farina. The relationship became so successful that Pinin was appointed a vice-president of Ferrari, while his son Sergio joined Ferrari's board of directors. Innumerable classic Ferraris – 250s, 500s, the Dino 246, Daytona, 512 BB, Testarossa – bore Farina's famous blue "F" badge.

Cisitalia 202

Described by Arthur Drexler as "rolling sculpture", this car revolutionized post-war design by incorporating elements such as headlights, bonnet, and bumpers into the body shell.

"Purity of line and harmony of proportion. If they are good, they are good forever."

SERGIO PININFARINA

FERRARI 365GTB/4 DAYTONA 1968

SIDE STRAKES, FERRARI TESTAROSSA 1984

The frenzy of activity in the 1950s continued with a contract to design the Lancia Aurelia B20 GT, an object of fastback purity and simplicity. And when Alfa Romeo commissioned Pinin to style and manufacture a two-seater roadster version of its Giulietta, a large, new factory was opened in Grugliasco, near Turin, turning the designer into a fully fledged, production-line manufacturer.

NEW ERA, NEW NAME

In 1961, the Italian president authorized Pinin to create a new family surname and business trademark - Pininfarina. At this point Pinin handed the reins of the business to his son, Sergio; the old master died in April 1966, aged 72.

Pininfarina became a real nursery for emerging talent, nurturing brilliant designers such as Aldo Brovarone (Ferrari Superfast, Dino 206 GT, Lancia Gamma Coupé), Leonardo Fioravanti (BMC 1800, Ferrari 512 BB, Ferrari F40), and Paolo Martin (Ferrari Modulo, Rolls-Royce Camargue, Fiat 130 Coupé).

was a full-on, automated car factory, with thousands of Fiat 124 Spiders, Alfa Romeo Duettos, and Peugeot 504 convertibles rolling off the production line. In 1972 Pininfarina also opened its own full-sized wind tunnel, the very first in Italy.

The company's pure show cars were united

Family business

Sergio Pininfarina (right) discusses sketches for the Ferrari P5 Berlinetta Speciale with his brother -in-law, Renzo Carlo. The 1960's concept pioneered the use of glass screens above Ferrari's engines.

by their flowing lines and perfect proportions. Pininfarina declared its inspiration came from wind-formed Alpine snowscapes. One of the most influential designs was the Dino 206, which led directly to the Dino production car, while the later Ferrari 512 prototype also led to the wedgeshaped Berlinetta Boxer of 1973, perhaps the greatest sports car form of all time.

Pininfarina was always more interested in classical design qualities than pure fantasy, but some concept cars did push the outer limits. The futuristic Ferrari Modulo of 1970, for example, explored the extremes of sports-car design.

Its low, sculptural shape consisted of a flat, almost symmetrical arc, and it eschewed conventional doors in favour of a canopy that slid forward over the bonnet, while the Studio CNR of 1978 was an exercise in pure aerodynamics, winning the Compasso d'Oro Award in 1979 for The Ideal Aerodynamic Shape.

The Pininfarina name is a true survivor. Despite an economic climate that has swept aside almost every other design house, Pininfarina's balance of design, taste, technical research, and innovation mean the company continues to flourish today, with offices in Italy, Germany, China, and the US.

American Exuberance

For many Americans, the 1950s was a time of increased wealth and prosperity, and this was reflected in the cars they drove, which got bigger and more powerful. They had styling influenced by everything from science fiction films to space rockets and jet fighter planes, with extravagant wraparound screens and tailfins that grew bigger each year. Annual model changes used styling and spec upgrades to keep customers buying, and chrome detailing, whitewall tyres, and two-tone paint were employed to sell cars that were often mechanically simple, despite their futuristic looks. In 1950s America new cars were big, bold statements of success.

\triangledown Hudson Hornet 1954

Origin USA

Engine 5,047 cc, straight-six

Top speed 106 mph (171 km/h)

Large and aerodynamic, this saloon sat so low to the road that occupants had to lower themselves in, hence being known as "Step-downs". Despite its size, it offered good handling and power, although poor fuel economy. The car was available with two or four doors.

Poor fuel economy

at 17mph (27 km/h)

Hudson never offered a V8 engine

Optional

sun visor

ightharpoonup Oldsmobile Super 88 1955

Origin USA

Engine 5,309 cc, V8

Top speed 101 mph (162 km/h)

First introduced in 1949, the range was revised in 1954, giving it a longer, lower body with distinctive detailing, and an enlarged Rocket V8 engine. Well-equipped, the Super 88 was a mid-range model, with two- and four-door options available.

□ Chevrolet Bel Air Nomad 1956

Origin USA

Engine 4,343 cc, V8

Top speed 108 mph (174 km/h)

This model's styling, with sloping rear roofline, was inspired by a Chevrolet Corvette-based show car. The two-door Nomad was compact compared to many American cars of the period, and its sporting looks were a big departure from most utilitarian station wagons.

Studebaker Silver Hawk 1957

Origin USA

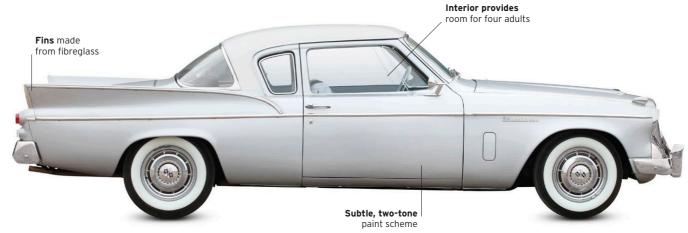

Origin USA **Engine** 6,375 cc, V8 **Top speed** 114 mph (183 km/h)

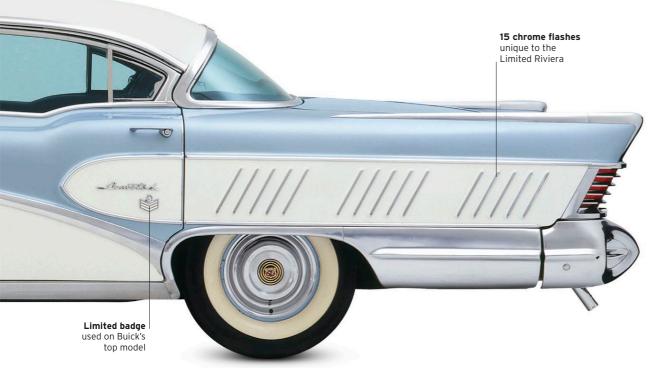

Elvis Presley and Elizabeth Taylor.

Engine 4,736 cc, V8

Top speed 115 mph (185 km/h)

The Silver Hawk offered a more restrained design than many contemporary models, with less chrome and fewer details, and sold well. It was available in two engine sizes, both offering lively perfomance.

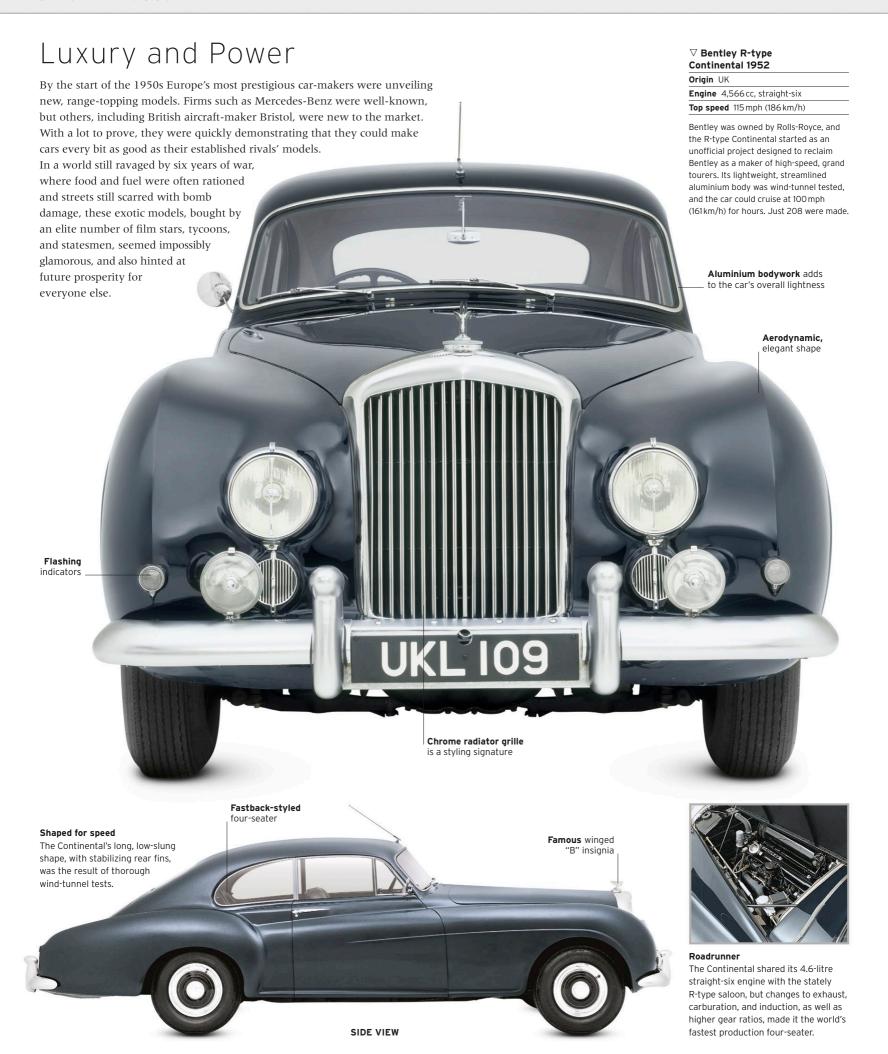

\lhd Buick Limited Riviera 1958

Origin USA

Engine 5,965 cc, V8

Top speed 115 mph (185 km/h)

Buick first used the Riviera name in 1949. By 1958 the model had become big, broad, and brash. Saloons were the first four-door "hardtop" Buicks with no central door pillars, and the model had features including air-assisted suspension, self-dipping headlamps, electric aerial, and power seats.

▷ Mercedes-Benz 300 1951

Origin Germany

Engine 2,996 cc, straight-six

Top speed 103 mph (166 km/h)

Launched in 1951 the 300 was a serious Rolls-Royce and Cadillac rival, championed by the likes of actor Errol Flynn, and Germany's first post-World War II leader, Konrad Adenauer. As fast as a Porsche, later 300s had fuel injection, like their iconic 300SL coupé stablemates.

□ Bristol 403 1953

Origin UK

Engine 1,971 cc, straight-six

Top speed 104 mph (167 km/h)

This luxury grand tourer was virtually handmade. Its hand-beaten, aluminium body clothed suspension, gearbox, and 100 bhp engine derived from 1930s' BMW technology, which the Bristol acknowledged with a BMW-like grille. The 403's wind-tunnel tested body was more aerodynamic than cars made decades later.

⊳ BMW 502 1955

Origin Germany

Engine 3,168 cc, V8

Top speed 105 mph (169 km/h)

The first new BMWs since the 1930s, 502s were known as "Baroque Angels" for their distinctive shape. Gearboxes were mounted separately from engines, under cabin floors. Other innovations included fully independent suspension, and eight-cylinder versions had the world's first production aluminium V8 engines.

⊲ Jaguar Mk IX 1958

Origin UK

Engine 3,781cc, straight-six

Top speed 114 mph (183 km/h)

Jaguar dropped in its fabulous twin-cam, XK engine from its sports-car line to power this big saloon. Despite its American-friendly bulk, the fast, fine handling Mk IX became a successful saloon and road rally racer. Cheaper than many rivals, it lived up to Jaguar's marketing boast of "space, grace, pace".

Great Marques The Morgan Story

The Morgan Motor Company, based in the English county of Worcestershire, has turned old-fashioned quirkiness into an art form. Still independently owned, the firm continues to build sports cars with a heritage dating back to the 1930s, in a factory complex that opened in 1914.

MORGAN FOUNDER HARRY "H.F.S." Morgan started his engineering career working for the Great Western Railway, before setting up a garage selling and repairing cars. In 1909 he built his first car, a single seater with one wheel at the back, tiller steering, and a V-twin Peugeot engine. This basic, but carefully engineered little vehicle was one of the first "Cyclecars".

Morgan launched a production version with limited sales success, thanks to the tiller and single seat, but the car's performance and toughness won praise, and when two-seater versions with steering wheels appeared, demand grew quickly. In fact, his design template was widely copied, but rivals generally struggled to meet his cars' standards.

The Morgan's reliability and verve, along with handling that was safer than other three-wheelers, made this little tricycle a popular competition car, and a performance version, the Grand Prix, was built. Soon, Morgans were familiar and successful sights on racetracks such as Brooklands, where they beat much bigger, more powerful cars.

Morgan was to use a variety of engines for its three-wheelers, but it enjoyed particular success with JAP water-cooled V-twins. Its cars were chain-driven, with two-speed transmissions, and many of the controls, including the throttle, were operated from levers on the steering wheel. Later Morgans gained further refinements, such as a third gear, reverse, and front brakes, which were required for more powerful models such as the

Brochure advertising the Morgan 4/4

Morgan Plus Four Plus, 1964 An attractive plastic bodyshell brought Morgan into the modern world, but customers shunned it, and the Plus Four Plus was a flop.

Super Sport. This machine could manage around 80 mph (129 km/h) in 1927.

By the 1930s Morgan was fighting competition from four-wheeled sports cars, like the MG M-type Midget, which had more creature comforts and conventional driving controls. The advent of its new F-type three-wheeler in 1933 saw Morgan use Ford 8hp car engines and conventional gearboxes.

F-type three-wheeler in 1933 saw Morgan use For 8hp car engines and conventional gearboxes.

In 1936 Morgan built its first four-wheeler, the engaging little 4/4. With independent front suspension and a light hody, the

and could hit 75 mph (121 km/h). Its design template is evident in many of today's Morgans.

World War II saw the Morgan factory making aircraft parts, but car production got underway again from 1946. The firm now concentrated on four-wheelers, which eventually featured more powerful Standard Vanguard engines that would soon be shared with rival Triumph TR sports cars.

"It's not modern, but it's deeply, deeply cool."

TOP GEAR MAGAZINE WEBSITE, 2016

Morgan Plus 8, 1968

Rover's allaluminium V8 engine was installed in a widened Morgan in 1968, and an exciting new performance car was created, boasting fierce acceleration

Morgans won the 1951 and '52 RAC Rally team awards with Harry Morgan's son Peter at the wheel. Peter eventually took over the company in 1959.

In 1963 Morgan tried to update its image with the Plus 4 Plus, a pretty coupé with a fibreglass body, but just 26 were ultimately made. In 1968 Morgan put Rover's high-performance 3.5-litre V8 engine into the Plus 4 and created the legendary Plus 8.

To this day Morgan still builds modern versions of the 4/4, with its ash-framed body and separate chassis, but in 2000 it launched the Aero 8, a companion model with a 4.4-litre BMW, V8 engine, aluminium body, wood frame, and modern bonded aluminium chassis. Morgan has since continued refining this design alongside the traditional models, and in 2008 revealed a fuel cellpowered one-off called the LIFE Car, propelled by four electric motors, and with 367 bhp.

The company is also building a modern interpretation of its classic three-wheeler, with a 1,983 cc, American S&S V-twin engine, mated to a five-speed Mazda gearbox, so owners of these insect-like vehicles have the luxury of reverse gear. With a top speed of 115 mph (185 km/h) it continues the Morgan tradition of moving quickly on just one wheel at the back, and is a big success for the company.

Many famous, low-volume performance car-makers have gone bust or been bought out, but Morgan continues to stand alone.

Morgan Plus 8, 2014

Very much in the traditional Morgan idiom, the visceral thrills of the Plus 8 include a 0-60 mph time of just 4.4 seconds, and a windscreen as an option.

CLASSICS OF THE FUTURE

4/4 The embodiment of Morgan tradition, the 4/4 was first produced in 1936, and some say it is the car with the word's longest production run. Customers know precisely what to expect from the car and a new model is always an instant classic. A wood-framed body with flowing mudguards and cutaway doors is mounted on a separate chassis. and Morgans with V8 engines can go very fast. However, for a more authentic period feel, the 4/4, with its 1,595 cc Ford engine, although still rapid, is a more leisurely proposition.

△ Morgan 4/4 2009

Origin UK

Engine 1.595cc. straight-four

Top speed 115 mph (185 km/h)

The 4/4, which means four wheels and four cylinders, employs the latest Sigma series engine from Ford, producing 125 bhp.

Three-wheeler Morgan built its famous threewheelers from 1910 to around 1946 (the last ones were assembled from parts in 1953), so a modern reinterpretation of the design was big news when it launched in 2011. With the engine fully exposed at the front of the car, and its explosive cylinders banging away, the driving experience feels more like a form of flight along the road.

△ Morgan Three-wheeler 2011

Engine 1,983 cc V-twin **Top speed** 115 mph (185 km/h) At 1.157 lb (525 kg), the three-wheeler's exemplary power to weight ratio gives maximum power for minimum revs. It is built for driving pleasure.

Fantastic Fins

By the late 1950s American car design had reached a new level of exuberance. The tailfins, two-tone paint schemes, whitewall tyres, and wraparound screens that typified most US models had inspired many European car-makers, with the likes of sober Humber and sensible Simca producing cars that looked a bit like scaled-down Chevys and Chryslers. American cars received yearly styling makeovers so that owners of 1957 and '58 models would look covetously at the new luxury features and bigger tailfins of their 1959 replacements and trade in their old cars, a process helped by aggressive TV advertising and travelling circus-style sales roadshows.

Captive-Aire tyres are

guaranteed not to deflate

abla Buick Roadmaster 1957

Origin USA

Engine 5,965 cc, V8

Top speed 112 mph (180 km/h)

The Roadmaster was one of Buick's most luxurious models, wearing its bonnet mascot with pride. Buick called it the "proud choice of the man who carries success with ease". Standard features included speed-limiter buzzer, electric windows, and a foot-operated button for changing radio stations.

automatic transmission, and sharp coachwork, thanks to the "forward look" styling of designer

Virgil M. Exner (see pp. 100-01).

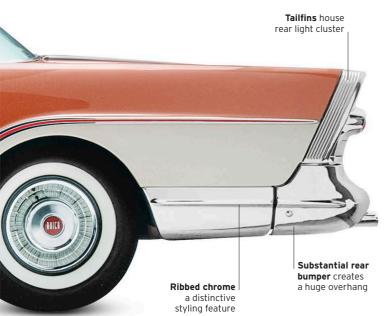

Fin detail

By 1957 the Roadmaster had joined the ranks of American cars bearing tailfins, though compared to some rivals these were quite restrained. By making copycat models, however, Buick sacrificed its reputation for building high-quality conservative cars, and sales fell by almost one-quarter in 1957.

Height of fashion

Like many cars of the era, the Roadmaster featured a wraparound windscreen, endowing it with a modern, space-age appearance. Adding to the impression of speed, power, and excess, the oversized chrome bumper had jet engine-like protrusions, though these were purely decorative.

Style and substance

The wraparound rear windscreen was on the small side for such a large car, and gave limited rear visibility when reversing. In contrast, the boot was cavernous, ideal for carrying home the latest consumer products of the day.

Cadillac Series 62 Convertible Coupé 1958

Origin USA

Engine 5,981cc, V8

Top speed 116 mph (186 km/h)

All-new styling with ever-more elaborate detailing brought Cadillac up to the minute in 1957, and the fins grew even bigger and more shark-like in 1958. The engine had grown too; it now boasted a thunderous 310 bhp in standard form.

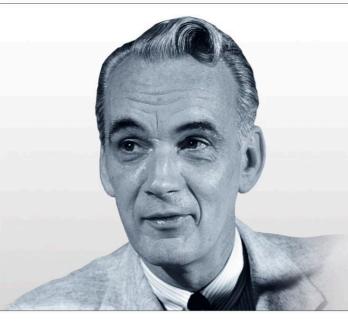

Plymouth Fury 1959

Origin USA

Engine 5,205 cc, V8

Top speed 105 mph (169 km/h)

Designed by Virgil Exner (see pp. 100-01), the Fury coupé was one of Plymouth's most stylish and rapid models to date. In unofficial speed trials following its launch, it reached 150 mph (241 km/h) and achieved 0-60 mph (96 km/h) in 7.7 seconds.

Great Designers Virgil Exner

At his peak, Virgil Exner's influence over Detroit was as significant as any designer's. A true artist endowed with an air of sophistication, he brought vision, innovation, and a much-needed sense of restraint to 1950s' American car design. Exner's ideas breathed new life into Chrysler's range and transformed the company's fortunes. His best creations are now recognized as landmarks of automotive history.

Career highlights

▶ 1947 Exner's first design to make production is the striking Studebaker Champion Starlight, although Raymond Loewy is credited for it

 \triangle Studebaker Champion Starlight coupé, 1950 The hugely successful, five-passenger Starlight coupé caught the eye with its long, bonnet-like boot cover and panoramic rear windscreen. The bullet-nose, or "spinner", front styling was a distinctive feature.

- ▶ 1951 The Chrysler K-310 concept car, built by Ghia in Italy, is a beacon of restraint and good proportion
- ▶ 1953 Exner's best-known design, the Chrysler D'Elegance, is launched. It is later bought by Volkswagen
- ▶ 1953 The influential Dodge Firearrow concept car mixes Italianate flavours with classic American flair
- ▶ 1955 Exner instigates the creation of a new luxury marque - Imperial - and invents the highly regarded "Forward Look" for Chrysler
- ▶ 1957 Chrysler and Imperial models feature wraparound side glass - a world first
- ▶ 1969 Exner revives the Stutz marque with the boldly styled, retro-look Blackhawk, which will remain in production until 1987

BESTRADDLED BY larger-thanlife figures, such as Harley Earl and Bill Mitchell of General Motors, post-war American car design is often characterized as brash and overblown. In contrast, Virgil Exner's sensibilities were more artistic, aesthetic, and tasteful. Throughout the 1950s his

designs for both massproduction models and concept cars were notable for their understated looks and shapes that were unusually smooth by American standards. Born in Ann Arbour, Michigan, in 1909, Exner always showed a keen interest in art (which he

studied at university) and cars (he built his own Ford Model T hot-rod). His first job was drawing for an advertising studio but, when Harley Earl saw some car designs he had penned for a local newspaper, Exner was offered a job in the Art & Colour Section of General Motors (GM).

In 1938 Exner left GM to join Raymond Loewy's industrial design firm, where he worked on styling Studebakers. Exner even contributed to the war effort by co-designing the DUKW amphibious vehicle.

STEPPING INTO THE STARLIGHT

Exner and Loewy soon went head-to-head in competion to design Studebaker's first post-war automobile. Exner emerged victorious and the result was the striking 1947 Studebaker Champion Starlight coupé. Loewy was publicly credited for the design however, which intensified the rivalry between the two designers.

In 1949 Exner became head of Advanced Styling at Chrysler. Here, he had the brilliant notion of teaming up with an Italian coachbuilder to realize his dream of designing cars that featured simple outlines and minimal

At the drawing board

Exner is shown here in the "golden years" of his career, discussing designs for the Chrysler C-300, the first model to showcase his revolutionary "Forward Look" styling. Exner's visions were perfect for an era of excess.

embellishment. The coach-builder was Ghia, a once-proud company that was now reduced to making bicycles in the post-war era. The first fruit of this collaboration was a landmark automobile that instantly propelled Chrysler to the forefront of the American "dream car" phenomenon: the K-310 of 1951. Chrysler trumpeted both its European influence and its distinctively American style (such as the dummy spare tyre on the boot lid). No less striking was Exner's Chrysler D'Elegance of 1953, also built by Ghia. Volkswagen stepped in the following year and bought manufacturing rights to the D'Elegance, downscaling it to become the VW Karmann-Ghia.

The America press heaped praise on Exner's designs, none more so than the elegant Firearrow concept car series of 1953–54. The tycoon Eugene Casaroll purchased the rights and produced 117 cars, renamed the Dual-Ghia, from 1956 to 1958.

CHRYSLER 300F 1960

TAIL LIGHT, CHRYSLER IMPERIAL CROWN 1957

"Nothing says style like a Virgil Exner design."

PLYMOUTH VALIANT ADVERT 1962

FORWARD LOOKING

When it came to cars designed for mass-production, Exner made a huge impact with his dramatic "Forward Look" styling, which arrived with the 1955 Chrysler C-300. The low roofline, short bonnet, and long boot marked a clear step into a bold new era of car design.

Exner's sleek "Foward Look" creations advanced automobile aerodynamics significantly, and the huge tailfins he espoused were said to aid stability. The 1956 Dart show car had possibly the tallest tailfins ever seen, but the claim that the Dart had just one-third the drag of a conventional car was probably fanciful.

At this stage, Exner could seemingly do no wrong, designing acclaimed models for Dodge, DeSoto, and the up-market Imperial (a new marque that he instigated). Things quickly took a turn for the worse, however. With a fondness for caffeine, cigarettes, and alcohol, Exner suffered a heart attack in 1956. When he returned to work after surgery, other designers were in favour.

Gradually Exner was drawn into adopting the ever-increasing excesses of US styling. His late 1950s, gaping-maw grilles and contorted rear fins followed fashion, rather than setting it. By 1961 Exner had been ejected from design command at Chrysler.

Now independent, he attempted a string of abortive marque revivals: Mercer, Bugatti, Duesenberg, then Stutz (which actually saw production from 1969). It was an undistinguished end to an otherwise glittering career that set the benchmark for American car design. Virgil Exner died of heart failure in 1973, aged just 64.

Mercedes 300SL

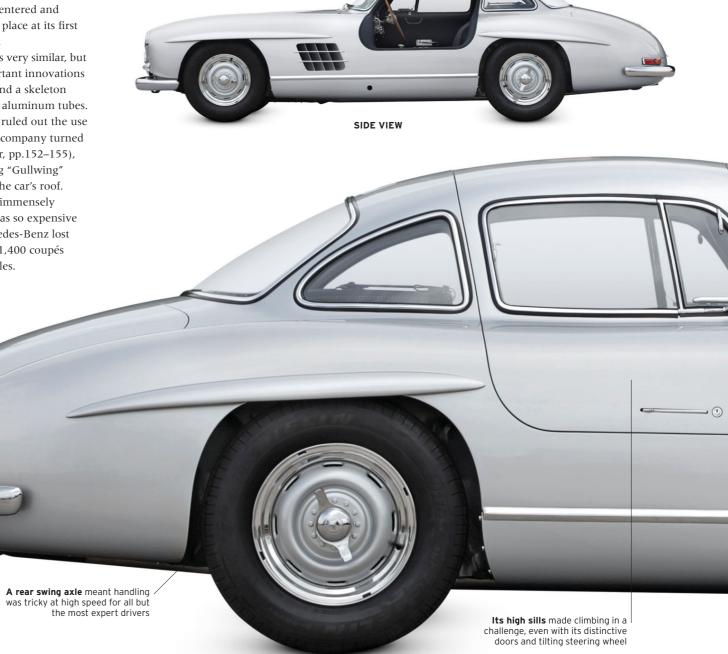

With its highly distinctive "Gullwing" doors, the Mercedes-Benz 300SL was the fastest production car in the world at its launch in 1954. Its name, *Sport Leicht* ("Sport Light"), denoted a sincere attempt by its creators to produce and sell a genuine racing car for the road. The decision to unveil the car at the International Motor Sports Show in New York emphasized the company's desire to win sales in the affluent American market.

THE "GULLWING" was based on the Mercedes W194 sports-racer. This legendary track car had won nearly every race it entered and secured an impressive second place at its first outing, the 1952 Mille Miglia.

The new road-going car was very similar, but came with a number of important innovations that included fuel injection, and a skeleton chassis constructed of welded aluminum tubes. This innovative "spaceframe" ruled out the use of conventional doors, so the company turned to Hans Trippel (see Amphicar, pp.152–155), who perfected the upswinging "Gullwing" design using hinges fitted to the car's roof.

The metal spaceframe was immensely strong and lightweight, but was so expensive to produce it was likely Mercedes-Benz lost money on it – despite selling 1,400 coupés and a further 1,858 convertibles.

A steel body came as standard; weight-saving aluminium was an optional (expensive) extra

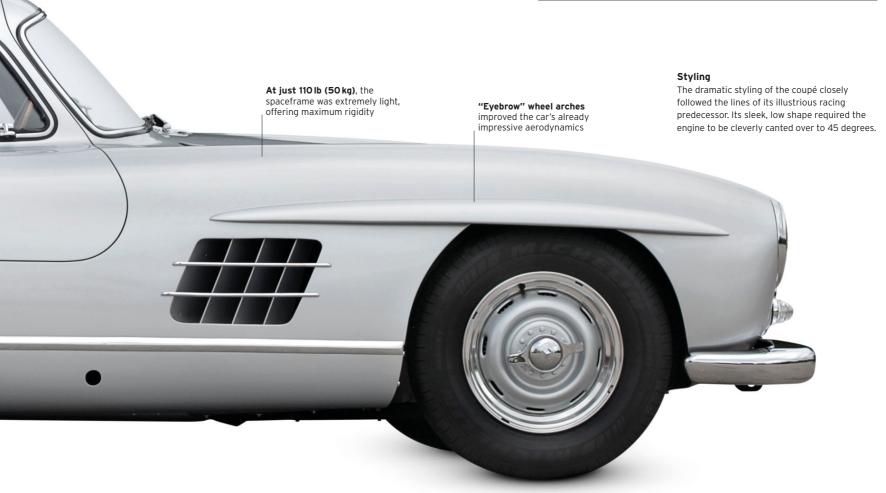

Mercedes Benz badge

Among the world's most famous emblems, the three-pointed star represented the fledgling company's ambition to succeed "on land, on water and in the air". The name Mercedes was taken from the daughter of Emil Jellinek, an important backer of the company that became Daimler-Benz.

SPECIFICATIONS	
Model	Mercedes Benz 300SL, 1954-63
Assembly	Germany
Production	1,400
Construction	Space-frame with steel and alloy body
Engine	2,996 cc, straight-six
Power output	240 bhp
Transmission	4-speed manual
Suspension	Front and rear coil springs
Brakes	All-round drums
Maximum speed	129 mph (208 km/h)

ON THE ROAD

Not to be confused with successive generations of SL sports cars – the latest iterations of which are still in production today – the original 300SL was a true technical tour de force, and one of the most outstanding machines of its day.

For the collector and enthusiast this car has everything, from a race-winning heritage, to the sort of breathtaking performance and head-turning exclusivity that only the most exceptional Italian thoroughbreds can rival. Its innovative construction, ferocious pace, superb engineering, and elegant shape have simply never lost their allure. That the car requires an expert driver to get the most out of it serves only to make it even more desirable, and those who know them well don't even blink when one of the precious survivors sells for a small fortune.

Sports Cars

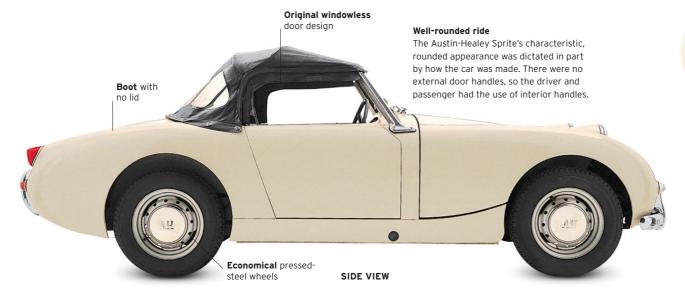

Cars are complicated and expensive to design and build, so manufacturers have always tried to find ways of reusing components in as many models as possible, which meant developing new markets. In the 1950s they discovered sports cars. A new generation of drivers wanted fun and excitement, and car-makers were happy to provide them with low-slung coupés and convertibles, many of which became motoring icons. Under the skin, however, most of these racy models shared engines, suspension, and other parts with sedate saloons. Americans in particular had a huge appetite for compact, European-made sports cars, and bought them by the shipload.

Style and simplicity

The simple dashboard and instrument display were in keeping with the Sprite's uncomplicated character. Some of the dials and switches were shared with Austin and Morris models.

Below the bonnet

The one-piece bonnet allowed complete access to the Sprite's engine, brakes, and suspension. The car was powered by the tough A Series engine also found in the Austin A35 and Morris Minor.

Origin Italy

Engine 1,290 cc, straight-four

Top speed 112 mph (180 km/h)

This elegant sports car, styled by Italian design house Pinin Farina, had performance far higher than its 1.3 litres would suggest, thanks to its superb, free-revving, alloy, twin-cam engine. Unlike its simply engineered British rivals, the sophisticated Spider was a scaled-down exotic.

⊲ MGA 1955

Origin UK

Engine 1,489 cc, straight-four

Top speed 100 mph (161 km/h)

The sleek, low-slung MGA marked a big departure for its makers, which had built cars with a design template that could be traced back to the 1930s. The MGA handled nicely, could achieve 100 mph (161 km/h), and sold well in the US, though a temperamental twin-cam version proved less successful.

⊳ Porsche 356A 1955

Origin Germany

Engine 1,582 cc, flat-four

Top speed 100 mph (161 km/h)

With its rear engine and swing-axle rear suspension, the 356 was essentially a high-performance VW Beetle (see pp. 54-55) with a coupé body; and both cars were designed by Ferdinand Porsche. Launched in 1950, the 356 grew ever faster, with the twin-cam Carrera form reaching a speed of 125 mph (201km/h).

$\mathrel{\vartriangleleft}$ BMW 507 1956

Origin Germany

Engine 3,168 cc, V8

Top speed 135 mph (217 km/h)

When the 507 was launched, BMW imagined that this beautiful V8-engined car would be a big hit in the US, but prices were virtually double those anticipated. In the event, only 250 were sold and BMW narrowly avoided bankruptcy. Despite this, the car became an instant design classic and style icon.

German Engineering

For a nation so recently devastated by wartime bombardment, Germany's automotive resurgence in the 1950s was impressive. The resurrection of the Volkswagen project, and the methodical rebuilding of the Mercedes-Benz, Opel, and German Ford marques, laid the foundations for the mighty German car industry we know today. But there was ingenuity and design innovation to be found elsewhere – from the tiny economy cars of Zündapp and BMW, to the excitement of Porsche on road and track, the return of DKW, and even the emergence of Borgward as a mainstream car-maker. Germany was mobilizing again, only this time in peace and positivity.

⊳ Zündapp Janus 1957

Origin Germany

Engine 245 cc, single-cylinder

Top speed 50 mph (80 km/h)

Developed by former aircraft company Dornier, and manufactured for just two years by the Zündapp motorcycle firm, the Janus was meant to be a cut above other "bubble" cars, with back-to-back seating and doors at each end.

Body free of side doors - entrance through front

and rear panels

⊳ Porsche 550 Spyder 1953

Origin Germany

Engine 1,498 cc, flat-four

Top speed 136 mph (219 km/h)

When Porsche designed a new engine with double overhead camshafts on each side for its 550 racer, it became a highly effective competition car. The model was made famous by the death of actor James Dean in 1955.

□ DKW Sonderklasse 1953

Origin Germany

Engine 896 cc, straight-three

Top speed 75 mph (121 km/h)

With its light, air-cooled, two-stroke engine and aerodynamic styling, the DKW was faster than its small engine size suggested. Its interior space was large, growing a further 4 in (10 cm) in 1955 with the launch of the four-door version.

Bonnet not required

Zündapp's own singlecylinder, air-cooled engine was positioned centrally behind the seats, driving the rear wheels. This kept length to a minimum, while at the same time provided a notably spacious cabin.

View out the back

Rear-seat passengers faced the following traffic; indeed, the car's "front-back" design was named after the two-faced, Roman God, Janus. It was a comfortable ride, thanks to MacPherson strut suspension all round.

ightharpoonup Borgward Isabella TS Coupé 1954

Origin Germany

Engine 1,493 cc, straight-four

Top speed 93 mph (150 km/h)

The Isabella sold over 200,000 examples in seven years in saloon, estate, this coupé and rare convertible forms. It was a fine-handling, responsive car, but this family company from Bremen folded in 1961.

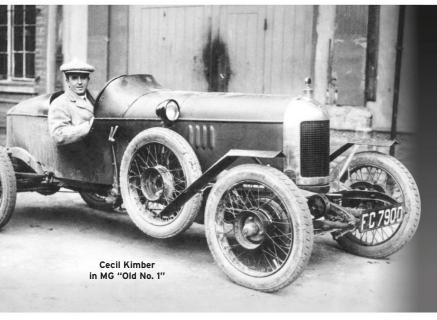

< BMW 600 1957

Origin Germany

Engine 582 cc, flat-twin

Top speed 62 mph (100 km/h)

This was an enlarged variation of the Isetta microcar, featuring a larger engine from a flat-twin BMW motorbike. The independent rear suspension was quite sophisticated, but the car did not sell well, and was on sale for only two years.

Great Marques The MG Story

MG - the company that virtually invented affordable, fun, British sports cars - started life making stolid, unsporting Morris cars go faster, but it quickly adapted and modified them into some legendary models to produce "affordable, performance cars".

THE INITIALS "MG" STAND for "Morris Garages", a Morris dealership in Oxford, owned by Morris Motors founder, William Morris, and run by general manager Cecil Kimber. In 1922 Kimber began to offer racier bodies to sit on sensible, sedate Morris chassis with mechanical parts that were soon being tuned to improve performance.

Two years later he launched the MG 14/28 Super Sports, based on the 1.8-litre Morris Oxford, but with a stylish, lightweight aluminium body. The car was a success. The six-cylinder 18/80 followed, but this was more of a fast touring car than outright sports model. That came in 1929

> with the M-type Midget, based on the 847 cc Morris Minor, but with a pretty, open-top, twoseat body.

This 65-mph (105-km/h) machine became the UK's first truly affordable mass-market sports car, and set the mould for MG's best-known offerings, a series of open roadsters with separate wings, cutaway doors, running boards, and oftenoctagonal instruments shaped like MG's famous badge. These models culminated in the TF Midget, which was built until 1955.

M-types were modified and became successful racing cars, some fitted with superchargers, and a series of competition MGs enjoyed publicitygenerating attention at venues from Brooklands to Italy's Mille Miglia.

The mid-1930s saw MG give up the racetrack, when it was sold to the vehicle-making Morris

MGB brochure, 1962

The MGB was a major step forward for the marque, but it had plenty of European rivals, so the advertising campaign supporting the car was constant.

MG's cars. This also meant that Cecil Kimber now had to answer to a board of directors. After a series of disputes he left in 1941.

MG returned to car production in 1945 following the end of World War II with the Y-type saloon and the MG TC Midget sports model, which became a massive hit in America. Its 300 bhp, teardropshaped EX181 car also grabbed headlines in the late 1950s when it reached a speed of 254 mph (408 km/h), to establish a land speed record.

"Even now, more than half a century after its launch, the MGA is thrilling to drive. It's hard not to smile as you settle into the low-slung seat."

AUTO EXPRESS MAGAZINE, JANUARY 2014

MG TC Midget, 1945

American servicemen based in war-torn Europe fell in love with the Midget, driving US export sales.

MG was part of the deal, and three years later it launched the MGA, with modern, wind-cheating bodywork. The car was another sales success, despite mechanical problems with a short-lived twin-cam version.

The early 1960s saw MG revive the Midget name for a baby sports car that was virtually identical to the Austin-Healey Sprite. In 1962 it launched the 1,800 cc MGB open two-seater, which replaced the MGA and had a chassis-less body. A closed GT version followed, and both sold well, unlike the short-lived, 3-litre MGC, whose heavy engine caused handling problems.

There were also MG versions of BMC saloons,

such as the Morris Oxford and 1100, but by 1971, when further mergers saw MG become part of British Leyland, these were axed. Lack of funds for development saw the ageing Midget and B continue until 1980. Only a short-lived, mid-'70s V8, 3.5-litre B enlivened the range. Despite an attempt by the owners of Aston Martin to buy MG, production ended, the name

MGA, 1955

More than 100,000 examples of the delightful MGA were produced at MG's bustling factory at Abingdon, Oxfordshire.

was put on ice, and its famous factory in Abingdon was closed. The MG badge returned in the

early '80s on a series of sporting versions of Austin Metro, Maestro, and Montego family cars, and in 1992, the RV8, a revised B with

a 3.9-litre, V8 Range Rover engine, was built to revive MG's sports car heritage. Two years later came the mid-engined MGF, which, like its classic predecessors, used many parts from saloon models, by then made by the Rover Group. This car evolved into the TF. Both vehicles sold well, having been built when BMW owned Rover and latterly, the Phoenix Group, which sold re-badged performance versions of the Rover 25, 45, and 75 saloons as MGs.

The Rover Group went bankrupt in 2005, and was bought by Chinese car-maker, Nanjing Automobile. MG currently makes saloon and hatchback models in China, and has enjoyed success in the British Touring Car Championship race series.

CLASSICS OF THE FUTURE

TF A reworking of the 1995 MGF two-seater, the TF did away with its predecessor's Hydragas suspension, in favour of steel springs. It was restyled and given a variety of design upgrades. Engines ranged in power from 114 bhp 1,598 cc to 160 bhp 1,796 cc with variable valve timing. Most were five-speed manuals, but some had six-speed, CVT self-shifting transmissions. It was the UK's best-selling sports car, and to date the last opentop two-seater to wear an MG badge.

 \triangle MG TF 2002

Origin UK

Engine 1,796 cc, straight-four
Top speed 137 mph (220 km/h)

The TF offered affordable open-top motoring and sporty handling. With a gutsy engine, attractive styling, it was a classy car.

ZT260 Not your typical MG sports car, the ZT260 was a Rover 75-based model offered in both saloon and estate versions. Re-engineered from front- to rear-wheel-drive, it was fitted with a Ford Mustang 4.6-litre, V8 petrol engine and a hefty-but-effective 5-speed manual gearbox (some autos were also built). The few cars that were made had instant collector appeal. Plans for an even quicker supercharged version were never realized thanks to MG Rover's collapse.

△ MG ZT260 2003

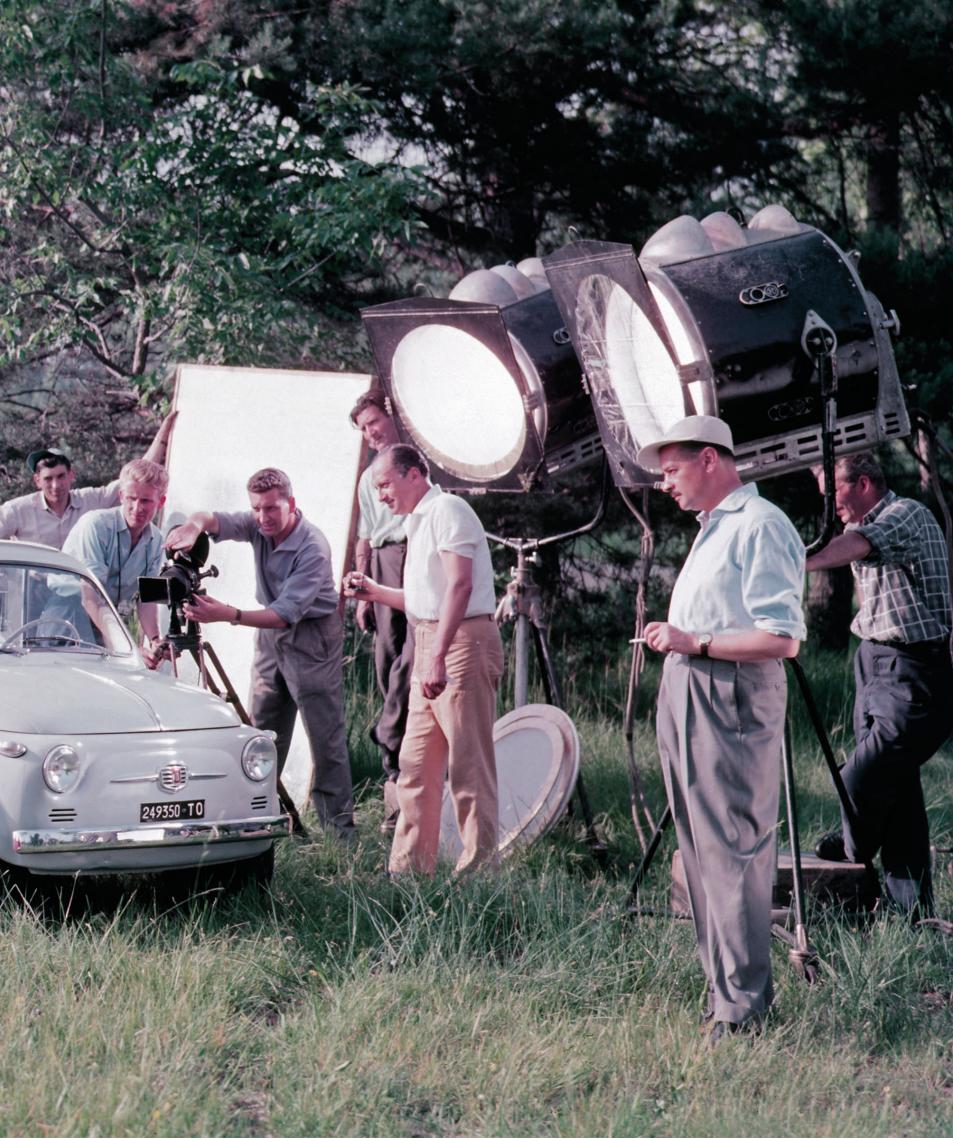

Origin UK

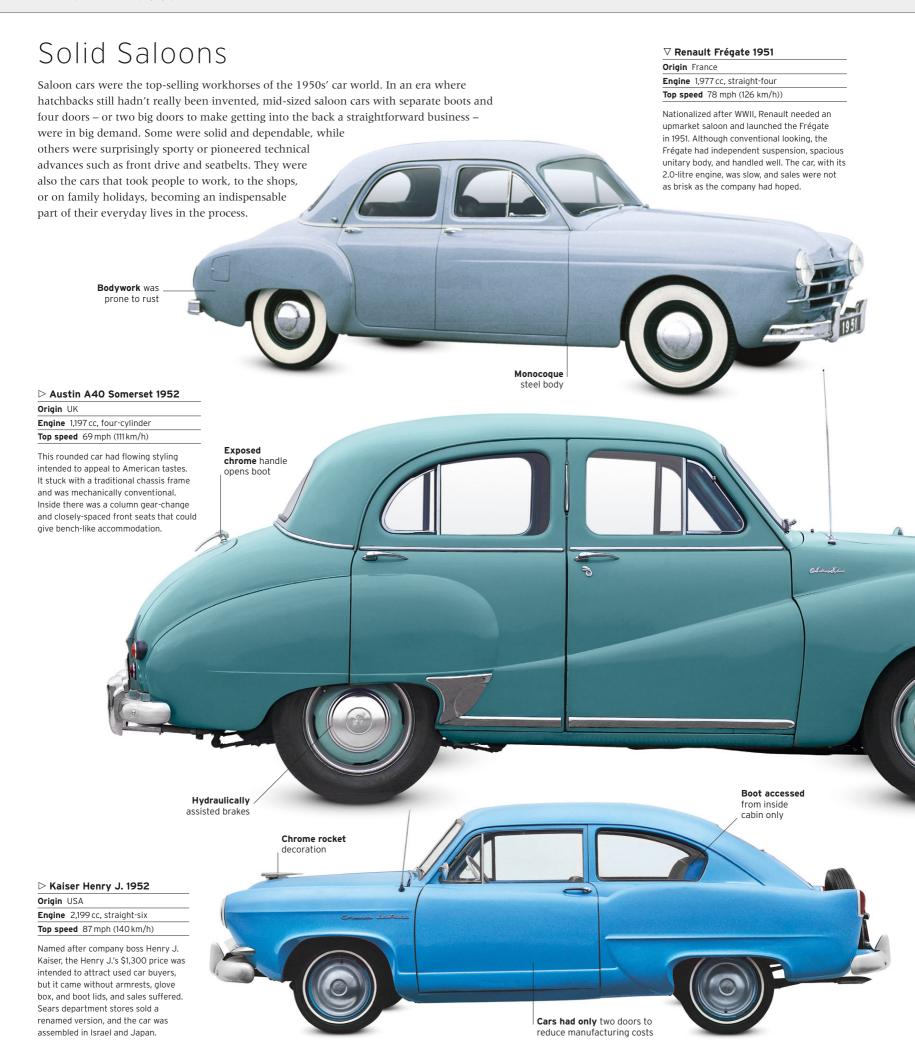

Engine 4,600 cc, V8

Top speed 155 mph (250 km/h)

With fully independent suspension all-round and more power than any other MG, the ZT260 was a real wolf in sheep's clothing.

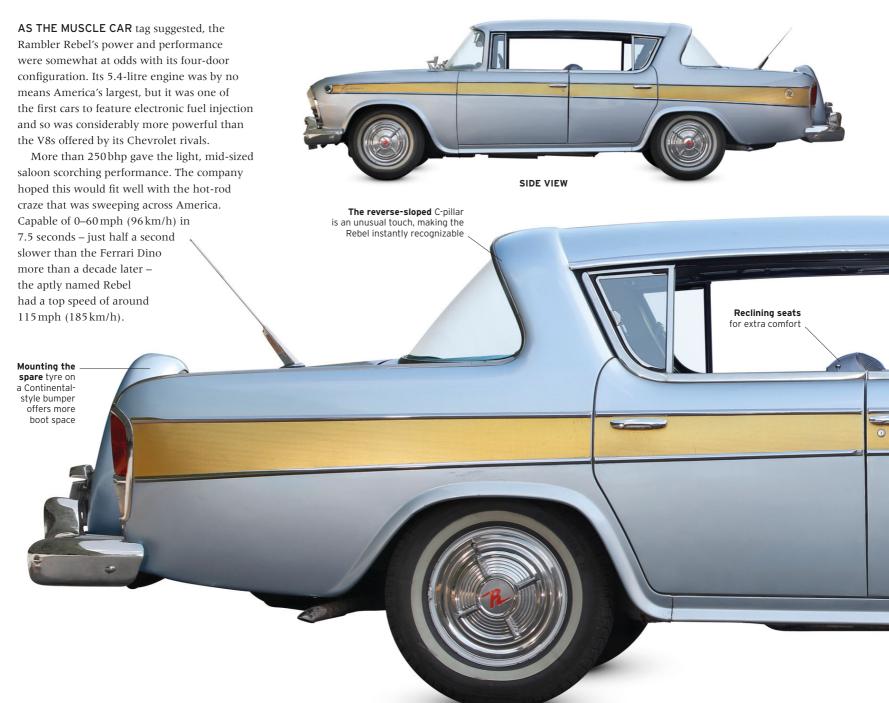

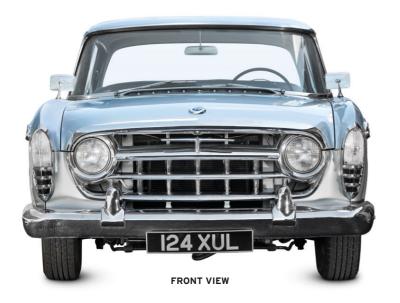

Rambler Rebel

The rare 1957 Rambler Rebel was conceived by the American Motors Corporation as a medium-sized, high-performance sedan car. It has since been lauded as the first factory-produced, lightweight muscle car, and is the forerunner of icons such as the Pontiac GTO and Plymouth Road Runner, cars specifically designed in a memorable phrase for "kicking sand in the face of the 98-horsepower weakling".

Rebel badge

The deliberately confrontational Rebel name was carefully chosen to alert potential customers to the unusual nature of the car. Prior to this new departure, the Wisconsin-based AMC had been most closely associated with cars offering little in the way of excitement.

SPECIFICATIONS	
Model	Rambler Rebel, 1957
Assembly	Wisconsin, USA
Production	1,500
Construction	Steel monocoque
Engine	5,385 cc, V8
Power output	255 bhp
Transmission	3-speed manual or 4-speed automatic
Suspension	Front and rear coil springs
Brakes	All-round drums
Maximum speed	115 mph (185 km/h)

ON THE ROAD

Highly unusual at the time, the Rambler's distinctive styling is still something of an acquired taste, but it is even so not hard to see why owners love their Rebels. Now genuinely rare, and almost indecently fast for a four-door saloon of this period, the Rebel badge is far from famous, but being the first ever muscle car gives the original much kudos. This obscure American motor is an authentic automotive landmark.

Consider too the David and Goliath angle to this story: a comparative minnow taking on the might of Chrysler, Ford, and General Motors. Where David had the sling, Rambler had the grunt. Squeezing a hugely powerful V8 into an otherwise ordinary family sedan worked a treat, and before long America's "big three" were forced to retaliate with something of their own.

Front sidelights heavily trimmed with chrome

Stylish Roadsters

1950's America loved two-seat sports cars, or roadsters, and domestic car-makers, as well as rivals from Europe and beyond, rushed to satisfy the endless demand. Seeing the potential of new revenue streams and fresh customers, firms such as Jowett and Triumph, traditionally makers of small vans and comfortable saloons favoured by bank managers, began to manufacture sports cars. Outside America a new generation of drivers began to find that they had more money at their disposal, and the idea of spending it on a roadster and cruising along in an open-top car seemed particularly appealing.

Chevrolet Corvette Mk I 1953

Origin USA

Engine 4,291cc, V8

Top speed 142 mph (229 km/h)

First revealed in 1953 as a concept car, the Corvette's swooping, Harley Earl-styled fibreglass body promised speed that its six-cylinder engine could not deliver. As a result just 700 cars were sold in the first year. A beefy V8 engine, a manual gearbox, and a style makeover transformed sales and an icon was born.

⊳ Jowett Jupiter 1950

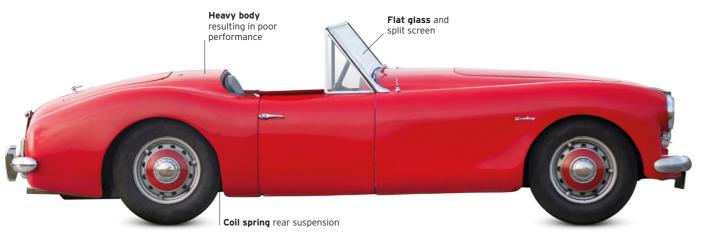

Origin UK

Engine 1,486 cc, flat-four

Top speed 84 mph (135 km/h)

Jowett used the Javelin saloon's brilliant, flat-four engine in the Jupiter two-seater, where its low centre of gravity helped the independently sprung roadster's handling. The Jupiter scored victories at Le Mans and Monte Carlo Rally, but gearbox warranty claims sank Jowett after 899 were built.

Origin UK

Plush interior rivals

European models

Engine 2,993 cc, straight-six

Top speed 100 mph (161 km/h)

Before Donald Healey's Austin-Healey collaboration, the company worked with American vehicle-maker Nash to produce the Nash-Healey sports car. The G-type was basically this roadster, fitted with an Alvis engine and manual rather than automatic transmission. Only 25 cars were ever made, making it very rare.

Futuristic feel

The Corvette's designers were keen to give the car a cutting edge look, and this extended to its interior and exotically shaped instrument cluster, which grouped round dials and gauges directly in front of the driver.

Changing times

Very early Corvettes had single, round headlamps but General Motors was quick to revise the styling. By the time V8 versions were on sale, these quad headlamps were being used.

Back in style

The Corvette started out with fin-like, tail lamp mounts, but was revised to give a more rounded look. Period road testers praised the car's roadholding.

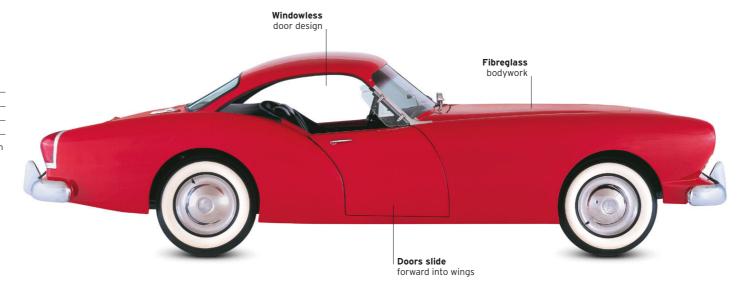

⊳ Kaiser Darrin 1954

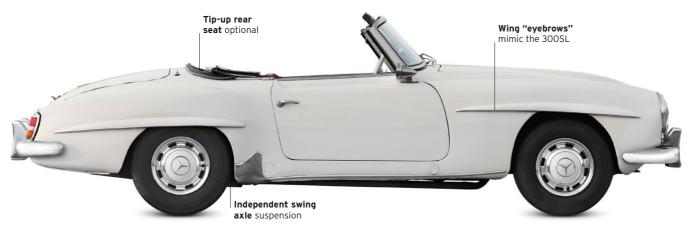

Origin USA

Engine 2,641cc, straight-six

Top speed 96 mph (154 km/h)

Shipbuilder Henry Kaiser began making cars after World War II. The Darrin, America's first fibreglass-bodied sports car, boasted doors that slid into the front wings. Named after its designer, Howard "Dutch" Darrin, the car was only made after Kaiser's wife persuaded him to build it.

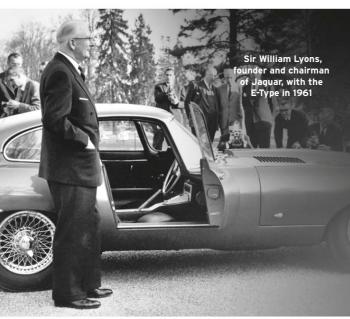

$\mathrel{\vartriangleleft}$ Mercedes-Benz 190SL 1955

Origin Germany

Engine 1,897 cc, straight-four

Top speed 107 mph (172 km/h)

The 190SL was the exotic, gullwingdoored 300SL's more restrained, little brother. Its convertible body shared many of the 300SL's design themes, and the 190 also had independent rear suspension. Launched in New York, the 190SL was more luxury touring two-seater than sports car.

Great Marques The Jaguar Story

In 1922 motorcycle enthusiasts, William Lyons and William Walmsley, went into partnership to build sidecars. Five years later, Lyons designed a stylish body for the Austin Seven, and just one year on from then his firm moved to Coventry; from these humble origins the Jaguar marque leapt into life.

THE SWALLOW SIDECAR

COMPANY, run by William Lyons and William Walmsley, quickly evolved its business by offering attractive coachwork on a variety of chassis. Lyons, however, was determined to make his own cars, and in 1932 he launched the SS1, which used a modified Standard chassis that supported Swallow's rakish coupé coachwork, complete with long bonnet and fake hood irons. The SS1 was an immediate

hit, and in 1934, when Walmsley sold out to Lyons, the company renamed itself SS Cars.

In 1935 Lyons launched his first sports car, and at the end of the year he brought out a brand-new range of Jaguar cars, including three saloons and the 100-mph (161-km/h) SS100 two-seater roadster. Buyers loved Lyons' mix of stunning lines and excellent value, and SS Cars was on a roll. After World War II, the name SS Cars, with its Nazi connotations, was unacceptable, and in

The lipest of its class in the world

Advertising for the Jaguar MkVII saloon

1945 the company changed its name to Jaguar Cars Ltd. In quiet moments during the war, Jaguar engineers had laid plans for a superb 3.4-litre, six-cylinder twin-camshaft engine, which was intended to power a new sports saloon. The engine was called the XK, and Lyons decided to build a sports car that could act as a showcase for the power unit, for display at the 1948 London Motor Show.

This car, named the XK120, caused a huge stir with its 120-mph (193-km/h) performance, sub-£1,000 price tag, and sensational good looks. Lyons quickly turned the machine into a full production model, and it was joined in Jaguar's lineup by the handsome Mk VII saloon in 1950.

Both cars were highly successful in motor sport. The Mk VII was an unlikely rally car, but now Jaguar set its sights on sports car racing domination with its XK120C (for Competition), or C-type. This car, which pioneered disc brakes, won the Le Mans 24-hour race in 1951, driven by Peter Walker and Peter Whitehead. Tony Rolt, Duncan Hamilton, and a C-type repeated the feat in 1953. Jaguar Cars Ltd's scientifically designed D-type saw Le Mans victories in 1955, 1956, and 1957 – an extraordinary achievement for the small British company. Jaguar also created the first compact sports saloon in 1955 – this 2.4 litre ushering in monocoque

2.4 litre ushering in monococconstruction for Jaguar cars. The year 1957 saw a 3.4-litre edition that was very fast, but the cars were transformed in 1959 when they matured to the Mk 2 model,

Jaguar XK120, 1948

The sensational sports car, with its excellent straightsix engine, won itself and Jaguar instant acclaim.

Jaguar Mk 2, 1959

This is the epitome of the compact sports saloon among British classic cars, with six-cylinder engines from 2.4- to 3.8-litre.

becoming one of the most universally coveted Jaguars of all time.

Feeling there was nothing more to prove in racing, Lyons shut the factory competition department, and set his team the task of turning the D-type

into a sports car. The result arrived in 1961 as the E-type – another Jaguar that made an enormous impact. Its clever, aircraft-inspired concept and aerodynamics were impressive, but it was the sleek, arrow-like profile and ability to reach 150 mph (241 km/h) that caused an instant queue of impatient buyers.

Jaguar Cars Ltd, which had itself already acquired Daimler in 1960, merged with the British Motor Corporation in 1966. This in turn led to it joining British Leyland. However, the company

"I want that car and I want it now."

SINGER FRANK SINATRA, ON SEEING THE JAGUAR E-TYPE FOR THE FIRST TIME AT THE NEW YORK AUTO SHOW, APRIL 1961

clung bravely on to its independence, and in 1984 was the subject of a very successful stock market flotation. The company has since been bought and sold by Ford and, today, is owned by India's Tata conglomerate. Jaguar's

120

1960s sporting saloons included the imposing 1961 Mk X and the Mk 2-based S-type/420, which adopted E-type suspension for superior roadholding and handling.

In 1968, however, all Jaguar's saloons were replaced by the XJ6, which proved to be an accomplished compromise between luxury and performance. Not long afterwards, the XJ6 could also be had with Jaguar's all-new, 5.3-litre V12 engine, producing pretty much the finest car in the world.

> The E-type faded by the early 1970s, replaced by the controversial XJ-S, which - despite a troubled

Jaguar XJ6, 1968 The XJ6 replaced no less than four Jaguar saloons in one go, vastly upping the game for ride, handling.

and performance.

start – met with incredible popularity throughout the 1980s. In 1986 Jaguar's venerable XJ saloons were replaced by the XJ40 series, and the decade was rounded off by the unveiling of the new mid-engined, four-wheel-drive XJ220 supercar, which eventually reached customers in 1991. The cars won glory on the racertack when Jaguar's XJR-9 and XJR-12 models saw further Le Mans victories in 1988 and 1990 respectively.

During Ford's stewardship of Jaguar, the new S-type and X-type saloons shared components with its other, more humdrum products, but since Tata has been in control the XF, XE, and XJ have all been pure Jaguar to the core.

CLASSICS OF THE FUTURE

XJ Some 50 per cent of the XJ's structure was made from recycled aluminium; it was about 330 Ib (150 kg) lighter than conventional, steel-rich rivals, which made the car more agile as well as thriftier on fuel. This big Jaguar, codenamed X351 in development, had an all-glass roof as standard across all models. The hand-finished interior boasted chrome and piano-black detailing. British prime minister David Cameron used an armourplated Sentinel version as his official transport.

△ Jaguar XJ 2009

Origin UK

Engine 5,000 cc, V8

Top speed 155 mph (250 mp/h)

After years of the familiar XJ lines, this car was a radical departure - lower. wider, and built around an all-aluminium structure.

F-type Project 7 The F-type had a completely aluminium structure, like all modern Jaguars, and in Project 7 guise every body panel was aluminium too. The supercharged V8 engine put its power to the road through the rear wheels via an eight-speed automatic with steering-wheel paddle and manual override. The so-called Aero Haunch behind the driver summoned up images of the aerodynamic stability fin on the D-type racer of the 1950s.

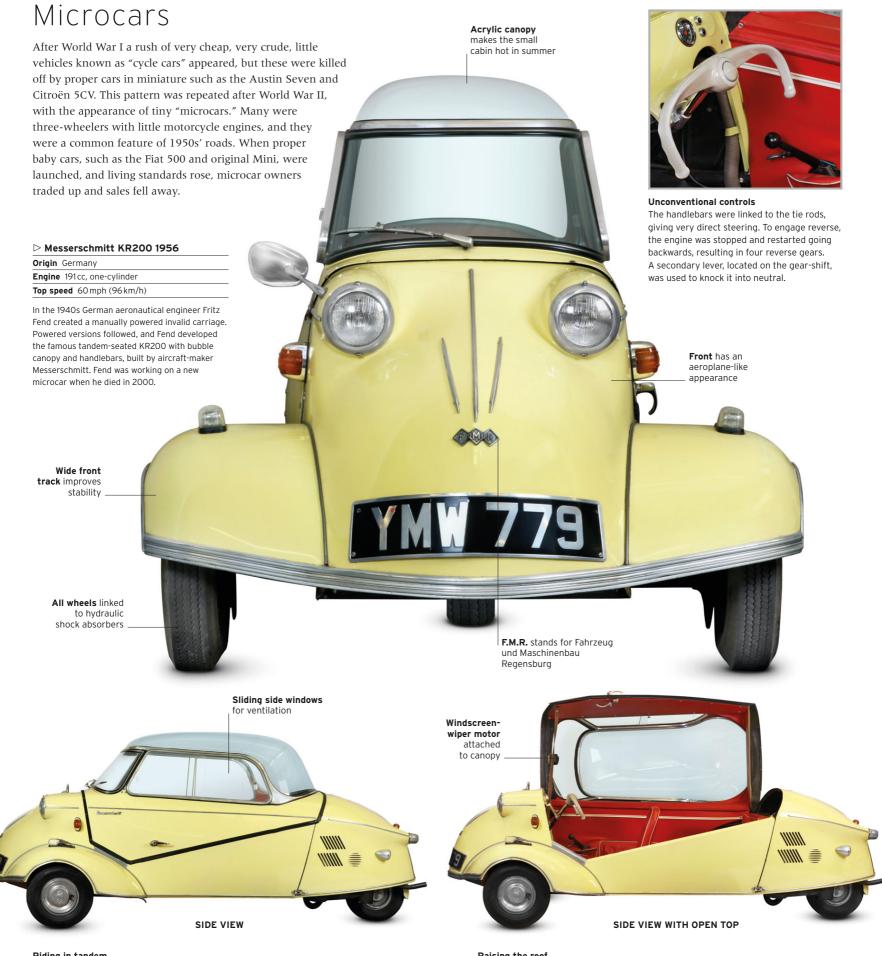

△ Jaguar F-type Project 7 2013

Origin UK

Engine 5,000 cc, V8

Top speed 186 mph (300 km/h)

It took many decades for Jaguar to release a spiritual successor to the iconic E-type, Project 7, with 575 bhp, was Jaguar's most powerful car ever.

Riding in tandem

With the driver at the wheel, the passengers sat directly behind. Although narrow, the rear featured seating for an adult and child. This seating pattern gave the car a low centre of gravity, and with a wheel at each extreme it handled well for a three-wheeler.

Raising the roof

Hinged on the right-hand-side, the acrylic canopy was secured with a single catch. Once open, the rear bodywork could be lifted, giving access to the engine, which was located behind the rear passenger. There was also a spare wheel stowed here.

Volkswagen Kombi

The VW Transporter T1 Microbus-based camper - often known simply as the Kombi - was much-loved when new, and is highly desirable today. The mechanical underpinnings of the Beetle were present in the Transporter (Volkswagen Types 1 and 2 respectively), but the basic van was available in a wide variety of versions to suit every need. The original split-screen model was built from 1950 until 1967, with almost 1.5m examples sold.

THE IDEA FOR the Type 2 came from a Dutch VW importer who visited the Wolfsburg factory intending to place an order for Beetle cars. Instead, a prototype for a new van was produced in a matter of weeks. The Type 2 had a similar wheelbase to the Beetle, but came with a strengthened chassis for heavier loads. With its aerodynamics optimized to offset the 25 hp engine, the Kombi went into production. Rivals soon copied its "forward control" cab, in which the driver sat high above the front axle, but none could match its cool appeal.

A pop-up roof was a very popular after-market option on camper conversions, increasing headroom for daytime activities, such as cooking

REAR VIEW

Volkswagen badge

The first, prewar Beetle was known as KdF-wagen, meaning Kraft durch Freude or "Strength Through Joy", but Adolf Hitler's desire to build a cheap car for the masses led to it being called the Volkswagen or "People's Car", and this name was subsequently adopted.

SPECIFICATIONS	
Model	Volkswagen Transporter, 1950-67
Assembly	Germany, Brazil, and South Africa
Production	1,477,330
Construction	Steel body and chassis
Engine	1,131-1,493 cc, flat-four
Power output	25-51 bhp
Transmission	4-speed manual
Suspension	Torsion bar front and rear
Brakes	All-round drums
Maximum speed	77 mph (124 km/h)

Styling

The purity of this no-nonsense design, first drawn as a doodle by Ben Pon in 1947, has always been an important part of the Kombi's charm. The first versions eschewed any ornamentation, apart from an outsize VW logo on the bull-fronted nose and the distinctive, optional two-tone paintwork.

Twin barn doors give

ON THE ROAD

Still relatively cheap to run and easy to work on, the friendly styling of the Kombi comes with the considerable added advantage of a plentiful supply of mechanical spares. Its close kinship with the Beetle – of which more than 21 million were built and sold – means both the panel- and campervan variants are well suited to modification by owners looking to boost the performance of the model's original 25 hp flat-four.

Like the Beetle, the Kombi has long been popular with customizers, but tastes change and many are now being converted back to near-original spec. Today the highest prices tend to be paid for mint originals, prompting a move to restore these surprisingly practical machines back to that simple, factory-fresh look.

 Minimal instrumentation
 Compact, air-cooled engine

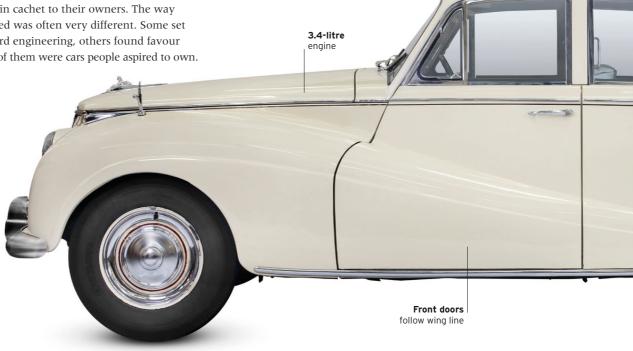

Charismatic Saloons

Cars such as big Opels and Vauxhalls appealed to up-and-coming consumers, who were trading up from economy-minded small saloons, but there was also a breed of large car aimed at a wealthier clientele. Just as today's Mercedes, Jaguar, and BMW models are considered a cut above mass-market cars, so too did makes such as Armstrong Siddeley and Lancia bring a certain cachet to their owners. The way many of these cars were engineered and handled was often very different. Some set store by quality construction and straightforward engineering, others found favour because of their poise and technical flair, but all of them were cars people aspired to own.

Sphinx bonnet mascot

Although in the 1950s Armstrong Siddeley made cars that exuded a discreet English good taste that was far from showy, its distinctive sphinx bonnet mascot was a small piece of chromeplated Art Deco decadence.

$\mathrel{\vartriangleleft}$ Riley RME 1952

Origin UK

Engine 1,496 cc, straight-four

Top speed 78 mph (126 km/h)

The Riley RME was a traditionally handsome car whose split windscreen and separate wings gave it an old-fashioned look. This extended to the way it was built, with a separate chassis and wood-framed body, but its mix of quality and sporting handling won it many friends.

⊳ MG Magnette ZA 1954

Origin UK

Engine 1,489 cc, straight-four

Top speed 80 mph (129 km/h)

This handsome car was an example of "badge engineering". Built by the British Motor Corporation, its body was shared with the Wolseley 4/44 and its engine came from Austin. With twin carburettors and rack-and-pinion steering, the MG was a pleasure to drive with a stylish wood and leather interior.

Aspirational vehicles

The Sapphire was built in an era when many families couldn't afford a car, and those who could managed with something old and second-hand. Along with the likes of Jaguar and Rover, Armstrong Siddeley made the sort of vehicles that most people could only dream of owning.

Origin Czechoslovakia

Engine 2,474-2,545 cc, V8

Top speed 100 mph (161 km/h)

Czech car-maker Tatra began making advanced, high-performance saloons in the 1930s. These had wind cheating bodies and rear engines, and this theme was continued with the 603, which mostly found favour with Czech diplomats. This wellmade, aerodynamic car had a light, strong, air-cooled rear V8 engine and sometimes exciting handling as a result.

⊳ Lancia Flaminia 1957

Origin Italy

Engine 2,458 cc, V6

Top speed 102 mph (164 km/h)

The big, square Flaminia was styled by Italian vehicle designer Pinin Farina, which used similar visual ideas on other models, including the Austin Westminster. However, unlike the British car, the Lancia, with its de Dion transaxle was technically advanced and great to drive.

Great Marques The Cadillac Story

The classic car period of 1940-1990 is the era when the Cadillac name stood for luxury, style, and power in imposingly large packages. Henry M. Leland started the company in 1902, and Cadillac became notable for its ability to manufacture high-quality cars on a large scale.

HENRY M. LELAND WAS ALREADY a veteran of the auto industry and an experienced inventor when he founded Cadillac – named after the 18th-century founder of Detroit, Antoine de la Mothe Cadillac. The initial Model A actually used an Oldsmobile engine design in a Ford-derived chassis, but it was the four-cylinder Model D three years later that propelled the marque, briefly, into the position of the world's third largest car-maker.

In 1909, Cadillac was taken over by General Motors (GM), and continued to innovate with the first across-the-board use of electric starters – a complete game-changer for the marque. The V8 models were soon offered in a wide range of body styles, and in 1930 Cadillac became the first (and so far the only) manufacturer that offered V8, V12, and V16 models concurrently; meanwhile, for balance, in 1927 it also introduced the cheaper LaSalle brand, although that was axed in 1940.

During the 1930s the name Fleetwood (after a Pennsylvania coach-builder) was used to denote top-range Cadillacs, and the influence of youthful GM styling chief and former custom-car wizard Harley Earl began to shine through in the urbane

modernity of the typical Cadillac. The 1938 Cadillac 60 Special had strikingly smooth, modern styling by another young designer, Bill Mitchell, who would head-up the Cadillac styling studio on Earl's retirement in 1958.

Car production continued until 1942, when the marque built the first cars to offer air conditioning, and only the second with automatic transmission.

Cadillac poster

The first Eldorado of 1953 was a limited edition to promote Cadillac's design leadership; just 532 were built.

Cadillac then pitched in with the war effort by making tanks, staff cars, and aircraft engine parts. Production of

civilian cars resumed in 1945, and in 1948 a new generation of cars featured tailfins inspired by the P38 Lightning fighter. The first Cadillac overhead-valve V8 arrived in 1949 – the year the marque's millionth car was sold – enabling American driver, Briggs Cunningham, to take tenth place at Le Mans in 1950; a Cadillacpowered Allard came third.

"Long as I was riding in a big Cadillac and dressed nice and had plenty of food, that's all I cared about."

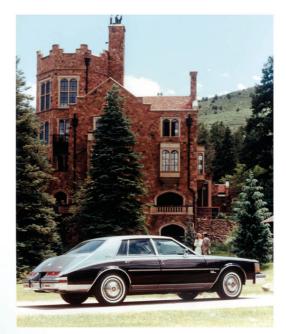

ETTA JAMES, NME MAGAZINE, 1978

Every Cadillac featured automatic transmission after 1950. Power steering was added in 1954, at the same time as a wraparound windscreen. In 1957 the high-tech Eldorado Brougham came with air suspension and electric memory seats as standard, plus a built-in bottle of Arpège perfume.

The '59 Cadillac range sported the tallest tailfins ever to be seen on a car, and became an instant pop culture icon, but after that the cars were toned down significatly. In 1967 Cadillac's remarkable new Eldorado coupé boasted front-wheel drive and a huge 7-litre, V8 developing 440 bhp. Its capacity increased to a massive 8.2 litres by 1970.

Cadillac's new generation of cars in 1975 included the comparatively compact new Seville, and they could all now take unleaded petrol. The car gained a controversial V8 diesel option in 1978, and retro styling inspired by classic Rolls-Royce limousines in 1980.

In stark contrast, and in the eye of a deep recession, the Cimarron of 1981 had a 1.9-litre four-cylinder engine, and also included Cadillac's first manual transmission for more than 30 years. Once prosperity returned in 1986, the marque launched its Allanté luxury two-seater, a rolling showcase for its all-new, 32-valve,

Cadillac Seville, 1980

The retro-style tail feature was a key design tenet for this Seville. An important departure for Cadillac was to offer this model with a diesel, V8 engine.

aluminium Northstar V8 engine, with bodywork designed and built by Pininfarina in Italy.

In 1996 Cadillac decided to stop building enormous saloon cars, while electing to sell

European-size saloons – an experiment that failed. A renaissance began in 1998 when the marque launched its first sport-utility vehicle, the Escalade, and the sharply styled CTS compact saloon of 2002 was, finally, a genuine match for some of Europe's executive sports saloons. The 2006 Cadillac BLS sold slowly in Europe, its intended market, but the STS mid-size saloon (2005),

full-size DTS (2006), and second-generation CTS (2008) models all did well in the US. In 2009, Cadillac survived GM's brush with insolvency, and its range of imposing luxury cars is now popular in China as well as in America.

CLASSICS OF THE FUTURE

CTS-V The basic CTS saloon was considerably beefed up to cope with the huge extra power from the Corvette engine, gaining a special cradle for the engine, huge brakes, and the Corvette LS6's manual transmission. The car could do 0-60 mph (0-96 km/h) in 4.6 seconds, and the combination of excellent weight distribution, taut suspension, generous torque, and a surprisingly capable chassis meant the CTS-V could lap Germany's Nürburgring circuit in 8 minutes 19 seconds - rivalling the accomplished Mercedes-Benz C55 AMG.

△ Cadillac CTS-V 2004

Origin USA

Engine 5,665 cc, V8

Top speed 163 mph (262 km/h)

The CTS-V saloon borrowed the 400 bhp, push-rod, V8 engine from the Chevrolet Corvette LS6, with a 6-speed manual gearbox.

ELR The car was first seen in public as the Cadillac Converj concept in 2009, and four years later, after some prevarication, it went on sale. It was a plug-in hybrid with a drivetrain derived from the Chevrolet Volt, its small petrol engine acting as the generator for power in the lithium-ion battery pack to drive an electric motor. In pure electric mode, the range was 39 miles (63 km). In 2016 the price was dropped significantly in an attempt to boost sales; the car's performance was also improved by 25 per cent.

 \triangle Cadillac ELR 2013

Origin USA

Engine Electric motor and 1,398 cc, straight-four

Top speed 106 mph (171 km/h)

An upscale alternative to the Tesla Model S, Cadillac's petrol-electric hybrid had styling that was redolent of the marque's heavyweight traditions

INNOVATION AND ENERGY

The mid-1960s was probably the pinnacle of unfettered driving enjoyment. Roads worldwide were still relatively uncrowded, in many cases speed limits did not apply, and engineers - working from opposing ends of the market spectrum - devised ways to push the boundaries of handling capability.

True supercars appeared in leaps and bounds. First, Jaguar's fabulous E-type of 1961 presented a breathtaking cocktail of speed, style, science, and value. Then Lamborghini's 1966 Bertone-designed Miura introduced mid-engined, racing-car style, trouncing even the beautifully honed machinery of Ferrari and Aston Martin.

It was also a golden decade for the small sports car, including the MGB, Alfa Romeo Duetto Spider, Fiat 124 Spider, and Triumph Spitfire. The genius concept of the Lotus Elan established a new paradigm in handling brilliance, while the sporty Ford Mustang ushered in the idea of unlimited buyer choices.

Innovation for everyone came as standard with the Mini. Its transverse engine and front-wheel drive delivered sure-footed control. The clever packaging started the trend for small cars that were roomy and practical.

The silken performance of the Wankel rotary engines from NSU Motorenwerke and Mazda excited technophiles. Simple, compact, and with a high power-to-

A railed revolution

The Wankel rotary engine, fitted to the NSU RO 80, promised simplicity and smooth performance. Poorly

designed and built, it proved unreliable and thirsty.

weight ratio, they had many advantages, although the widespread adoption of fuel injection to bolster engine performance was of more commercial importance.

Largely unnoticed, Japanese manufacturers were learning to build cars that were not only easy to drive but also durable and reliable. Not that they yet posed a threat to the establishment in Detroit - they were still in thrall to huge horsepower, massive engine capacities, and muscular styling.

"Adding power makes you faster on the straights. Subtracting weight makes you faster everywhere."

COLIN CHAPMAN, FOUNDER OF LOTUS

Key events

- ▶ 1960 The front-wheel drive, transverse-engined Mini draws a new template for roomy small cars, seating four adults in relative comfort.
- ▶ 1961 Jaguar unveils its E-type. With speeds of up to 150 mph (241km/h), it is one-third of the price of an equivalent Ferrari.
- ▶ 1962 Ford produces its 30-millionth V8 engine.
- ▶ 1963 Elegance and performance are combined in the new Mercedes-Benz 280SL roadster.
- ▶ 1963 The first of Porsche's long-lived 911 coupés makes its debut, replacing the much-loved 356.

\triangle A legend is born

Originally named the Porsche 901, a legal dispute with Peugeot, saw it rebranded the 911. Revised and updated many times, it is still in production.

- ▶ 1964 The Ford Mustang made its debut at the New York World's Fair; the Plymouth Barracuda is among America's first "muscle cars".
- ▶ 1965 Launch of the Rolls-Royce Silver Shadow, the first "Roller" without a separate chassis.
- ▶ 1966 End of the line for the Studebaker marque after 64 years.
- ▶ 1966 Toyota introduces the first of its hugely successful Corolla series.
- ▶ 1967 The NSU RO 80 is a futuristic executive saloon from Germany, complete with the first twin-rotor Wankel engine.
- ▶ 1968 Ferrari's 365 GTB4 Daytona is the world's most desirable supercar.

Sports Saloons

Performance had always been the preserve of open roadsters, but by the 1960s sports saloons were gaining ground. This inroad was fuelled by car-makers such as Ford and BMC turning out tuned versions of their family cars that made a good base for a circuit racing or rally competitor. Saloons were becoming more sophisticated, too, with disc brakes and independent suspension more common, and the adoption of light, stiff monocoque structures. It was all good news for drivers who wanted not just to enjoy their motoring but also to share it with a few friends.

Impressive instrumentation

Jaguars always blended style and substance, and the well-stocked dashboard was designed not only to look good but also to present useful information to the driver. The speedometer and tachometer were directly in front of the driver, with auxiliary gauges, light switch, accessory switches, and the ignition switch located at the centre.

Smooth six

Mk2s were available with three versions of Jaguar's smooth, twin-cam, straight-six XK engine, in 2.4-litre, 3.4-litre, and 3.8-litre guises. The 3.8 had twin SU carburettors and a gross output of 220 bhp. The more powerful car was the enthusiast's choice.

Origin UK

Engine 1,275 cc, straight-four
Top speed 100 mph (161 km/h)

The Mini was never meant to be a performance saloon. Formula 1 boss John Cooper spotted its potential, tuning the car's engines and adding disc brakes to exploit the Mini's fantastic roadholding abilities. A multiple Monte Carlo Rally and British Saloon Car Championship winner, it was an exciting car for the open road.

√ Volvo 122S 1961

Origin Sweden

Engine 1,778 cc, straight-four

Top speed 100 mph (161 km/h)

This was a rugged yet capable sports saloon car, with a twin-carburettor engine and 85 bhp. Later, a 123 GT with 100 bhp became available. These were spirited performers, especially when fitted with the optional overdrive. Designated by numbers in most markets, they were known as the Amazon in Sweden.

⊳ Renault 8 Gordini 1964

Origin France

Engine 1,108 cc, straight-four

Top speed 106 mph (171 km/h)

The Gordini version of the R8 arrived in 1964, an upgrade from the regular, boxy model that had been released two years earlier. It offered 49 bhp from its 1,108 cc twin-carb engine, delivered through a close-ratio manual gearbox with four speeds (the regular R8 had only three).

Mirrors follow new fashion for matt-black accessories

High-revving straight-six engine

Wheel arch extensions fitted front and rear

Engine 1,998 cc, straight-six

Top speed 124 mph (200 km/h)

The twin-camshaft engine in the GT-R turned the humdrum Skyline saloon into a serious race winner that notched up 50 race wins in its first three years. Power was delivered to the rear through a five-speed gearbox, and there was semi-trailing arm independent rear suspension.

Austin-Healey 3000

Acclaimed former rally driver and engineer Donald Healey became a car manufacturer in his own right in 1946. He wanted to build a high-performance, inexpensive sports car, and achieved that with the Healey 100. Launched at the London Motor Show in 1952, the two-seater roadster featured a powerful 2.6-litre, four-cylinder engine from the discontinued Austin Atlantic. The Austin Motor Company was so impressed that it struck an instant deal.

LAUNCHED IN 1959 the 3000 was the third incarnation of the "Big" Healey design, following the 100 and 100-6. It adopted the British Motor Corporation's, gutsy, new 3.0-litre, six-cylinder engine, and had powerful front disc brakes as standard to counteract its lively acceleration. Overdrive was an optional extra on the fourspeed manual gearbox.

The 3000 was the epitome of late 1950s' sports-car style, and looked especially rakish with its spoked wheels and two-tone bodywork. Yet, surprisingly, most were sold as four-seaters with two small, child-friendly seats in the back – the two-seater was a rarity even in the US, which was always seen as the car's top market.

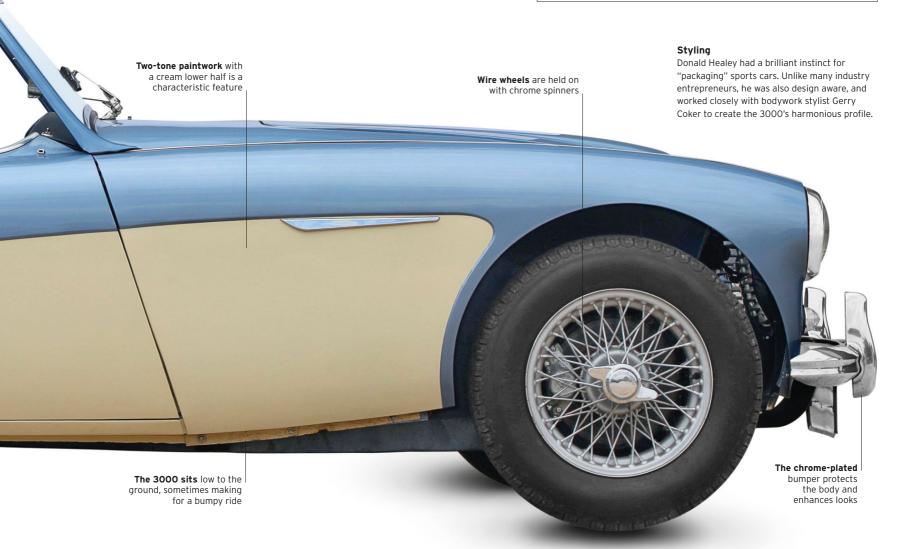

Austin-Healey badge

This badge was created after Donald Healey and Austin, part of the British Motor Corporation (BMC), joined forces. The Austin-Healey 3000 was larger and more powerful than BMC's MG TF and MGA; all three sports cars were exported in significant numbers.

SPECIFICATIONS	
Model	Austin-Healey 3000 Mk I BN7, 1959-61
Assembly	UK
Production	13,650
Construction	Ladder-type chassis, welded steel body panels
Engine	2912 cc, straight-six
Power output	124 bhp at 4,600 rpm
Transmission	4-speed manual with optional overdrive
Suspension	Front independent, rear live axle
Brakes	Front discs, rear drums
Maximum speed	114 mph (183 km/h)

ON THE ROAD

Austin-Healeys were intended for fast, open-top motoring and so, despite the beautiful exterior, they were quite basic inside to keep their weight and bulk to a minimum. With a low centre of gravity – and the car's predictable road manners allied to its eager performance – this made them excellent for rallying. The model's major victories included the punishing 1960 Liege–Rome–Liege rally in the hands of Pat Moss, sister of famous racing driver Stirling Moss. The 3000 Mk II of 1961 introduced a triple-carburettor engine, while the 1963 Mk III was the most powerful of all, with 150 bhp of thrust, and offered a more comfortable cockpit. The last 3000 was made in 1967, and to the dismay of enthusiasts the model was never replaced.

Two marques in one sports car brand
 3. Wire wheel spinners carry helpful instructions
 4. Headlamp with indicator light below.
 5. Chrome-plated overriders to ward off low-speed bumps
 6. Reflector lens embedded in rear wing
 7. No-frills cockpit aimed at keen, fast drivers; accommodation snug
 8. Speedometer reads up to 120 mph (193 km/h), actual top speed was 114 mph (183 km/h)
 9. 3-litre six-cylinder engine with twin carburettors (on the right)

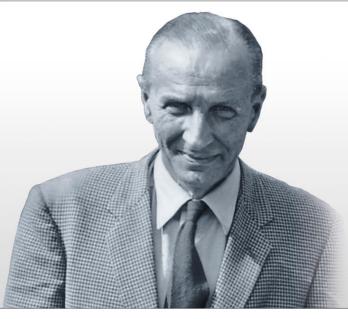

Great Designers Sir Alec Issigonis

In Sir Alec Issigonis the world witnessed a true genius of automotive design, who single-handedly set the template for the modern small car. He was an exceptional talent with genuinely unique and radical ideas. An iconoclast and an outsider, Issigonis was also an individualist, and it is a tribute to his vision that his creations - the Morris Minor, Austin 1100, and the Mini - proved so popular.

Career highlights

- ▶ 1936 Issigonis joins Morris, working on suspension systems. World War II prevents his suspension for the Morris 10 from going into production. It is later used on the MG YA of 1949
- ▶ 1948 The first all-Issigonis design, the Morris Minor, is an instant bestseller
- ▶ 1959 The Mini Issigonis's masterpiece, and quite possibly the world's most significant car - stuns the public on its debut. It sets the design pattern for the modern small car
- ▶ 1962 Another front-wheel drive masterpiece, the Austin/Morris 1100, is launched to huge acclaim

△ Austin/Morris 1100, 1963

With a surprisingly large interior considering its size, the 1100 was launched by BMC in 1962 as a four-door family saloon. It featured front disc brakes, front-wheel drive, and novel Hydrolastic fluid suspension.

- ▶ 1967 The Royal Society makes Issigonis a fellow, and he is knighted two years later by Queen Elizabeth II
- ▶ 1969 Issigonis is appointed Special Developments Director at British Leyland
- ▶ 1971 After retiring Issigonis remains active, producing designs for experimental gearless transmissions and steampowered cars

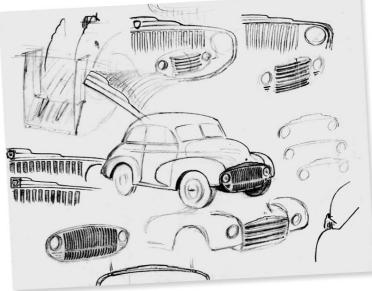

BORN IN SMYRNA (now Izmir), Turkey, in 1906 to a Greek father and German mother, Alec Issigonis came to the UK with his family in 1922, when he was 15. His talent for drawing was quickly recognized, and he studied engineering at Battersea Polytechnic, but failed to pass his exams.

Issigonis became a keen racing driver, piloting his modified Austin Seven racer, and joined an engineering consultancy, working on transmissions. After spells at Humber and Austin he was taken on by Morris in 1936, for whom he designed the

independent front suspension of the MG YA.

The Morris Minor, which was produced from 1948 to 1971, was entirely Issigonis's project. It pioneered Morris's use of unitary construction and was highly space-efficient. Issigonis had wanted to use front-wheel drive; but to his disappointment, the rush to production after the war forced the company to stick with rear-wheel drive instead.

Issigonis resigned in 1952, when Morris merged with Austin to form the British Motor Corporation (BMC). He took a new position at Alvis, where he designed a V8-powered saloon that featured the world's first hydraulic suspension with a front-to-rear interconnection. Sadly, Alvis couldn't afford to build it, so Issigonis returned to BMC in 1955 at the invitation of Sir Leonard Lord, BMC's chairman.

Sketches

These drawings, made in 1944, show Issigonis's radiator grille and headlamp ideas for the Mosquito, which would eventually enter production as the Morris Minor.

SUBSTANCE OVER STYLE

Alec Issigonis may have accepted the accolade "great designer", but he would have been horrified to have heard himself called a "stylist". The notion of "style" as propagated in America in the 1950s was the antithesis of Issigonis's approach. He preferred to describe himself as an "ironmonger".

Issigonis would sketch out ideas with brilliant ease, handing them to draughtsmen to turn them into technical drawings. Sometimes the sketches – which bore a striking resemblance to those of Leonardo da Vinci – would be on envelopes or

"When you're designing a new car for production, **never**, **never** copy the opposition."

SIR ALEC ISSIGONIS

FRONT GRILLE AND NOSE, MORRIS MINOR 1949

MINI 1959

restaurant napkins. Issigonis's self-belief bordered on arrogance. His dislike of "luxuries" such as radios and seatbelts meant that he simply created his cars without them. He reviled the process of designing by committee, had no time for market research, and was probably the last person able to design a mass-produced car single-handedly.

MINI MAGIC

Sir Leonard Lord gave Issigonis completely free rein when designing BMC's new small car, the Mini. No car encapsulates the Issigonis ethic like this icon of motoring history. Compared to the utterly revolutionary. The engine was mounted

wheels. More remarkably still, the gearbox was positioned under the engine to save space, and it shared the same lubricating oil as the engine. The wheels were tiny, too: at 10 in (25 cm) across, they freed up extra interior space.

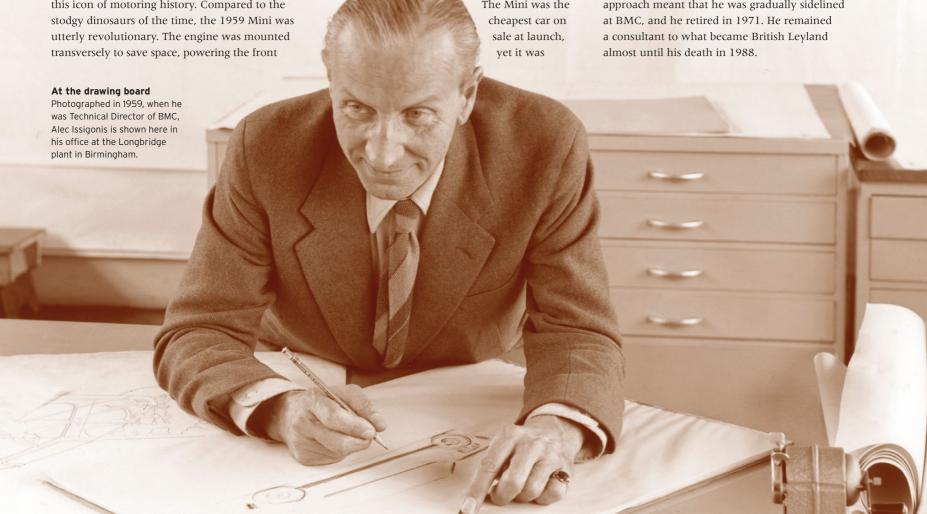

Only 10ft (305cm) from bumper to bumper, the Mini was a miracle of packaging, able to carry four adults and luggage in relative comfort. Issigonis calculated the smallest space needed for four passengers and became obsessed with saving space

> in the rest of the design wherever he could. The Mini was the cheapest car on sale at launch,

quicker and more agile than many of the socalled sports cars of the day. All other car-makers eventually adopted the Mini's packaging and front-drive layout for their own small cars. As for "styling", the Mini was never styled as such: form merely followed function.

In parallel with the Mini, Issigonis worked on BMC's Austin/Morris 1100, which became Britain's bestselling car for much of the 1960s. However, the same front-wheel drive format faltered when applied to the larger Austin/Morris 1800.

Issigonis's single-minded and non-collaborative approach meant that he was gradually sidelined at BMC, and he retired in 1971. He remained a consultant to what became British Leyland

Sir Alec Issigonis poses with two examples of his world-famous Mini

Great Marques The Mini Story

Mini is now a fully fledged car brand encompassing estates, coupés, sports, and racing models, but at its heart lies a revolutionary small car, based on a design conceived by Sir Alec Issigonis in the mid-1950s. Now owned by BMW, the firm continues to build on the little car's success.

THE MINI WAS THE BRAINCHILD of vehicle design genius Sir Alec Issigonis, who had arrived at Morris Motors in 1932 to work on suspension systems, but went on to create the famous Morris Minor. Despite Morris founder Lord Nuffield hating its styling and likening it to a poached egg, the Minor was a massive sales success, becoming the first British car to attract 1 million buyers, partly because it was spacious, in spite of its small size, and handled well – things that would also make the Mini popular.

When Morris merged with archrival Austin in 1952 to form the British Motor Corporation (BMC), Issigonis left and went to work for military vehicle and luxury car-maker Alvis, but BMC boss Sir Leonard Lord asked him back in 1955. The company was looking to produce a new, small, affordable, saloon that was able to compete with the tiny, three-wheeled bubble cars dominating the market at the time – the German-made

Morris Mini Minor, 1959

The appeal of the Mini sprang from the highly sophisticated design it offered at an affordable price. Near-identical cars were initially sold under the Austin and Morris brands.

Messerschmitt and Heinkel. The task was made all the more urgent by soaring petrol prices and fuel rationing following the 1956 Suez Crisis so development on the new car was accelerated.

Rumour has it that Issigonis sketched out the basic Mini template on a

tablecloth, and, to get the footprint of the 10-ft (3-m) car, he drew a chalk rectangle on the floor around four chairs. The car was known as ADO15, designed to conform to BMC's requirement that it seat four using an existing engine.

Issigonis met this challenge with an innovative car that broke the mould. His creation had a four-cylinder, water-cooled, transverse engine, front-wheel drive, and four-speed transmission. Its fabulously compact dimensions aided handling and saved space – 80 per cent of which was given over to passengers and their luggage.

Morris Mini-Traveller brochure, 1960

For once, the BMC advertising department were not overstating the case with their publicity.

Once the Mini project was approved, Issigonis was given a year to rush the car into production. He oversaw everything, including designing the tools to make it. However,

after its launch in 1959 the car revealed some teething problems, including leaking floor panel gaps due to the fact that, as Issigonis later admitted, he had designed them the wrong way round. However, the public embraced the car and the Mini was an instant hit.

Issigonis did not like compromise or taking advice. He believed cars needed to be uncomfortable to keep their drivers alert, and that radios were pointless luxuries, and so the Mini did not have space for one. What it did have though, was interior storage in its hollow doors – supposedly the right size for his favourite bottle of gin.

The Mini offered space, brilliant handling, and economy, became a part of the culture of the "Swinging Sixties", and was driven by everyone from the Beatles to Princess Margaret. It even had a starring role in the 1969 film *The Italian Job* with Michael Caine.

In 1961 racing car legend and car-maker John Cooper put his name to performance Minis, and soon Mini Coopers became icons in their own right. The powerful S version had a racing-tuned, 1,071 cc engine, marking it out as a formidable competition car. It went on to dominate the Monte Carlo Rally in the mid-1960s, securing victories in 1964, 1965, and 1967.

The original model started life with rubber cone suspension, which was ditched in 1964 in favour of an interconnected hydrolastic system. When this was abandoned in 1971 due to unreliability and cost, the earlier, rubber suspension returned.

"I'm the last of the Bugattis, a man who designed whole cars. Now committees do the work."

SIR ALEC ISSIGONIS, DESIGNER OF THE ORIGINAL MINI ON HIS DESIGN PHILOSOPHY

Issigonis meanwhile started work on a replacement for the Mini. The 9X was lighter and shorter than its predecessor and looked good on paper, but this car never made it past the prototype. Instead, the Mini, which was still selling well, was given a facelift. Marketed alongside the classic "round front" model, the Clubman version launched in 1969, and featured a squared-off nose and repositioned instruments. The original car was still in production, although Minis now came with wind-down rather than sliding windows. In 1980 another replacement, the Austin Metro, was also sold alongside the Mini, which continued as a modern classic until 2000.

In 2001 Mini's new owner BMW revealed an all-new model. An immediate success, this car was bigger inside and out, had an updated design, and

fun driving characteristics, without the noise, hard ride, and upright driving position of the original. From its inception at the former Morris factory in Cowley, Oxfordshire, the Mini and its adaptations have

become enormously popular worldwide. Issigonis's innovative design revolutionized the small car, and it remains one of Britain's best-loved motors.

how little this car changed.

CLASSICS OF THE FUTURE

Cooper S JCW GP This is perhaps the ultimate version of the first, 2001-launched, BMW-era Mini. Only around 2,000 of these cars were built. signing it off before the Mk2 arrived. The supercharged 1,600 cc engine pushed this car from 0-60 mph (96 km/h) in 6.5 seconds. It was robust and capable of providing enormous amounts of fun, thanks to its pin-sharp handling.

△ Mini Cooper S JCW **GP 2006**

Origin UK

Engine 1,600 cc, four-cylinder **Top speed** 149 mph (240 km/h) shape with carbon-fibre rear wing meant this little car could slice through the air with 218 bhp. Lack of rear seats added to its lightness.

Cooper S Coupé The Coupé was only the second Mini to have a conventional boot lid (the original had a drop-down version), a styling tweak that provided 280 litres (9.8 cubic feet) of luggage space. This nippy two-seater promised driving enjoyment, particularly the Cooper S and JCW turbocharged versions, which produced 181 bhp and 208 bhp respectively. With a distinctive rear electric spoiler and roomy interior, the Coupé mixed fun and style with bags of practicality.

∧ Mini Cooper S Coupé 2014

Engine 1.600 cc. four-cylinder **Top speed** 146 mph (235 km/h)

Greener faster and quieter than its predecessors, the Coupé did not scrimp on roof", raked front headlights, and spacious interior.

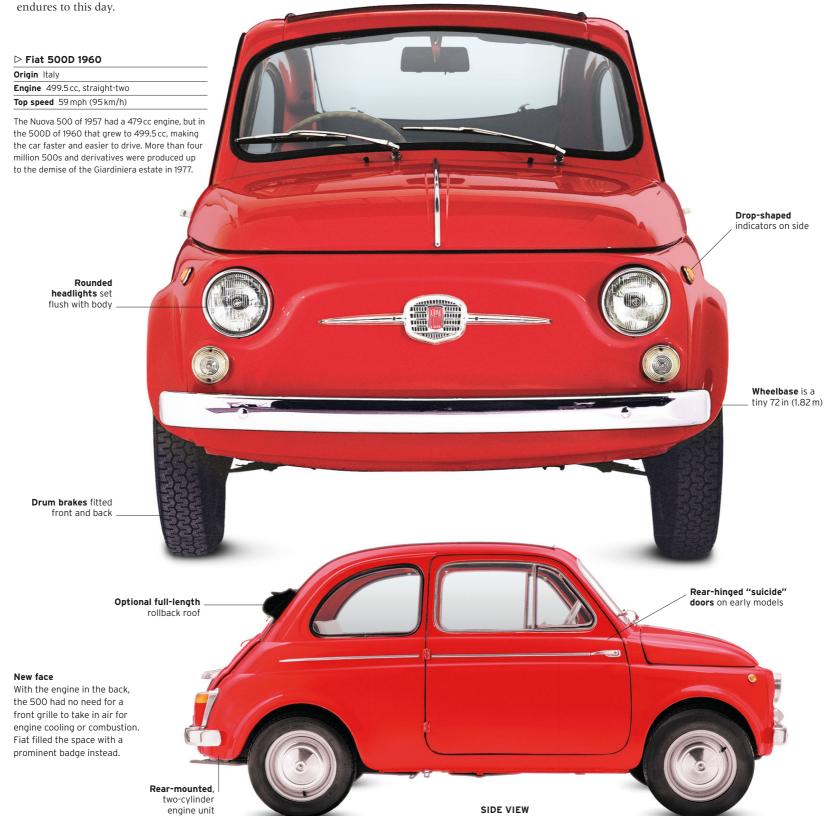

Very Small, Very Cute

Small cars became big news. With more and more people living in cities, and traffic overwhelming the road networks of London, Paris, and Rome, tiny cars were one solution for beating the traffic jams – and their size made parking much easier. There was no real consensus on the best layout for a really small car. Fiat opted to place its engine at the rear, and the Rootes Group followed suit with its Imp, but Alec Issigonis went for frontwheel drive and a transverse engine for the Mini, setting a pattern for small cars everywhere which

Cute and compact

The Nuova 500's interior was tiny, but there was just enough room for two adults in the front and a couple of children behind. The simple dashboard included a speedometer enclosed in a pod, and very little else. The floor-mounted gear lever and small steering wheel gave a feeling of control.

Tiny 50 in (1.27 m) wheelbase

Engine 875 cc, straight-four
Top speed 78 mph (126 km/h)

The Rootes Group's small car had a superb aluminium engine in the back, and a lift-up rear window for easy loading. The Imp sold around half a million units over 13 years, but was held back by reliability problems and was hugely outsold by the Mini.

Amphicar 770

The most successful contender in an admittedly very small field, this German-built, amphibious vehicle was exported around the world in the 1960s. An undoubted oddball, it even developed a small cult following in the US, where around 3,000 examples were sold, and survivors are still highly collectable. In 1968 an attempt by two owners to cross the English Channel in a pair of cars proved successful, although to the delight of waiting reporters, one finished the voyage being towed by the other.

car remains watertight, but corrosion

is still a problem

Amphicar badge

If the name was not enough of a clue as to the car's identity, the wave pattern at the base of the A-shaped bonnet badge provided a clear indication of its creator's hope that adventurous owners would dive right in.

SPECIFICATIONS	
Model	Amphicar 770, 1961-68
Assembly	Lübeck, Germany
Production	3,878
Construction	Unitary steel construction
Engine	1,147cc, flat-four
Power output	43 bhp at 4,750 rpm
Transmission	4-speed manual
Suspension	Coil springs front and rear
Brakes	All-round drums
Maximum speed	70 mph (113 km/h) on land, 7 knots on water

The chassis-less body is made of steel rather than plastic like many of its amphibious descendants

Styling

Unlikely to win an award for its looks, the Amphicar's styling was nevertheless clean and distinctive. Small fins at the vehicle's rear looked fashionable and defended the flanks from waves, but the short wheelbase, cutaway arches, and high ground clearance could look a little strange parked alongside more conventional models.

ON THE ROAD

The Amphicar was a descendant of the four-wheel drive Volkswagen Schwimmwagen. Developed from the original VW Beetle, this small, amphibious, Jeep-like vehicle was used by the German army in considerable numbers from 1942 onwards.

With financial backing from Deutsche Industrie-Werke, the Amphicar's designer, Hans Trippel, set out to create a vehicle based on the same principles, but intended purely for recreational purposes. The Model 770 was launched at the New York Auto Show in 1961, and despite offering only limited performance compared to most cars or boats it became the only amphibious civilian passenger vehicle to be mass-produced. Several thousand were manufactured by the Quandt Group until 1968, when the design was unable to meet newly introduced safety regulations in the US.

- 1. Red and green navigation lights 2. Fuel filler cap and chrome cleat
- 3. Externally-mounted horn 4. Chrome decorative detailing typical of period
- 5. Removable bonnet key 6. Registration number repeated on bodywork
- 7. Fins contain rear light cluster
 8. Controls for water and land use
 9. Cream-coloured throttle controls speed on water
 10. Snug rear seating for two
 11. Separate engine powers rear propellers
 12. Propellers either side of car drive it through water

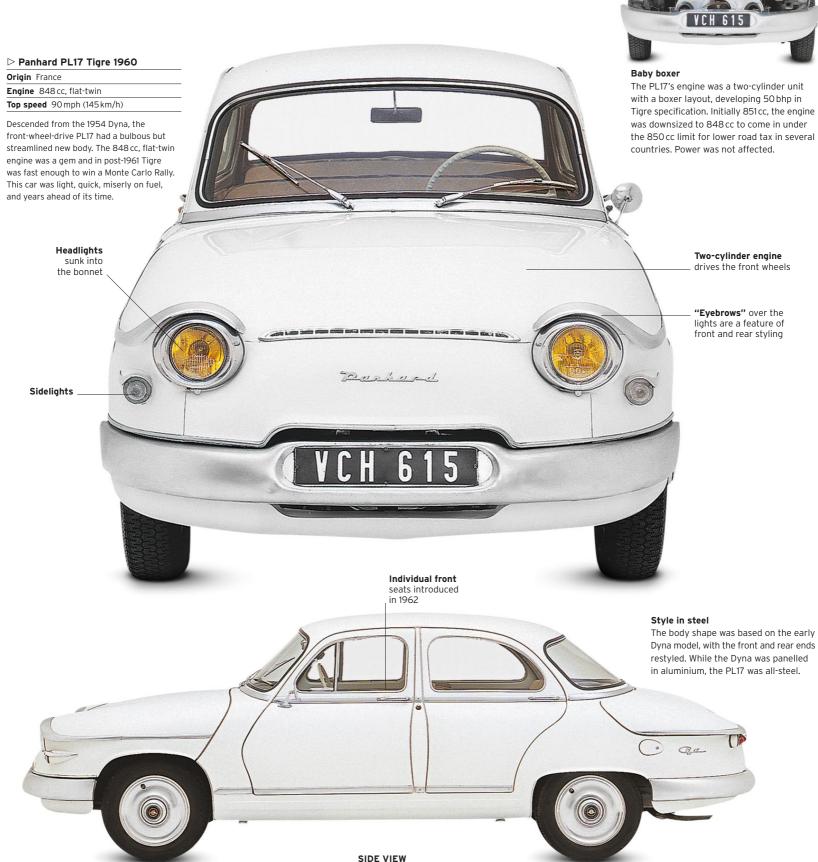

Family Cars

Mass-market cars of the 1960s were often built to template, with a four-cylinder engine at the front, driven wheels at the back, and styling that did little to excite. There were plenty of exceptions, however. The best of the family cars of the era were often clever in their design and thorough in their execution. Manufacturers such as Panhard and Lancia may have been on a downward curve, but there were new car-makers to replace them – notably from the growing motor industry of Japan – and model nameplates were born that would remain familiar for decades to come.

Origin Italy

Engine 1,488 cc, flat-four

Top speed 93 mph (150 km/h)

This is the sort of car that made many a British saloon look impossibly oldfashioned. The Flavia had an all-aluminium, flat-four engine, front-wheel drive, dualcircuit servo disc brakes, and radial tyres. In 1963 the engine became 1.8 litres, and fuel injection was added in 1965.

$\operatorname{\triangleleft}$ Ford Cortina MkI GT 1963

Origin UK

Engine 1,498 cc, straight-four

Top speed 94 mph (152 km/h)

While Ford of Germany was innovating with the front-wheel-drive Taunus, the Cortina was clever not for its engineering but because of its focus on what real car buyers wanted. This resolutely conventional car was popular for its low-friction oversquare engine, synchromesh gearbox, and spacious body.

▶ Renault 16 1965

Origin France

Engine 1565 cc, straight-four

Top speed 100 mph (161 km/h)

Replacement for the slow-selling Frégate, the 1965 Renault 16 introduced hatchback body styles to mid-range family cars. It had a novel drivetrain, with the gearbox at the front and the longitudinal engine behind it. Spacious, versatile, and comfortable, it was in production until 1980.

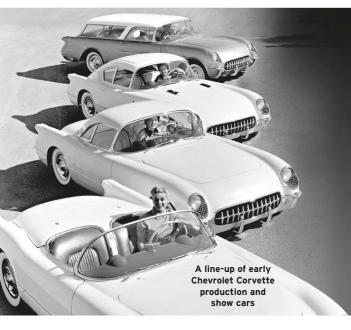

$\mathrel{ riangleleft}$ Toyota Corolla 1966

Origin Japan

Engine 1,077 cc, straight-four

Top speed 85 mph (137 km/h)

The first of an incredibly successful line, the Toyota Corolla was conventional and unremarkable in its design, but was well put together and dependable. The model made an ideal family car, and exports to the US began in 1968.

Great Marques The Chevrolet Story

Between 1946 and 1976 Chevrolet was the bestselling brand of car in the US. After it adopted V8 engines in the 1950s, Chevrolets, like the Bel Air, Corvette, and Camaro, became synonymous with speed and power, although the range would always be enormous and all-encompassing.

THE CHEVROLET AROSE FROM the

short-lived partnership between Swiss-born racing driver Louis Chevrolet and motor industry tycoon William C. "Billy" Durant, the business brains behind General Motors (GM). In November 1911 the pair cofounded the Chevrolet Motor Car Company, and a year later

they unveiled a touring car whose rapid performance and 65-mph (105-km/h) top speed came from a 4.9-litre, six-cylinder engine.

Durant was ousted from GM in 1910 and wanted to build another big corporation. But Chevrolet, whose dashing image the car carried, yearned to make high-performance machines developed with racing know-how. Their differences proved irreconcilable; and Durant bought Chevrolet out in 1913, and then took GM over with it.

Louis Chevrolet

The mustachioed Swiss-born racing driver, driving goggles at the ready, is seen here in his favourite environment - behind the wheel

Chevrolet launched its first V8 car, the Model D, in 1918, but it was actually the robust, four-cylinder Superior of 1925, with its smart disc

wheels and lustrous cellulose paint, that sent sales soaring. In 1927 Chevy sales topped a million.

Throughout the 1930s Chevrolet offered an ever-broader roster of cars that, by 1941, encompassed station wagons and power-top convertibles. In 1950 automatic transmission made its Chevrolet debut. Its biggest technical milestone yet came in 1955, when the "small-block" V8 engine arrived – the most successful unit of that configuration ever, with more than

100 million made. Used in countless Chevrolets, as well as by other GM divisions, the powerful and compact small-block V8 became the bedrock of American hot-rod culture for a generation.

The small V8, additionally, rescued the fortunes of the Chevrolet Corvette sports car. This ground-breaking roadster, introduced in 1953, pioneered fibreglass bodywork on a production car, but its straight-six cylinder engine rendered it a feeble machine. A small-block V8 transplant transformed it into a fiery performer, and the Corvette became an American institution.

In comparison, the Corvair of 1960 was a disaster. Worried by the massive US sales of Germany's Volkswagen, Chevrolet decided to imitate its concept. The Corvair had an air-cooled, flat-six engine, rear-mounted as in the Volkswagen, and clean, modern styling. But it was tail-heavy, leading to some alarming accidents and allegations from consumer groups that Chevrolet had launched the

"We've always said that there's a little bit of Corvette in every Chevrolet, and that's still true."

JIM PERKINS, CORVETTE DESIGN MANAGER, SPEAKING AS THE MILLIONTH CORVETTE WAS BUILT IN 1992

car while knowing it had shortcomings. As a result, US car-makers had to adopt safety measures such as seatbelts, crumple zones, and airbags.

Throughout the 1960s and 1970s Chevrolets exemplified the American car, whether it was the full-size Impala (first seen in 1958), the compact Chevelle, the stylish Monte Carlo and Camaro coupés, the El Camino pick-up, or the 4x4 Blazer. And, like other US car-makers, it suffered in the economic crises of the late 1970s and early 1980s. This led to moves such as the launch of the Chevette, Chevrolet's edition of the GM ultracompact "T Car" in 1975, the Chevy Citation version of GM "X Car" front-wheel-drive platform in 1979, and the 1982 Cavalier spin-off of the GM

Chevrolet Chevelle SS, 1970

With a huge 7.4-litre V8 engine pumping out 380 bhp, this Chevelle was a muscle car totem, perfectly suited to its era.

"J Car". To offer more fuel-efficient vehicles in the 1980s, Chevrolet imported small cars from Isuzu, Toyota, and Suzuki. More recently, to boost its low-emissions credentials, Chevrolet has blazed a trail for plug-in hybrid cars with its Volt.

In 2009 GM came close to bankruptcy. Its Oldsmobile, Pontiac, and Saturn divisions went, leaving Chevrolet as both its entry-level brand and also, via the latest incarnations of the venerable Camaro and Corvette, its highperformance standard-bearer.

CLASSICS OF THE FUTURE

Corvette ZO6 The most noticeable feature of the sixth-generation of America's star-spangled sports car were its headlights, under plastic fairings rather than of the pop-up variety. The ultra-high-performance Z06 had a lightweight alloy chassis, and the hand-built V8 engine was both the biggest-capacity Chevrolet small-block ever and, at 505 bhp, the most powerful non-turbo engine ever seen in a car from General Motors.

△ Chevrolet Corvette Z06 2005

Origin USA

Engine 7,011 cc, V8

Top speed 207 mph (332 km/h)

Carbonfibre and balsa wood were among the lightweight materials in the Z06 edition of the Corvette C6; it could sprint from 0-60 mph (96km/h) in 3.6 seconds.

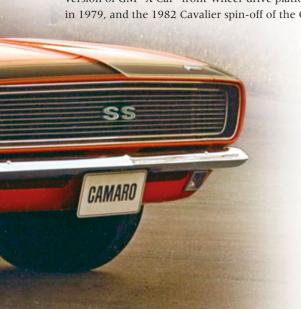

Chevrolet Camaro The first Camaro appeared in 1967 as Chevrolet mounted a credible rival to the best-selling, sporty Ford Mustang. This 2010 model aimed to recapture much of the appeal and aura of the original, both in terms of compact good looks and surging performance. The car shared its basic platform with several Holden models from GM's Australian division, and in 2011 it was joined by a convertible. In the same year, the Camaro began to be widely exported.

∧ Chevrolet Camaro 2010

Engine 6,162 cc, V8 **Top speed** 155 mph (250 km/h)

The macho new Camaro was available with either sixspeed manual or five-speed automatic transmission, the latter with 20 bhp less from the 6.2-litre V8 engine.

Sporty US Coupés

Muscle cars powered onto the American motoring scene in the 1960s, driven by ever-larger and more sophisticated V8 engines. The biggest cars were well over 7.0 litres and produced around 400 bhp. Competitive racers were even more powerful. Ford's 427 cu in big-block and Chrysler's renowned 426 cu in "Street Hemi" were both used in NASCAR racing and NHRA/AHRA drag events. Insurance costs and emissions worries would spell the end for the big engines eventually, but that would be a problem for another decade – during the 1960s it was all about power.

Swivelling bucket seats are standard

Distinctive louvred rear pillars

Buick's nailhead

Renowned for their high torque output, Buick's unusually designed "Nailheads" were so named for their small, vertical valves that resembled the tops of nails. The V8 engines often idled poorly due to the race-type cam profiles they used to compensate for the small valves. The Riviera was produced in 401cu in (6.6-litre) and 425 cu in (7.0-litre) versions, which were the last of the type before Buick replaced them with the all-alloy small block in 1963.

 $\operatorname{\lhd}$ Ford Mustang Fastback 1965

Origin USA

Engine ranges from 2.8-litre

sixes to 4.7-litre V8s

Engine 4,727 cc, V8

Top speed 116 mph (186 km/h)

Its low base price, combined with a long list of optional extras available, meant more than a million Mustangs were sold in the first two years of production. The styling was so universally loved that it won the Tiffany Award for Excellence in American Design.

∇ Buick Riviera 1964

Origin USA

Engine 6,967 cc, V8

Top speed 115 mph (185 km/h)

GM's design supremo Bill Mitchell wanted "a cross between a Ferrari and a Rolls", and the handsome Riviera was the result. Prodigious, straight-line urge came from a large V8 engine, driving through a two-speed, automatic transmission. Buick capped production at 40,000 a year to maintain exclusivity.

Optional remotecontrol mirror

Unique proposition

Unlike most GM cars, the Riviera's body and chassis were unique. With a shorter wheelbase and overall length than the contemporary Buick LeSabre, its subtle styling set it apart.

Rear suspension uses live axle on coil springs

The Riviera shared its suspension layout with others in the Buick stable, but its lighter weight meant that it handled better and was quicker in a straight line, making it more of a driver's car.

▷ Oldsmobile Toronado 1967

Origin USA

Engine 6,970 cc V8

Top speed 135 mph (217 km/h)

An automotive milestone and the most desirable Olds ever, this extraordinary powertrain had a big V8 driving through a unique chain-and-sprocket-drive automatic transmission to the front wheels. Despite its outstanding road manners and speed, it was several years before it won over conservative American car buyers.

□ Dodge Charger 1968

designed specially for the Toronado

 ${\bf Origin} \ {\bf USA}$

Engine 7,212 cc, V8

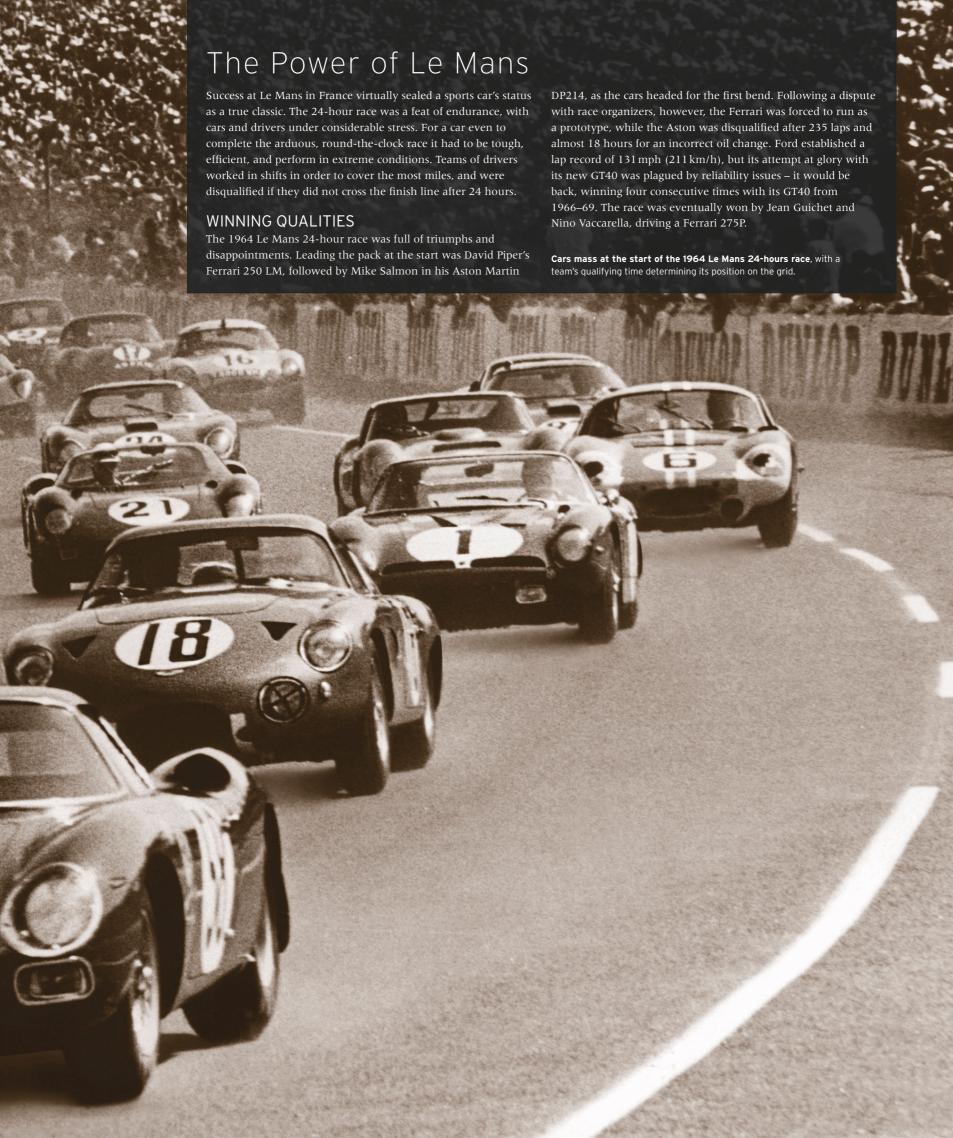

Top speed 120 mph (193 km/h)

"Dodge Fever" arrived in 1968 with record sales for the marque, helped by the new, super-smooth "Coke bottle-" styled Charger V8. R/T stood for Road/Track and denoted a specification that included the largest available engine (the famed 426 Hemi was an option), and "bumblebee" stripes.

LUCAS

Luxury Limousines

Royalty, heads of state, captains of industry, and other VIPs were well served by the most luxurious saloons of the 1960s. As was standard in the US car industry, updated versions of American limousines appeared annually. In Europe, however, cars of this class endured for many years almost unchanged. Mercedes-Benz, Rolls-Royce, and Jaguar/Daimler all made super-luxury limos that survived from the 1960s to the 1980s or 1990s. The hand-crafted wood and leather interiors of these cars assured a comfort and class that was fit for royalty: Queen Elizabeth II always preferred cloth seating for her state limousines.

1960s splendour

The Continental's interior was all about opulence and absence of effort. The thin-rimmed steering wheel was power assisted, as were the brakes, while the mirrors had remote adjustment and the transmission was, of course, automatic. Chrome and aluminium trim together with walnut veneers (on some cars) completed a look of elegant sophistication and glamour.

Suicide doors

Rear-hinged "suicide" doors were adopted to provide better access to the rear seats. They also gave the Continental an air of classic luxury. Both saloons and convertibles had four doors.

Roof mechanism

Convertible Continentals had a complex electrohydraulic system to raise and lower the roof. The rear deck lid was hinged at the back, and opened up to allow the roof to fold down underneath before closing again.

Engine 5,522 cc, V8

Top speed 99 mph (160 km/h)

A Russian-built copy of a 1955 Packard, the Chaika was built until 1981. The car was strictly for party officials, academics, scientists, and other VIPs in the 1960s who were approved by the Soviet government, and was used by Fidel Castro, Nikita Khrushchev, and the KGB.

□ Bentley S3 Continental 1962

Origin UK

Engine 6,230 cc, V8

Top speed 113 mph (182 km/h)

The stately Bentley S3 sired the coach-built Continental, most of them bodied by H.J. Mulliner in aluminium and with sportier lines. Lighter, and with more power, these cars were quicker than the steel-bodied saloons. The four-door version was known as the Flying Spur.

⊳ Mercedes-Benz 600 1963

S3 saloon

Origin Germany

Engine 6,332 cc, V8

Top speed 130 mph (209 km/h)

From 1963 until as recently as 1981, Mercedes offered this large saloon for VIPs to travel in. The cabin was insulated and the car reached speeds of up to 120 mph (193 km/h). A long-wheelbase version with six doors was available, but only 2,677 Mercedes 600s were built.

Origin USA

Engine 7,030 cc, V8

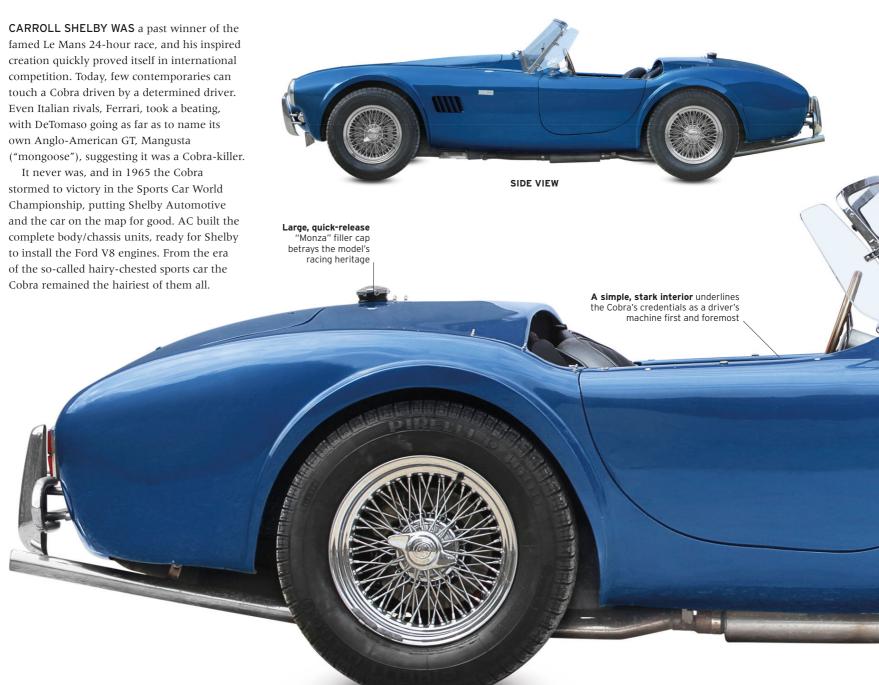

Top speed $120 \, mph \, (193 \, km/h)$

Every Cadillac was a luxury car; this model featured curved side windows, remote-controlled exterior mirrors, power brakes and steering, and, of course, automatic transmission. The similar but even more lavishly equipped De Ville model added electric windows and electric seats, with air conditioning and leather trim as optional extras.

Shelby Cobra

The AC Ace was transformed into an international star when Texan racing driver Carroll Shelby conceived the idea of installing a large American V8 engine in a small, lightweight, British sports car. Although the Anglo-American hybrid was crude, it was sleek and effective, and enjoyed success both on the track and in the showroom. As such, the car has remained in sporadic production since its first appearance in 1962.

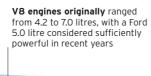

Shelby Cobra badge

This image of a cobra rearing its fierce head was the emblem found on the bonnet of all the cars sold by Shelby in the US market. AC Cars sold a small number of the cars in the UK, but without the Cobra trademark.

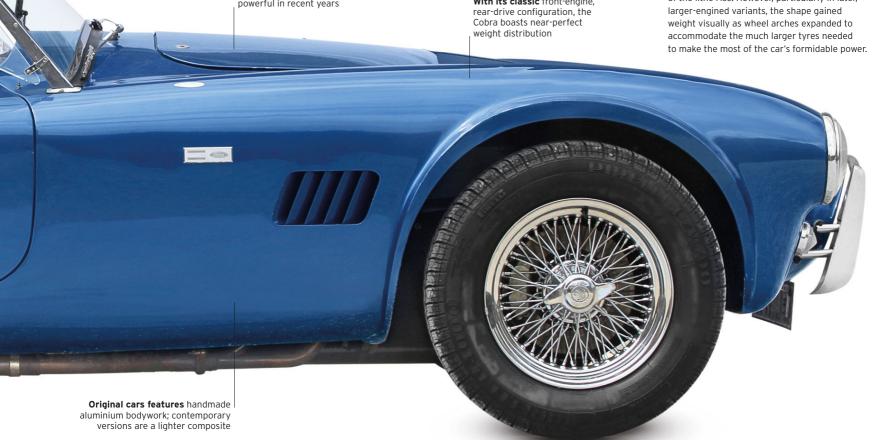

SPECIFICATIONS	
Model	Shelby Cobra, 1962-67
Assembly	Thames Ditton, UK
Production	998
Construction	Aluminium body on a steel frame
Engine	4,267-6,997cc, V8
Power output	260-425 bhp, depending on engine
Transmission	4-speed manual
Suspension	Front and rear coil springs
Brakes	All-round discs
Maximum speed	137-164 mph (220-264 km/h)

With its classic front-engine, rear-drive configuration, the Cobra boasts near-perfect

Styling

The first Cobras shared the elegant simplicity of the lithe Ace. However, particularly in later, larger-engined variants, the shape gained weight visually as wheel arches expanded to accommodate the much larger tyres needed

ON THE ROAD

If you see a Cobra these days it is probably an imitation because no car before or since has captivated the attention of replica and kit car-builders quite as much as the Cobra has. The genuine model was a pleasure to behold. However, its tough stance and strong, muscular shape were as redolent of a big cat as any Jaguar – and in the wrong hands likely to be almost as dangerous.

The sleek and aggressive appearance, lightening-quick performance, responsive handling, and simple, stark cockpit underlined the Cobra's competition heritage, and its status as a driver's car first and foremost. Behind the wheel, the interior featured little in the way of creature comforts, but the view forwards was spectacular – and once the Ford V8 fired up, who needed a radio?

- 1. Simple, circular lights 2. Chrome overriders in place of full bumpers
- 3. Wire wheels with "knock off" spinners 4. Single aerodynamic door mirror
- **5.** Vents to keep brakes cool **6.** Array of dials show the car's performance
- 7. Rev counter vital when racing 8. Stubby manual gear lever 9. AC logo features on steering wheel hub 10. Famous British branding prominent on foot pedals 11. Ford V8 engine the heart of the Cobra

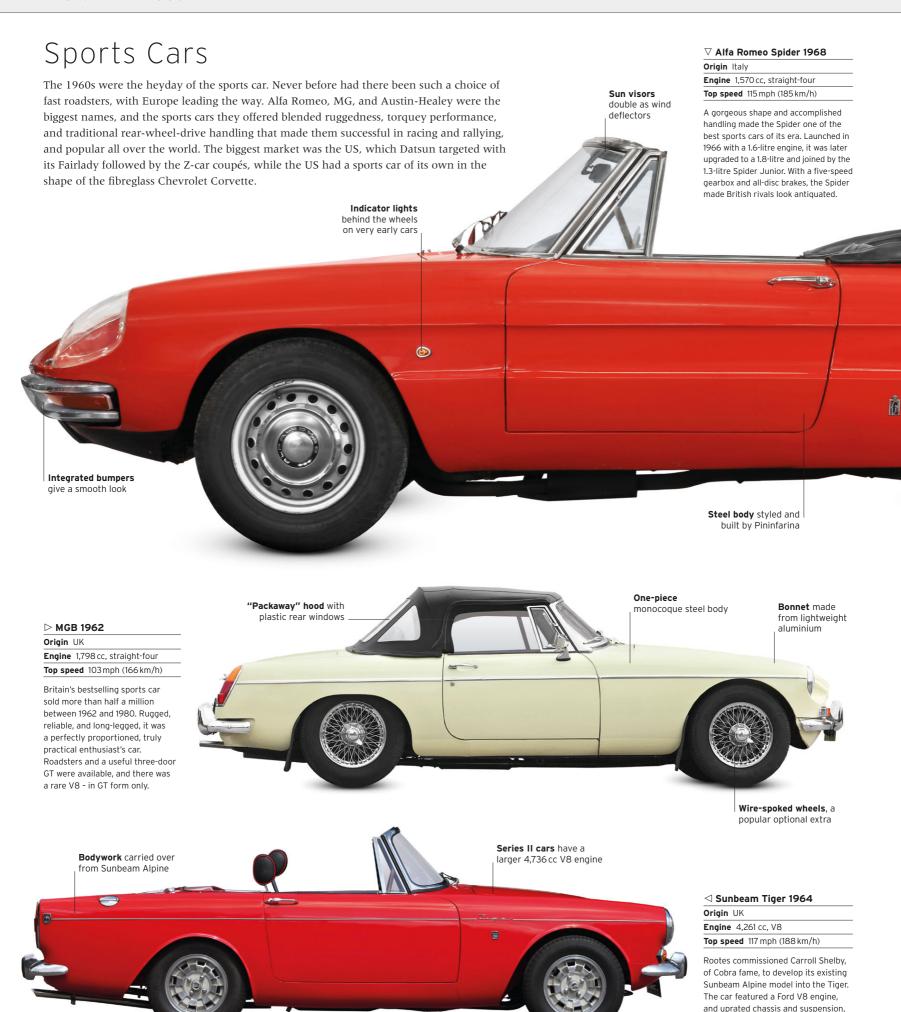

and was often referred to as "the

poor man's Cobra".

Classy interior

The unfussy dashboard featured a painted metal finish, with many functions operated by fingertip. The windscreen wipers were controlled by a button on the floor, operated by foot.

Italian Power

accident damage, as drivers misjudged the length of the car. The slender chrome bumpers gave little protection.

First introduced in 1954, and highly advanced for its time, Alfa Romeo's twin-cam engine was the first such mass-produced, water-cooled, all-aluminium unit available. Adapted and enlarged over time, it continued in service until being replaced in 1997.

Chevrolet Corvette Sting Ray 1965

Origin USA

Engine 5,360 cc, V8

Top speed 147 mph (237 km/h)

A stunning restyle in 1963 turned the Corvette into the Sting Ray. The lightweight, fibreglass body adopted ultramodern lines – a detachable hardtop was an optional extra. The Sting Ray oozed macho potential, which was fulfilled in the ultimate 375 bhp, fuel-injected L84 model. The Sting Ray sold well.

$\mathrel{ riangleleft}$ Datsun Fairlady 1965

Origin Japan

Engine 1,595 cc, straight-four

Top speed 100 mph (161 km/h)

Fairlady 1500 of 1961 was a three-seat sports car based on a Nissan Bluebird platform. A 1.6-litre engine was fitted in 1965, and a 2.0-litre became available from 1967. This MGB-beater from Japan was superbly built and tempted US drivers to consider buying Japanese cars.

Great Marques The Alfa Romeo Story

Italian marque Alfa Romeo is a fully paid-up member of the classic car establishment. For enthusiasts, it stands for relatively affordable sports cars and roadsters with, in the classic period, exceptional mechanical sophistication and driving pleasure. But Alfa's portfolio also includes sports saloons and historic race winners.

THE NAME OF ALFA

ROMEO is an amalgam of the acronym for Anonima Lombarda Fabbrica Automobili (effectively, the Lombardy Car Factory) and the surname of Nicola Romeo. It was Romeo, a businessman who was leading a buyout consortium, who acquired the Milan-based company – originally, in 1906, an

offshoot of the French Darracq concern – in 1915, renaming it in 1920.

Back in 1910 the first Alfa, the 24 HP with a 4,082 cc, straight-four cylinder engine, was the work of chief engineer Giuseppe Merosi. It promptly won the 1911 Targa Florio road race around Sicily, hinting at Alfa Romeo's competition penchant, and Merosi used racing-derived knowledge to develop the double-overhead-camshaft engine design.

The first car, fully titled an Alfa Romeo, was the G1 of 1920, a 6.3-litre straight-six in which great names such as Enzo Ferrari and Giuseppe Campari stormed racing grids. In 1923 the company's new chief engineer Vittorio Jano began work on a new straight-eight engine

that was put into the P2 Grand Prix car. This swept the board in 1925, winning the first Grand Prix World Championship.

Alfa Romeo Giulietta, 1955 Under Italian state ownership after 1945, Alfa Romeo was obliged to make a sensible family car, but the Giulietta still possessed a defiantly sporting character.

In 1938 Alfa Romeo won the Mille Miglia race for the 10th time since 1928.

The other Jano-

designed cars – including the P3, 6C 1750, and 8C 2300 – enabled Alfa Romeo to dominate all the major theatres of motor sport, including Grands Prix and the Le Mans 24-Hours in France. Coach-builders such as Pinin Farina (renamed Pininfarina in 1960) and Touring crafted beautiful bodies on Alfa Romeo chassis such as the 8C 2900B of 1938, in the process creating some of the most desirable road cars of the era.

After World War II, and now under Italian state ownership, the sporting exuberance of Alfa's offerings was toned down, and the firm began to concentrate on the 1900 and Giulia family saloons. However, these cars still had sporting, twin-camshaft engines, and by 1954 the delightful Giulia Spider and Sprint coupé were on sale. The highly aerodynamic Giulia Super saloon of 1962, with its five-speed gearbox, brought its own spin-offs, the beautiful Duetto Spider (Pininfarina) and GT Junior/GTV (Bertone) with engines from 1.3 to 2.0 litres. It was not until 1993 that the last of these scintillating sports cars bowed out.

Advertising the Alfa Romeo Giulietta

"When I see an Alfa Romeo, I lift my hat."

HENRY FORD, TALKING TO ALFA ROMEO PRESIDENT UGO GOBBATO ON HIS VISIT TO THE USA IN 1939

The company began to take things in a completely new direction in 1971 with the advent of the Alfasud. This all-new, front-wheel-drive family car set new benchmarks for handling (only surpassed by the VW

Golf GTI in 1975), and
provided work for a
brand-new factory in
Naples (hence, Alfa Sud, or
Alfa South). At the other
end of the scale was
the 1970 Montreal. a

V8-engined supercar with striking Bertone lines, while the 1972 Alfetta gave rise to a host of derivatives including the Giulietta, Alfa 6, and eventually the 75.

Back on the track, Alfa Romeo had retired from Formula 1 after 1951,

Alfa Romeo Montreal 1970

Originally a show car for Expo 67 in Canada, hence its name, the Montreal offered a V8 racing-derived engine in its Bertone-built body.

but from the 1960s it competed in the World Sportscar Championship, triumphing in 1975 and 1977. Also from the early 1960s tuned Alfa Romeo road cars began to feature in rallying, touring car, and GT series, clinching a mass of victories.

The company struggled to make money, and Fiat stepped in in 1986. Cost savings were made

by sharing components with other Fiat Group cars, but there was a return to sports saloon form in 1998 with the 156. It grabbed the European Car Of The Year award, as did the 147 of 2001. The new Spider and GTV of 1995 were well received, and highlights since then have included the sporty Brera, the compact MiTo, and the new Giulietta in 2010, the marque's centenary year.

In the 1950s, Alfa Romeo assembled the Renault Dauphine for the Italian market, and in the 1980s put its engines into a locally-made Nissan Cherry. Neither venture was lauded by fans of the marque.

This delightful sports car, styled and built by Pinin Farina, was popular in Europe and the USA; the responsive engine was a 1.3-litre twin-cam.

Alfa Romeo Giulietta Spider, 1955

CLASSICS OF THE FUTURE

SZ This limited edition GT was a collaboration between Fiat's styling centre, where the original idea came from, Alfa Romeo, and coach-builder Zagato, the last of which looked after construction of the 1,035 examples that were built between 1989 and 1991. Its codename was ES 30. Unlike earlier special Zagato Alfas, the body was of thermoplastics, rather than hand-beaten aluminium. There was only one colour choice: red with a grey roof and a tan leather interior.

 \triangle Alfa Romeo SZ, 1989

Origin Italy

Engine 2,959cc V6-cylinder
Top speed 152 mph (245 km/h)

The SZ took the wonderful 210 bhp, Alfa Romeo V6 engine from the 75 saloon and put it into this strangely attractive coupé.

4C The entire 2014 allocation of the delectable 4C sold out within a few days. The car's lightweight construction is built around a carbon-fibre chassis tub, aluminium subframes front and back, and tightly wrapped composite body panels; it weighs just 0.88 tons (895 kg). Its mid-mounted power unit endows it with a 0-62 mph (100 km/h) acceleration time of 4.5 seconds, and yet still returned 41 mpg (14.7 km/l). The steering was designed to give racing car-like feedback.

Alfa Romeo stunned

Baby GT Cars

While American muscle cars were trying to prove once and for all that there really was no substitute for cubic inches, in Europe there were mainstream and specialist car-makers which were trying to deliver speed through efficiency and light weight. The cars were fast, fun, and better suited to roads that were narrower and more winding than most of the roads Stateside. Sadly many were cottage-industry projects that fizzled out early, like Gilbern in the UK, although a few succeeded, such as Renault-Alpine, and established enduring reputations.

Styled for purpose

Porsche interiors were functional rather than luxurious. The 356B's simple painted dashboard panel put three essential instruments right in front of the driver, the speedometer, the tachometer, and a combination oil temperature/fuel level gauge. The tachometer was in the centre, a characteristic Porsche carried over to the 911. The pedals were floor-hinged, and the gear lever mounted on the floor.

Volkswagen origins

Flat-four family

The 356B was available with the 1.6-litre 616-series engine in 1600, Super 90, and 1600S models, the 1.6-litre 692-series in the 1600 Carrera GS, and the 2.0-litre 587-series four-cam engine in the Carrera 2 GS. All were flat-four boxer engines.

Engine 598 cc, straight-two
Top speed 76 mph (122 km/h)

Italian styling house Bertone worked wonders to create this winsome, little coupé for the bravely independent NSU, based on its Prinz saloon. A light, but tiny, two-cylinder engine meant it was never all that fast. Even so, more than 20,000 were sold in the 1960s.

Lightweight fibreglass body Engine range includes MG Midget, MGA, and MGB units Chassis made from

Gilbern GT 1959

Origin UK

Engine 1,622 cc, straight-four

Top speed 100 mph (161 km/h)

Wales's only successful car-maker used a tubular steel chassis, attractive fibreglass body, and high-quality interiors to sell this handsome MGA and MGB-powered coupé. The Genie model and the Invader model followed, both with Ford V6 power. Total production of all types amounted to only just over 1,000 cars.

▷ Renault-Alpine A110 Berlinette 1963

Origin France

Engine 1108 cc, straight-four

Top speed 132 mph (212 km/h)

Jean Rédélé was a rally driver and Renault dealer, and built his own cars from 1956 using Renault mechanicals inside lightweight, fibreglass bodies. The A110 used Renault 8 or 16 engines and was fast but hard to handle. It made a great rally car.

Low-drag fibreglass body Wraparound window opens on later models Order to the control of the c

⊲ Saab Sonett 1966

Origin Sweden

Engine 1,498 cc, V4

Top speed 100 mph (161 km/h)

Front-wheel drive, a freewheel, and a column gear-change were unusual features derived from the Sonett's saloon parent. The first 258 built had a peppy, three-cylinder, two-stroke engine, but most contained larger Ford V4 engines. The neat, low-drag body in fibreglass gained concealed headlights on the 1970 Sonett III.

Open-Air Style

Open-top cars were a hit with pleasure-seeking motorists in the 1960s, and there was a wide range to choose from. Even drivers with limited budgets were well catered for, with cheeky beach cars like the Mini Moke, and pint-sized roadsters, such as the Austin-Healey Sprite and MG Midget, and their Italian cousin, the Innocenti Spider. Further up the range there were stylish two- and four-seater dropheads built for touring or for more sporting pursuits. Big or small, slow or fast, they all offered the extra dose of excitement that only fresh-air motoring can deliver.

Sleek and space-saving

Unlike many contemporary cars, the DS did not have a conventional radiator grille. Instead it featured low-set air intakes positioned below the bonnet, giving it a sleek, aerodynamic profile.

Stability and structure

To provide structural rigidity, convertible DS models featured a reinforced frame beneath the body panels. Also, in order to combat understeer, the rear track was narrower than the front.

⊳ Daimler SP250 1959

Origin UK

Engine 2,548 cc, V8

Top speed 120 mph (193 km/h)

The maker of staid luxury saloons had a new aluminium V8, and it was used in a fibreglass-bodied sports car with a chassis copied from Triumph. When Jaguar bought Daimler in 1960, the SP250 was rendered superfluous by the E-type, and production ended in 1964.

$\operatorname{\triangleleft}$ Innocenti Spider 1961

Origin Italy

Engine 948 cc, straight-four

Top speed 86 mph (138 km/h)

Innocenti of Milan commissioned Ghia to style a more upmarket body to go with the running gear of the British Austin-Healey Sprite. New features that the British car lacked included a boot lid, wind-up windows, and a heater. An S version with 1,098 cc engine, front disc brakes, and revised suspension was available from 1963.

Mustang and Chevrolet's own Camaro.

Fast Sports Tourers

When it came to engines, there were two options at the top end of the sports tourer spectrum. One of these was adopted by aristocratic names such as Bentley and Aston Martin, which built their own smooth and powerful six-cylinder and V8 engines to go into cars featuring traditional or Italian-inspired lines. The alternative approach, typified by Jensen, was to drop a big, understressed, American V8 into a stylish body. This delivered effortlessly glamorous motoring without the development costs necessary for a bespoke power unit. Both methods worked, and they produced some of the swiftest and most dazzling cars of the era.

Handcrafted cockpit

As a long-distance tourer, the interior was designed for comfort, with four large, leather, armchair-like seats and plush Wilton carpets. It was, however, a driver's car, with a beautifully crafted dashboard. The veneer-clad centre console featured a wealth of dials and toggle switches, that some commentators compared to the flight deck of a small aircraft.

Four-wheel drive wonder

The Jensen FF was launched with the Interceptor in 1966 and looked similar, though both the chassis and body were different. Underneath it had Ferguson four-wheel drive, and Dunlop Maxaret anti-lock braking, giving it extraordinary road manners for its era.

✓ Mercedes-Benz 300SE 1962

Origin Germany

Engine 2996 cc, straight-six

Top speed 124 mph (200 km/h)

One of Germany's finest cars of the early 1960s, the 300SE had a race-proven, fuel-injected, six-cylinder engine, air suspension, and disc brakes to justify the substantial price jump from the 220SE. The sophisticated coupé or convertible body penned by Paul Bracq was virtually unchanged until 1971.

⊳ Facel Vega Facel II 1962

Origin France

Engine 6,286 cc, V8

Top speed 133 mph (214 km/h)

Big, bold, unquestionably French, and powered by a Chrysler V8, the Facel II was firmly in the Grand Routier tradition. Sadly it was Facel's last gasp - the company shut its doors for good following production of only 180 of these expensive, exclusive cars.

Supercharged V8 engine available on some models Live axle located by trailing links

Studebaker Avanti 1962

Origin USA

Engine 4,736 cc, V8

Top speed 120 mph (193 km/h)

The brainchild of new Studebaker boss Sherwood Egbert, the Avanti had a Raymond Loewy-styled, fibreglass sports car body married to the chassis of the compact Lark. Studebaker struggled to build it and ended production in 1963, but it was revived as the Avanti II with Chevrolet V8 power.

⊳ Gordon-Keeble 1964

unusual for the time

Origin UK

Engine 5,395 cc, V8

Top speed 136 mph (219 km/h)

British engineering, a powerful American V8 engine, and delicately beautiful Italian styling by Bertone went into creating this excellent GT. Parts supply problems hampered production and caused financial woes, eventually sinking the company. Just 100 Gordon-Keebles were built, and happily almost all of them survive.

Great Marques The Maserati Story

The sonorous name of Maserati was, for its first two decades, chiefly associated with pure racing cars. In the 1960s, however, its various GT and luxury saloon models established the marque in the same sphere as Ferrari, Aston Martin, and Porsche.

Nonetheless, plenty of ups and downs have been endured.

FIVE MASERATI BROTHERS were involved with the car company that bore their famous family name, but it was Alfieri, Ettore, and Ernesto together who first opened an engineering workshop in Bologna on 1 December 1914; the other two brothers, Bindo and Carlo, would join them later on.

Within a very short time, Società Anonima Officine Alfieri Maserati had established an excellent reputation, which led to its building 2-litre Grand Prix cars for the Diatto company, and moving to bigger premises in 1919. The year 1926 proved a turning point for Maserati, which unveiled its own car, the Tipo 26. Alfieri Maserati promptly drove it to its first race victory, a class win on the 1926 Targa Florio. Simultaneously, Maserati adopted a trident logo inspired by the statue of Neptune in the fountain at the centre of Bologna.

Maserati was constantly in the public eye, none more so than with the 16-cylinder V4 model that set a speed record over 6 miles (10 km) of 152 mph (245 km/h) in September 1929, driven by Baconin Borzacchini – a feat unsurpassed until 1937.

Poster for 1981 Fangio documentary film

In 1939 and 1940 the
American Wilbur Shaw
drove Maseratis to win
the Indianapolis 500-mile
(804-km) race in the US.
Meanwhile, company
driving force Alfieri
Maserati had died in
1932, and five years later
the company was bought
by industrialist Adolfo
Orsi, and soon after
moved its premises
to Modena.

In 1947 the company launched its A6 series of

single-seater, sport-racing, and road-going sports cars, and in 1953 it entered Formula 1. Juan Manuel Fangio won the Italian Grand Prix that year – the first of 69 Maserati Formula 1 race entries (including nine wins) that gave Fangio two of his five driver World Championships, and brought two constructors' World Championships to Maserati.

However, top-level motor sport almost bankrupted the company. In 1958, with it seeming unlikely the marque could improve on its

on-track achievement, the factory racing department was closed and attention turned to a new road car, the sleek and powerful 3500GT, to capitalize on the mystique of the Maserati name.

A year later Maserati introduced the 5000GT supercar, built in strictly limited numbers for royalty and film stars. In 1963 the company launched not only the compact and stylish Mistral coupé but also the Quattroporte four-door saloon with a 4.7-litre V8 engine. It became, overnight, the world's fastest four-door saloon.

The Ghibli GT of 1966 was, at 170 mph (274 km/h), one of the fastest cars on the planet, and in 1971 Maserati followed the trend for mid-engined two-seaters with the V8 Bora, and the related six-cylinder Merak.

Citroën bought Maserati in 1968, and the Italian company built the 2.7-litre V6 engine for the Citroën SM. However, the partnership fell apart after less than a decade when Citroën hit bankruptcy and, in order to avert Maserati's liquidation, the Italian government and Alejandro de Tomaso stepped in in 1975 to save the day.

Production of the Quattroporte, by now a complex front-wheel drive car, was axed and all effort poured into the

Maserati Bora, 1971

This was Maserati's contribution to the expanding world of mid-engined supercars, with a V8 engine mounted amidships. Its sister model, the Merak, had V6 engines.

Maserati 450S

At the Le Mans 24-Hour race in June 1957, Juan Manuel Fangio pulls down his goggles during practice in the fearsome sportsracer. It was the driver's last appearance at Le Mans.

Biturbo, a sports saloon in the BMW 3 series mould but with a twin-turbo Maserati V6 engine. Intended as a more affordable, semi-mass-produced car, it was launched in 1981.

A huge variety of spin-off models were created from the Biturbo, including the new Ghibli and Shamal. In 1993 Fiat purchased Maserati and in 2004 began to expand Maserati's horizons as a sister marque to Alfa Romeo.

"Cornering power is at least as breathtaking, on first acquaintance, as the performance."

MOTOR SPORT MAGAZINE ON THE MASERATI BORA IN APRIL 1974

The well-received 3200GT of 1998 became the Coupé and Spyder in 2002, and then an all-new Quattroporte luxury saloon joined them in 2003. In 2004 Maserati returned to factory-initiated motor racing with its fierce MC12 endurance GT. Team drivers Andrea Bertolini and Mika Salo delivered its first race win in September. In 2010 Andrea Bertolini and the Maserati MC12 were both declared FIA GT world champions.

The Pininfarina-designed GranTurismo arrived in 2007, followed two years later by the GranCabrio. In 2013 Quattroporte was followed by the Maserati Ghibli mid-size executive saloon.

Maserati Mistral Spider, 1963

This was one of the most desirable Maseratis of the 1960s, especially coveted in this rare open-top form.

Spyder This car is sometimes referred to as the 4200GT type, to differentiate it from the earlier 3200GT model that was offered as a coupé only. The 4200GT Coupé was a four-seater but there were only two seats in the Spyder; both cars sported handsome styling by Italdesign. The engine, indeed the whole drivetrain, was Ferrari-based, and there was a choice between six-speed regular manual transmission or a clutch-less manual with F1-style steering-wheel paddles.

 \triangle Maserati Spyder 2001

Origin Italy

Engine 4,244 cc, V8

Top speed 176 mph (283 km/h)

Based on a shortened coupé floorplan, the Spyder was the Maserati that heralded the marque's return to the US market.

MC12 Built to allow a racing version of the car to compete, the basis for the MC12 was the Ferrari Enzo, with which it shared the mid-mounted V12 engine, and semi-automatic, six-speed gearbox sending power to the rear wheels. It was a big car, and hardly practical, because it lacked a rear window, spare tyre, boot space, and hi-fi, but the visceral thrills were huge. This was a true racing car for the road, even though many who tested it found it remarkably easy and safe to drive fast.

 \triangle Maserati MC12 2004

Prigin Italy

Engine 5.998 cc. V12

Top speed 205 mph (330 km/h)

As well as the 12 racing versions that re-established Maserati as a racetrack force, the company also built 50 road car versions.

Powerful Grand Tourers

The fastest cars of the 1960s were purpose-built road machines rather than the thinly veiled racers that had gone before. Though some of them did eventually hit the tracks in stripped-out, tuned-up form, the real purpose of these cars was to provide rapid motoring and raw thrills for their drivers rather than to win races, and as the decade wore on they became further and further removed from their competition cousins. That was no bad thing: this was an era that produced some of the most spectacular and sought-after fast cars ever made.

∨ Lamborghini Miura 1966

Origin Italy

Engine 3,929 cc, V12

Top speed 175 mph (281 km/h)

Lamborghini invented the supercar with the Miura, launched at the 1966 Geneva Motor Show. Staggeringly beautiful, technically pre-eminent, and unbelievably quick, it was created by a triumvirate of engineering wizards all still in their twenties. Outrageously exotic colours completed a package that perfectly mirrored the mid-1960s.

Origin Italy

Engine 4,719 cc, V8

Top speed 165 mph (266 km/h)

Maserati's magnificent four-cam, V8 engine enabled this luxurious coupé to perform like a supercar. The car's perfectly proportioned fastback body was styled by Giorgetto Giugiaro at Ghia of Italy, and the coupé was joined later by an impossibly stylish convertible.

⊳ Ferrari 275GTB 1965

Origin Italy

Engine 3,286 cc, V12

Top speed 153 mph (246 km/h)

Perfectly proportioned styling by Pininfarina, a five-speed gearbox, and all-independent suspension showed that Ferrari was moving with the times. The six-carburettor versions did 165 mph (266 km/h). The Long-nose Series 2 was available from 1965, and an even faster 275GTB/4 with four-cam engine and many other improvements from 1966.

Italian Powerhouse

To allow for a shorter, more nimble wheelbase, the V12 engine was mounted transversely. The gearbox, final drive, and crankcase were all cast in one piece to also save space.

Steel style

Miura had a steel superstructure and steel doors. The front and rear closing panels were made of aluminium alloy. All the production Miuras were fixed-roof coupés, though Bertone made a single Miura Roadster. A few more cars have since been converted.

Fuel filler hidden under the arille

Engine bay louvres allow hot air out

Wider wings

The Miura SV had wider rear wheels, and the rear wings were extended outwards to suit. The rear lights were also updated, and there was "SV" badging. Under the skin the engine had new carburettors and modified valve timing to liberate an extra 15 bhp, and the last cars had separate gearbox/engine lubrication.

√ Toyota 2000GT 1966

Origin Japan

Engine 1,988 cc, straight-six

Top speed 128 mph (206 km/h)

A pretty coupé with performance and equipment to match its good looks, this model remained rare (only 337 built) because it was made before Toyota was ready to tackle big export markets. It proved however that Japanese designs could now rival the best in the world.

Dino 246 GT 1969

Origin Italy

Engine 2,418 cc, V6

Top speed 148 mph (238 km/h)

Ferrari's Porsche 911 competitor, the Dlno, was beautiful, fast, and handled superbly. The first 206 was a 2.0 litre, but the 246 of 1969 had 2.4 litres and 195 bhp. Dino was a marque in its own right, so these cars never wore Ferrari badges when new.

Executive Saloons

The styling excesses of the 1950s gave way to a more conservative, more tasteful era in the 1960s. The change was most noticeable in premium saloon cars, with crisp and well-honed influences from Italian designers taking over from the brash styles pioneered in America. The vehicles were gradually becoming more technically sophisticated, too. Disc brakes, which had been the preserve of racing cars just a few years earlier, were starting to become a standard feature. Live axles and leaf springs were giving way to independent suspension using coil springs. Under the bonnets, overhead-cam engines were now common.

Old-fashioned appeal

In contrast to the very modern interior of the smaller P6 model, the P5B offered more traditional appointments with a wooden dashboard, leather trim, and chrome highlights. A picnic tray slid out from under the dash, and hid a toolkit inside.

American power

Rover bought the design for this all-alloy V8 engine from Buick when the General Motors company switched to thin-walled, iron-block engines. Rover fitted twin SU carburettors which were much better suited to European driving conditions.

√ Ford Zephyr 6 MkIII 1962

Origin UK

Engine 2,553 cc, straight-six

Top speed 95 mph (153 km/h)

Ford offered four- and six-cylinder engines in its biggest British saloon. This car came with front disc brakes, an all-synchromesh gearbox, and the option of automatic transmission. With big rear fins and lashings of chrome, it was the closest the UK got to an American-style car.

Origin UK

Engine 3,294 cc, straight-six

Top speed 93 mph (150 km/h)

The Cresta was a large, comfortable car from the British branch of General Motors, with more conservative styling than its 1950s' predecessor. Front disc brakes were standard, and from 1965 automatic transmission was available. There was also a conversion to an estate car by coach-builder Martin Walter.

Saloon body less spacious than estate model Independent suspension all round Six-cylinder engine has twin carburettors Nichelotti styling is modern and handsome

Origin UK

Engine 1,998 cc, straight-six

Top speed 93 mph (150 km/h)

A stylish car, well-liked among business executives of the 1960s, the 2000 featured a smooth, six-cylinder engine, all-round independent suspension, front disc brakes, and attractive Italian styling by Giovanni Michelotti. Later models adopted a 2.5-litre engine, initially with Lucas fuel injection.

⊳ Jaguar XJ6 1968

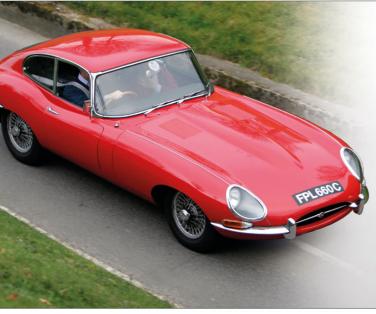

Origin UK

Engine 4,235 cc, straight-six

Top speed 124 mph (200 km/h)

Jaguar gambled by replacing its entire range of cars in 1968 with just one model - the XJ6. Widely hailed as the finest saloon car in the world at its launch, it offered a superb blend of performance, refinement, ride comfort, and roadholding.

Jaguar E-type

With the ground-breaking Mini at the forefront of the 1960s swing, lovers of high-performance cars favoured the Jaguar E-type. Instantly recognizable and enormously desirable, it was never quite as fast as the public imagined. However, with aerodynamic lines clearly derived from the Le Mans-conquering D-type, it was nevertheless frequently voted the most beautiful car ever designed, and with some justification.

SEEKING TO BUILD on the success of such cars as the XK120, C- and D-type, Jaguar founder, Sir William Lyons, charged his racing department with the creation of the first E1A prototype in the late 1950s. Intended purely for technical evaluation (and scrapped before the public had seen it) it was to be 1961 before a version went on sale.

The E-type's windcheating shape, 3.8 litre straight-six, and exceptional value-for-money meant success came quickly. The availability of both coupé and roadster versions served only to magnify sales. Larger engines included a smooth V12, although these later models abandoned the purity of the original design.

Early versions of the E-type, when adornments were kept to a minimum, displayed the cleanest and sleekest shape of any car in production. Enzo Ferrari, on seeing his first, is said to have called it "the most beautiful car ever made".

Powerful straight-sixWith its long bonnet and low-slungengine closely related tobody, the E-type represented theLe Mans-winning Jaguarsschoolboy ideal of what a sports carof the 1950sshould look like

Power-assisted disc brakes

Flat-floor design gives limited leg room

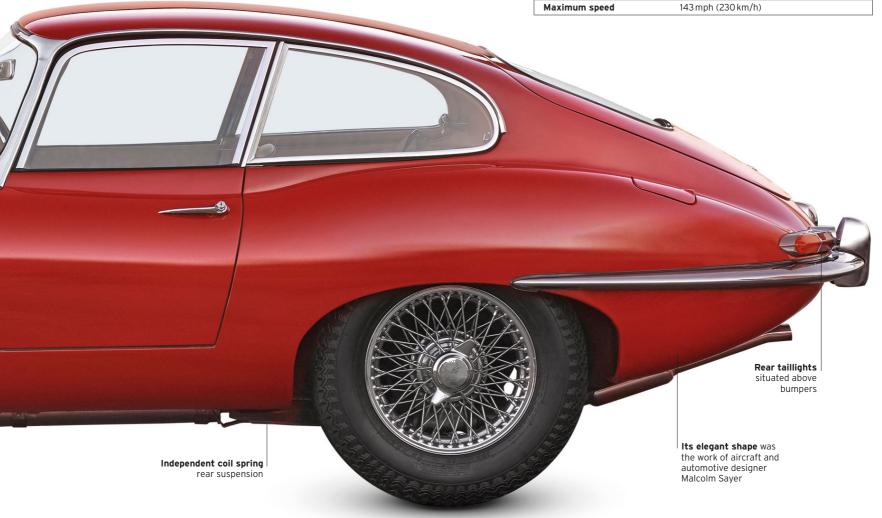

Jaguar badge

Every bit as recognizable as the E-type itself, Jaguar's badge was both stylish and attractive. The additional big cat logo was clearly intended to convey the speed and lithe muscularity of its cars, which for years were sold under the banner "Grace, Pace, and Space".

SPECIFICATIONS	
Model	Jaguar E-type Series I, 1961–64
Assembly	Coventry, UK
Production	15,490
Construction	Steel monocoque
Engine	3,781cc, straight-six
Power output	265 bhp
Transmission	4-speed manual
Suspension	Front torsion bar, rear coil springs
Brakes	All-round discs
Maximum speed	143 mph (230 km/h)

ON THE ROAD

It's easy to see why the Jaguar E-type attracted so much attention. With its long, sleek bonnet and short rear, compact dimensions, and aerodynamic, windcheating shape (not to mention the pleasing rumble of its classic XK straight-six engine) it's hard to believe that when it first went on sale it was just about the cheapest car in its class.

In truth it still is. E-type prices have rocketed in recent years, particularly for the earlier cars, but as classics go it is still possible to enjoy smooth E-type motoring for a fraction of what you might pay for a Ferrari of a similar vintage.

Enthusiasts still argue about which design is the best looking – roadster or coupé, two-seater or the later 2+2 – but one thing is sure, few cars before or since have ever looked this good.

Iconic snarling big-cat badge
 Cowled headlamps on early cars for improved aerodynamics
 Beautifully slim rear lamp cluster
 Unusual triple wipers
 Chrome spinners on wire wheels
 Refined chrome and leather interior
 Slim leather bucket seats
 Simple, clear switch gear
 Elegantly crafted handbrake lever
 Classic 'XK' straight-six engine

Luxury Sports Cars

In the 1960s, if you wanted the epitome of speed and style, these exotic (and expensive) sports cars provided it. The established Italian firms, Ferrari and Maserati, made the cars everyone aspired to, and later in the decade they were joined by a third Italian super-sports manufacturer, Lamborghini. American Corvettes were too brash and British Jaguars just too affordable to be considered alternatives by the super-rich. Bentleys too were staid, but the UK countered with the bespoke sporting coupés from Aston Martin. And if none of those appealed, there was the elegance and surefootedness of Mercedes' latest SL – wealthy buyers had plenty of choice.

Driver safety

The SL evolved with the times, and later models incorporated the latest safety features, including a padded steering wheel hub and a collapsible, energy-absorbing steering column. The SL's interior appeared pared back, with its simple painted dashboard. Standard equipment included vinyl seats and a manual gearbox.

The 280SL was more of a touring car than its predecessors. The smoother, seven-bearing engine had a more flexible power delivery, and the revised suspension gave a quieter and more comfortable ride. "Clap hands" windscreen wipers a quieter and more comfortable ride. "Clap hands" windscreen wipers a quieter and more comfortable ride.

⊳ Ferrari 250 California Spider 1959

Origin Italy
Engine 2,953 cc, V12

Top speed 145 mph (233 km/h)

One of the most beautiful and desirable Ferraris ever made, the California Spider was a car of film stars - famous owners included James Coburn and Alain Delon. The VI2 engine was shared with other Ferrari 250 models and delivered 276 bhp. Disc brakes and radial tyres were other features.

2+2 body design offers small seats in the rear Body is longer and taller than previous DB4

Aluminium panels on Touring Superleggera tubular body frame

Origin UK

Engine 3,995 cc, straight-six

Top speed 148 mph (238 km/h)

Numerous detail improvements turned the 1958 DB4 into the 1963 DB5, most notably an enlarged 4.0-litre engine. A higher roofline and distinctive cowled headlamps were shared with the last DB4s. The car was made famous by its appearances in James Bond films, starting with *Goldfinger* in 1964.

⊳ Maserati Mistral Spider 1963

Origin Italy

Engine 3,692 cc, straight-six

Top speed 145 mph (233 km/h)

Maserati fuel-injected its engine to get Jaguar-level performance, and commissioned Frua to design this understated and sophisticated, two-seat body in coupé and open spyder formats. The next generation of Maseratis used V8 engines, making this the last six-cylinder model from Modena until the V6 Merak of 1972.

✓ Monteverdi 375C 1967

Origin Switzerland

Engine 6,974 cc, V8

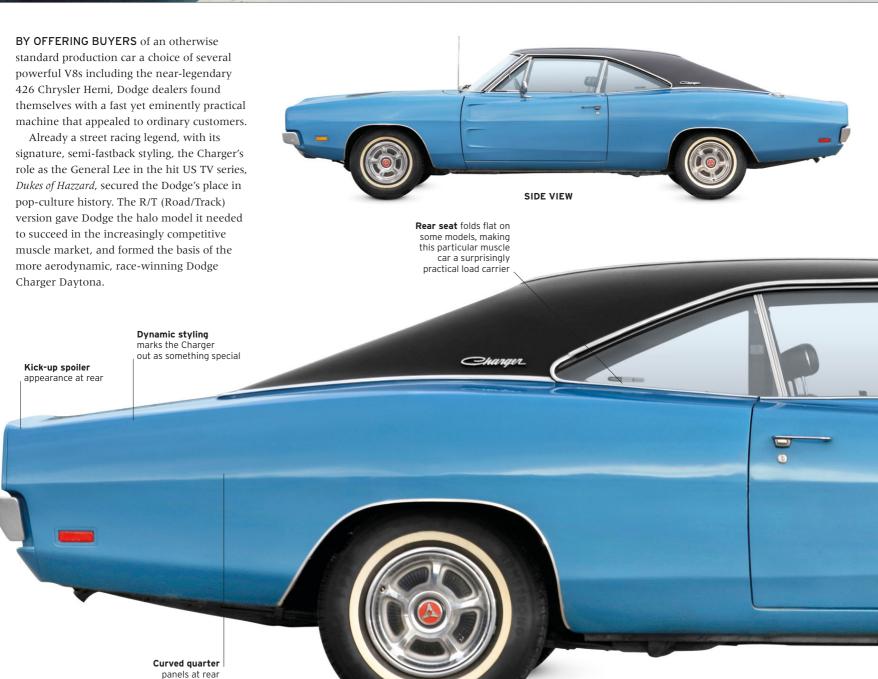

Top speed 150 mph (241 km/h)

Peter Monteverdi was a Swiss prestige car importer who began building cars under his own name in 1967. The 375C was the convertible version, with body by Fissore and Chrysler V8 power. These cars were only ever made in tiny numbers, and production ended in 1977.

Dodge Charger

Although Dodge was already well-established as a manufacturer of cars and trucks, it was its record-breaking achievements on the Bonneville Salt Flats in the 1950s that really got America sitting up and taking notice. Beneath a scorching sun the company smashed no fewer than 196 speed records in a single year, but it was the 1968 launch of the awesome, V8-engined Dodge Charger that really got things moving for the marque.

Charger badge

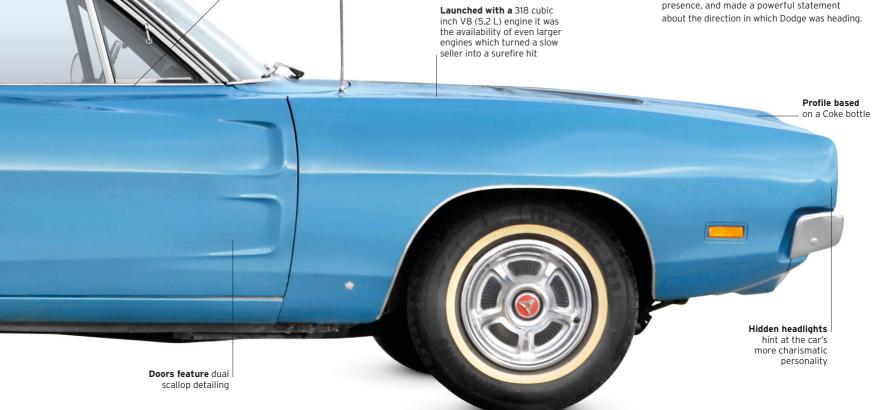

The Charger was from an era when Dodge models tended not to carry a corporate emblem, their identity being individually designed for each model; hence the dramatic typography and meaningless graphic motifs on the Charger.

SPECIFICATIONS	
Model	Dodge Charger, 1967-70
Assembly	USA
Production	96,100
Construction	Steel monocoque
Engine	5,211-7,206 cc, V8
Power output	290-375 hp
Transmission	3- or 4-speed manual, 3-speed automatic
Suspension	Front torsion bars, rear leaf springs
Brakes	Drum with optional front discs
Maximum speed	126-150 mph (203-241 km/h)

Styling

Clean, swept lines, dynamic styling, pillarless window apertures, and a sleek, complex profile gave the semi-fastback Charger a dominating presence, and made a powerful statement about the direction in which Dodge was heading.

ON THE ROAD

With only modest sales outside North America, it is easy to underestimate the significance of Dodge and to ignore the many highlights of its century-long history.

Huge, fast, and with a brutal personality, for lovers of Americana there is little to beat the appeal of the muscle car. None could rival the sophistication and charisma of a European thoroughbred, but the US cars were just as fast (at least in a straight line), and still offered quite extraordinary levels of bang for your buck.

Large and lazy V8s drink fuel but they are durable and relatively easy to maintain. Mammoth sales at the time, and components shared with lesser models, also mean that Charger spares are usually readily obtained from US suppliers.

- 1. Twin headlamp uncovered 2. Retractable plastic headlight covers 3. Styling details on bonnet 4. Sporty hubcaps featuring Dodge logo 5. Opening quarterlights
- 6. Rear roof buttress covered in black vinyl 7. Ornamented chrome fuel filler cap
- 8. Purposeful black and chrome dashboard 9. Auto-shifter is centre-mounted
- 10. Head-restraints are an unusual safety feature for the time

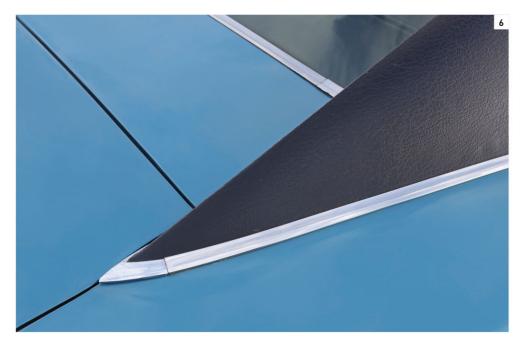

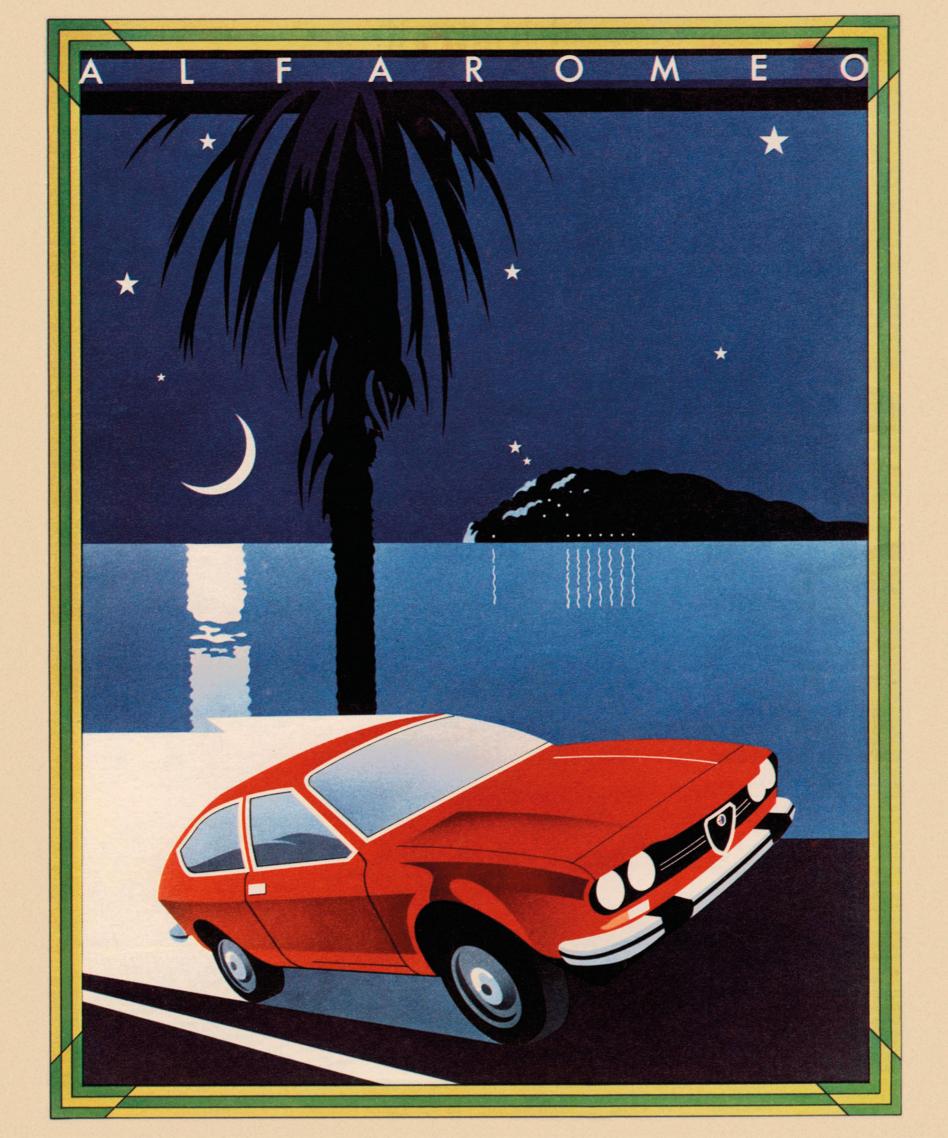

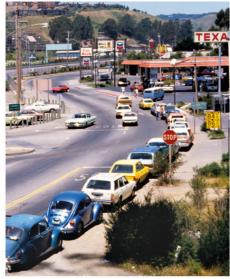

A CLEANER STYLE

 \triangle **Oil shocks**Cars line up at a petrol station in California during the oil shortage of 1974. Petrol prices in the US were much higher than elsewhere in the world.

The 1970s was as turbulent for the car industry as it was for society and the world economy at large. With fuel prices subject to wild fluctuations, manufacturers of fast and powerful cars faced a rocky road. In the US the muscle-car era ended abruptly, while in Italy Maserati struggled, and its rival Iso vanished entirely. The UK's Jensen went out of business, but Rolls-Royce and Jaguar managed to survive.

However, the early 1970s did see some iconic high-performance, wedge-shaped supercars come to life. For example, the mid-engined Lamborghini Countach and Ferrari Berlinetta Boxer both offered excellent handling and aerodynamism.

Japanese companies such as Toyota,

Datsun, Honda, and Mazda produced mass-market cars whose reliability and specifications were revelatory. Europe fought back with design brilliance: the Renault 5 defined the popular supermini breed, while the Volkswagen Golf proved a watershed in versatile family motoring.

Declining air quality in big cities and all over California forced car-makers into a new environmental awareness and impelled engineers to strive for lower emissions and improved fuel economy. Meanwhile, Volvo hit on a totally new selling point: safety. Seatbelts, crumple zones, and padded interiors were a prelude to airbags and antilock brakes.

While the development of alternative fuels - particularly electricity - was a hot topic, a new generation of quieter and more efficient diesel engines proved the most practical innovation. Turbochargers were soon added to these, just as they had been to petrol-engined cars, in an effort to boost performance without the need for massive extra cubic capacity.

"I'd sooner die than **imitate** other people ... That's why we had to **work** so **hard**, because we didn't imitate."

Lancia Stratos HF

The winner of the Rally World Championships in 1974, 1975, and 1976, the Lancia Stratos was developed from a striking, fluorescent orange, wedge-shaped concept car designed by Bertone and launched at the Turin Motor Show in 1971. Swapping that model's four-cylinder Lancia engine for Ferrari's Dino V6 made it one of the decade's most charismatic stars, and – in the right hands, at least – an authentically potent weapon when it came to top-level motor sport.

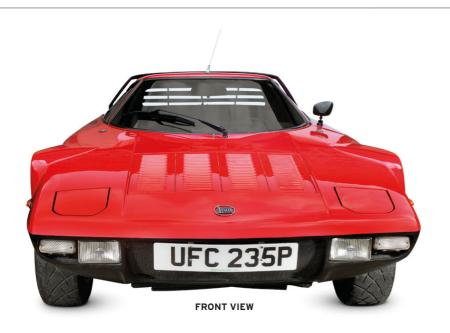

BERTONE'S CONCEPT was the design work of Marcello Gandini who, in a bid to win some business from Lancia, created a machine quite unlike any other.

Very compact, with a low front nose and high tail, the Stratos offered fantastic forward visibility thanks to its unique, deep, crescent-shaped windscreen, but almost nothing to the rear. It was light, as little as 1,984 Ibs (900 kg), and with more than 500 hp in the most extreme version the 2.4-litre Ferrari engine ensured it was devastatingly quick.

In expert hands the Stratos was also an astonishingly capable rally car, winning three consecutive world championships during the 1970s, so it more than earned its place among the all-time international greats.

Aerodynamic spoilers grew to vast proportions on some later competition cars

SIDE VIEW Lightweight, plastic side windows pivot downwards to open Rear louvres reduce visibility Exceptionally short wheelbase is perfect for rapid manoeuvres but makes handling tricky

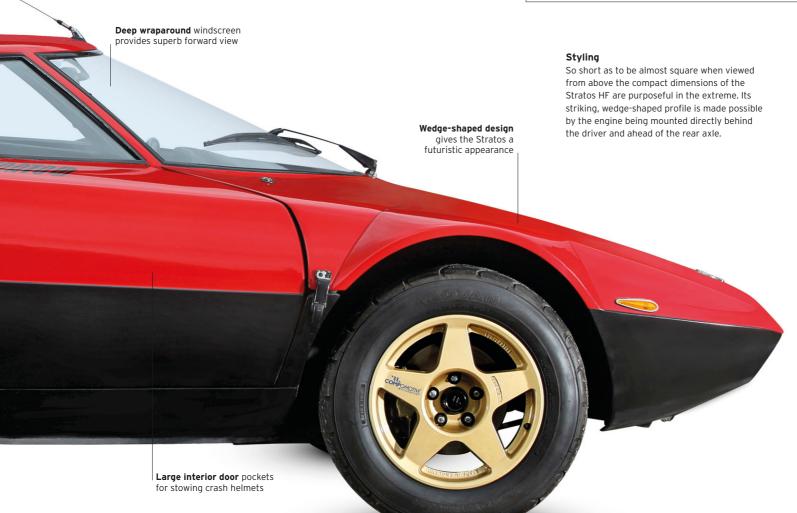

Stratos badge

This wild, almost psychedelic graphic was specially created for the car at Bertone's design studios. It is in stark contract to the traditional Lancia badge on the stubby bonnet, featuring the traditional flag-on-a-lance regalia.

SPECIFICATIONS	
Model	Lancia Stratos HF, 1973-80
Assembly	Turin, Italy
Production	492
Construction	Fibreglass and steel
Engine	2,418 cc, V6
Power output	190 bhp
Transmission	5-speed manual
Suspension	Coil springs front and rear
Brakes	All-round discs
Maximum speed	143 mph (230 km/h)

ON THE ROAD

Offering Corvette levels of performance in something barely larger than the original Honda Civic, the Stratos was an outstanding piece of kit, even without its impressive record in international motorsport. The fact that many of the parts were shared with other companies in Lancia's parent group, Fiat, did nothing whatsoever to dim its immense attraction. The astonishing Bertone profile gave the Stratos immediate kerb appeal, and Lancia the kind of big draw it had been lacking for years. Prices remained high because it was, and is, an exceptional car. It was hot, frantic, noisy, and somewhat uncomfortable, but it was a genuine milestone for the marque, and decades later, it is still remembered as one of rallying's all-round greats.

Great Designers Bertone

Arguably the greatest name in the history of car styling, Nuccio Bertone's company was one of the world's longest-lived design brands. Under Nuccio's guidance the company created pioneering and commercially successful designs for the likes of Alfa Romeo and Lamborghini, applied ideas of genius to concept cars, built a bustling car factory, and discovered and nurtured exceptional talent.

Career highlights

- ▶ 1912 Giovanni Bertone founds a carriagemaking business in Turin
- ▶ 1920 Bertone expands rapidly, opening a car plant in Turin
- ▶ 1933 A 19-year-old Nuccio Bertone joins his father's company
- ▶ 1952 Bertone appears at the Turin Show with two widely admired MG designs
- ▶ 1953 The first of the aerodynamic Alfa Romeo BAT series stuns the design world
- ▶ 1959 New factory opens at Grugliasco on the outskirts of Turin

 \triangle Alfa Romeo Giulietta SZ, 1960 Premiered at 1960's Geneva Salon with lightened bodywork designed by Bertone, the Giulietta SZ was entirely hand-built in aluminium. Its lightweight speed secured it several racing victories.

EX-WHEELWRIGHT GIOVANNI BERTONE was a pioneer of the Italian design movement, founding his *carrozzeria* (auto shop) in Turin as early as 1912. However, the company's heyday only really began in the 1950s, after Giovanni's son, Giuseppe "Nuccio" Bertone, took over the reins. A talented and instinctive man, Nuccio instantly saw that the future of coach-building lay not in rebodying chassis but in adapting bodywork to fit the new "monocoque" platforms manufacturers were adopting. He was also one of the first design managers to realize the impact made by pure "dream car" shapes.

Bursting triumphantly into the post-war era, Nuccio's most striking creation was built for Alfa Romeo in 1953: the Berlina Aerodinamica Tecnica, or BAT. Designed to be as aerodynamically efficient as possible, its bold, swooping shape was reputed to have a drag coefficient of just 0.19 – one of the lowest figures of all time. Nuccio later magnified the bat-like form in two further, even more striking BAT designs in 1954 and 1955.

THE CAR-MAKERS' DARLING

It was another Alfa Romeo – the Giulietta Sprint, launched at the 1954 Turin Motor Show – that really cemented the Bertone name for design brilliance. This elegantly simple coupé won Bertone such a reputation that it became the first port of call for a raft of car manufacturers.

In the early 1960s Bertone created such iconic shapes as the BMW 3200 CS, Iso Grifo, and Fiat Dino, but one car stands out above all: the Lamborghini Miura. The effect the Miura had on car design when launched in 1966 cannot be underestimated: its elegant proportions, striking details, and pioneering mid-engined layout all won instant acclaim.

Nuccio had a knack for hiring brilliant young talent: such great names as Giorgetto Giugiaro, Marcello Gandini, Giovanni Michelotti, and Franco

Scaglione all served their apprenticeships at Bertone.

The company was also bold in its pursuit of manufacturing contracts, building cars for Alfa Romeo, Fiat, Volvo, and Opel among others. By

cars a year. Bertone also became a commercial brand in its own right, badging models under its name, including the X1/9, Ritmo Cabriolet and Freeclimber off-roader.

1968 it was assembling 30,000

WICKED CHILDREN

Above and beyond
everything else, however,
Nuccio always kept a special
place in his heart for his pure
show cars, which he dubbed
his "children", particularly the

ones he called his "wicked children" – his controversial dream cars that pushed at the boundaries of the possible.

The late 1960s were inaugurated by 1967's Lamborghini Marzal, a four-seater supercar with enormous, glass-filled gullwing doors, giving full view of the silver leather clad cabin.

No less dramatic was the 1968 arrow-shaped Alfa Romeo Carabo.

The fluorescent red nose hinted at red-shift, "light-speed" velocities, while the upward-hinging "scissor" doors anticipated Bertone's seminal

Bertone's 1970 Lancia Stratos
Zero is perhaps the closest that
car design has ever come to pure
sculpture. Extreme in every way,
it was wedge-shaped and ultra-low,
with the passengers entering the car
via a hinged windscreen and walking in

beds, and the mid-mounted engine lid

Lamborghini Countach by

four years.

opened up like a grand piano. The Stratos name would later be revived for Lancia's road and rally car in 1973 – another iconic Bertone shape.

GEOMETRIC APPROACH

More strikingly original concepts followed: the 1974 Lamborghini Bravo with a wraparound windscreen that seemed to be formed of a single pane; the 1978 Lancia Sibilo whose plastic windows morphed into the bodywork, apparently in a single sheet; and the Ferrari Rainbow of 1976, composed almost entirely of angular lines. This geometric approach characterized a generation of Bertone designs. Unlike almost every other studio, Bertone took pride that its show cars were always fully running vehicles. Even after retirement, Nuccio would check on his designers at weekends, and leave gentle handwritten suggestions on their work. Nuccio Bertone died in 1997. By then, his company was a colossus employing 1,500 staff. Sadly its fortunes waned and it collapsed into bankruptcy in 2014.

The personal touch

Nuccio Bertone inspects his 1968 concept car for Alfa Romeo, the Carabo. Its dramatic wedge shape would continue to influence car designs until well into the 1970s.

Go-Anywhere Ability

The utilitarian off-road vehicles designed during World War II matured into pick-ups, estates, and SUVs that offered comfort and convenience features such as power steering, coil-spring suspension, and automatic transmission, but still retained that essential go-anywhere capability. They made excellent towing vehicles, too, and with soft springs and good visibility thanks to their lofty driving positions they won fans – even among drivers who never left the asphalt. Higher standards of trim and additional labour-saving devices such as electric windows and electric mirrors became more common as SUVs increasingly appealed to luxury buyers.

Broader bonnet

The Range Rover's "clamshell" bonnet, which took the wing-tops with it when opened, had raised corners at the front to help position the car in low-speed manoeuvres.

Easy access

A two-part tailgate, split in the middle, was a key feature; the upper glazed window opened upwards, the lower part dropped downwards. A top-mounted wiper was an unusual - and invaluable - fitment.

Flat glass reduced build cost ⊳ Ford Bronco 1970 Origin USA Engine 2,781cc, straight-six Top speed $76 \, \text{mph} (122 \, \text{km/h})$ Conceived by the same team who gave Ford the Mustang, the Bronco was a brave early take on the SUV concept but was too small to capture the US market. Top speed 98 mph (158 km/h)

The Blazer was a shortened version of Chevrolet's pick-up truck, with a full cab added. It was offered in two- or four-wheel-drive models with six- or eight-cylinder engines to compete against the Jeep, Ford Bronco, and International Harvester Scout. GMC sold the same vehicle as the Jimmy.

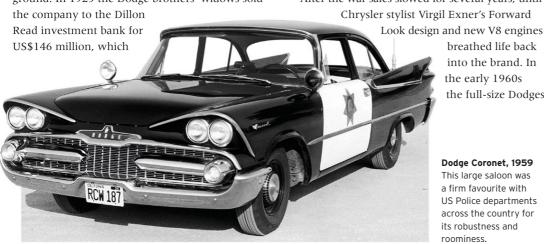

Great Marques The Dodge Story

From respected component manufacturer to car-maker, to core brand of the Fiat-Chrysler Automobiles, Dodge has become a fixture in US motoring history that survives and thrives today. Merged into Chrysler as a mid-priced brand, it blossomed in the '60s' muscle car boom, and was the pioneer of the '80's minivan.

BROTHERS HORACE AND JOHN Dodge founded a precision engineering company in 1901 which quickly won a reputation for quality, and counted the Olds Motor Vehicle Company and the newly established Ford Motor Company among its customers. The brothers became Ford shareholders too, owning 10 per cent of Henry Ford's expanding empire until a disagreement over the running of the company ended up in court. Despite his company's success, Ford denied shareholders a dividend, ostensibly to re-invest in new production facilities but also in part to avoid financing Dodge's development of a car to rival his Model T. The matter was resolved in the brothers' favour after a second, more famous lawsuit in 1919.

Ford's fears of a Dodge rivalry were proved well-founded when the Dodge brothers released their first car in 1914. The steel-bodied Model 30 offered a higher-quality and more exclusive alternative to Ford's ubiquitous Model T. Offering 35 bhp, a 12-volt electrical system, and slidinggear transmission, the Model 30 propelled the Dodge Brothers Company to second in the sales charts behind Ford. The early success was checked however, after both Horace and John Dodge died suddenly within a few months of each other in 1920, and thereafter the company gradually lost ground. In 1925 the Dodge brothers' widows sold

Dodge Polara convertible, 1963

The relatively restrained lines of this mid-size model still concealed plenty of Detroit horses, with a choice of powerful V8 engines.

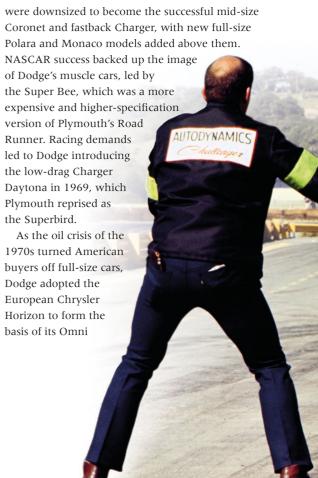

reorganized it and sold it on to the Chrysler Corporation in 1928. This placed Dodge's cars between the bargain-basement Plymouths and DeSotos, and the higher-spec Chryslers in the corporation's line-up. By that time, Dodge had become a leading manufacturer of light trucks, and the advent of World War II saw the company build more than a quarter of a million military trucks and WC54 ambulances in both 4×4 and 6x6 versions.

After the war sales slowed for several years, until Chrysler stylist Virgil Exner's Forward

> breathed life back into the brand. In the early 1960s the full-size Dodges

Dodge Coronet, 1959 This large saloon was a firm favourite with

US Police departments across the country for its robustness and roominess.

"Travel behind it on an English country lane, and you get the impression of an error of scale. It's as if an elephant had sat on a Cobra."

PERFORMANCE CAR MAGAZINE ON THE DODGE VIPER, NOVEMBER 1993

hatchback, and re-badged Japanese Mitsubishis as the compact Colt and Challenger. Meanwhile, the cash-starved Chrysler Corporation struggled to find the resources to renew its American range, and it took the arrival of a new Chrysler chairman – Lee Iacocca – and several federal loan guarantees to rejuvenate the ailing group.

The new era began with the Aries, Dodge's version of the corporate front-wheel-drive K-car, and the Caravan, which beat the Renault Espace to market by a few weeks, establishing a whole new minivan market sector. In the 1990s Dodge introduced the exciting V10-engined Viper, a new Dodge Ram pick-up, and modern "cab forward" styling on its Intrepid, Stratus, and Neon saloons.

Unlike its stablemate Plymouth, Dodge survived the merger of Chrysler and Daimler-Benz in 1998,

and benefited from a new rear-wheel-drive platform which led to stylish new Charger and Challenger models. In 2007, Daimler sold Chrysler to the American private-equity Blackstone Group for \$7.4 billion, leaving it as an independent company, but the financial crisis of 2009 saw Chrysler file for Chapter 11 bankruptcy protection and receive a bailout from the US government. The loan was repaid ahead of time and Chrysler was absorbed by Fiat. Bold, supercharged Hellcat models announced that Dodge's future in the new Fiat-Chrysler Automobiles would be as a performance brand.

Dodge Challenger, 1970

A fixture of US car racing Dodge's muscle car heavyweight was also the four-wheeled star of the hit car chase movie *Vanishing Point*.

Viper RT/10 Chrysler boss Bob Lutz wanted a modern version of the Shelby Cobra, and he got it in 1989. The hugely positive reaction to the Viper concept car convinced Dodge to put it into production, using a steel tube chassis and composite body panels. To ensure performance, Dodge added a new V10 engine with an alloy block designed by Lamborghini. The Viper was fast and frantic. GTS race cars engineered by Reynard and built by Oreca were successful in GT racing.

△ **Dodge Viper RT/10 1992** A '90s' take on the Shelby

Origin USA

Engine 7,990 cc, V10

Top speed 180 mph (290 km/h)

A '90s' take on the Shelby Cobra, Dodge's roadster packed 400 bhp from a vast V10 engine, designed with input from Lamborghini.

Challenger SRT Helicat Dodge unveiled its 21st-century Challenger in 2007 - a stylish two-door notchback that harked back to the first-generation Challenger, made famous by the film Vanishing Point in 1971. The Hellcat specification added a 6.2-litre HEMI V8 with a twin-screw IHI supercharger, driving the rear wheels through a ZF 8-speed automatic transmission. Output was no less than 707 bhp, making it the most powerful muscle car ever.

△ Dodge Challenger SRT Helicat 2015

Origin USA

Top speed 199 mph (320 km/h)

This was a supercharged version of the Challenger SRT8, with a blistering 707 bhp. Its retro-styling evoked the glory days of American muscle cars.

the 1971 film Vanishing Point

Muscle Cars

American motoring muscle reached its zenith at the start of the 1970s. V8 engines were bigger than ever before, and delivered unprecedented power. The fastest and rarest muscle cars were the specials built for NASCAR racing, such as the aerodynamic Dodge Charger Daytona and Plymouth Road Runner Superbird, but most muscle cars were built for on-street show rather than race-track go. The era of the muscle was soon over, however, thanks to emissions concerns and rising insurance costs. Then came the impact of the oil crisis in 1973. Performance cars would be back, but they would never be quite the same again.

Peak power

"Factory blue-printed to save you money", screamed the ads. The monster 455 cu in V8 was stock for 4-4-2s in 1971, but that was its swan song year. Power output would soon dwindle as emissions controls kicked in and the use of unleaded petrol demanded lower compression ratios.

\triangledown Oldsmobile 4-4-2 1970

Origin USA

Engine 7,456 cc, V8

Top speed 120 mph (193 km/h)

The 4-4-2 was launched in 1964; the figures signified a four-barrel carburettor, four-speed gearbox, and dual exhaust pipes. This was a standalone model from 1968-72, though its vast 455 cu in engine became standard in 1970. The same year a 4-4-2 was used as pace car at the Indy 500.

Contrasting roof colour was an optional extra Round parking lights in front bumper

Optional extras

This was already an impressive machine, but new owners could still specify even more extras to enhance the car's performance. Options included upgrades to the gearbox, rear axle, brakes, and steering. A weightsaving fibreglass bonnet was also available.

Hidden power

In marked contrast to the aggressively styled front end, the elegantly sloping rear was more subtle. Only the 4-4-2 badge and twin exhausts gave away the fact that this was a muscle car.

Dual exhausts are part of the 4-4-2's identity

Chevrolet Nova SS 1971

Origin USA

Engine 5,736 cc, V8

Top speed 107 mph (172 km/h)

At first this model was offered only as a signature performance package, but fitting V8 engines into the car from 1968 made the Nova SS (Super Sport) the fastest of the compacts. Capable of reaching 0-60 mph (96 km/h) in under 6 seconds, its abundant wheelspin and heavy steering only boosted the car's macho appeal.

▷ Pontiac Firebird Trans Am 1973

Origin USA

Engine 7,459 cc, V8

Top speed 132 mph (212 km/h)

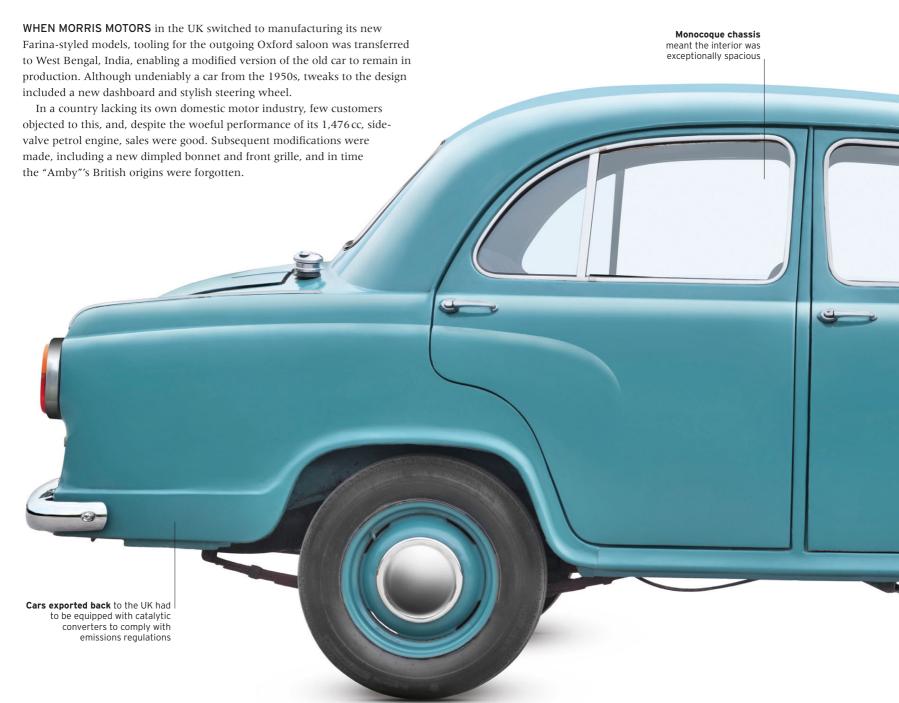

This model was often distinguished by a huge decal on its bonnet depicting a phoenix. The Trans Am was named after the racing series in which the first-generation Firebirds excelled in the late 1960s, even though the Trans Am's engines were too powerful for it to compete in the series itself.

Hindustan Ambassador

With production ceasing in the UK in the late 1950s, the Morris Oxford Series III was reborn almost immediately in India. Renamed the Hindustan Ambassador, it was the first car to be built on the subcontinent (rather than merely assembled), and retained its dominant position as the "King of Indian roads" until the 1980s. The "Amby" remained on sale until May 2014.

AMBASSADOR

Ambassador badge

Named after the region where its car plant was based, the Hindustan Ambassador was conceived by six engineers at Hindustan Motors in West Bengal, and soon became the car of choice for well-heeled Indians. With a name that suggested class, it was considered the definitive Indian car.

External bonnet hinges

SPECIFICATIONS	
Model	Hindustan Ambassador, 1958-2014
Assembly	Uttarpara, India
Production	Over 4 million
Construction	Steel monocoque
Engine	1,476-1,817cc, straight-four
Power output	40-75 bhp
Transmission	4- or 5-speed manual
Suspension	Front torsion bars, rear leaf springs
Brakes	All round drums
Maximum speed	69-90 mph (111-145 km/h)

Styling

Despite numerous small, cosmetic changes, the basic shape of the car was largely unchanged. Its simple, traditional looks were characteristic of the 1950s, and its spacious and comfortable interior meant it became one of India's best-loved cars.

Deep headlamp cowls

Bolted chrome bumpers illustrate the age of the original design, but were a highly practical feature

ON THE ROAD

Certainly better loved than the Morris Oxford original ever was, the Ambassador was such a curiosity outside of India that this only enhanced its appeal to would-be buyers. By contemporary standards the car was almost comically old-fashioned, and there was no doubt that in practical terms later models made better cars. But many of the modifications appeared to be no more than cheap compromises, and it was the earlier Ambassadors that looked the most stylish. Owners made allowances for the combination of poor performance and lack of comfort. Perhaps it was enough that this was the first car to be made on the subcontinent, and became a much-revered national icon.

Prominent chrome radiator grille replaced on later models
 Bonnet mascot – a 1950s Morris touch
 Optional sun-visor – more use in Delhi than the UK
 Prominent filler cap
 Opening front quarterlights
 Minimal rear lights
 Ambassador name proudly displayed on boot lid
 Simple but practical door-pull, typical of the design
 Bench seats front and rear
 Well-worn steering wheel sporting the Hindustan logo
 Sparse instrumentation for driver

Supercars

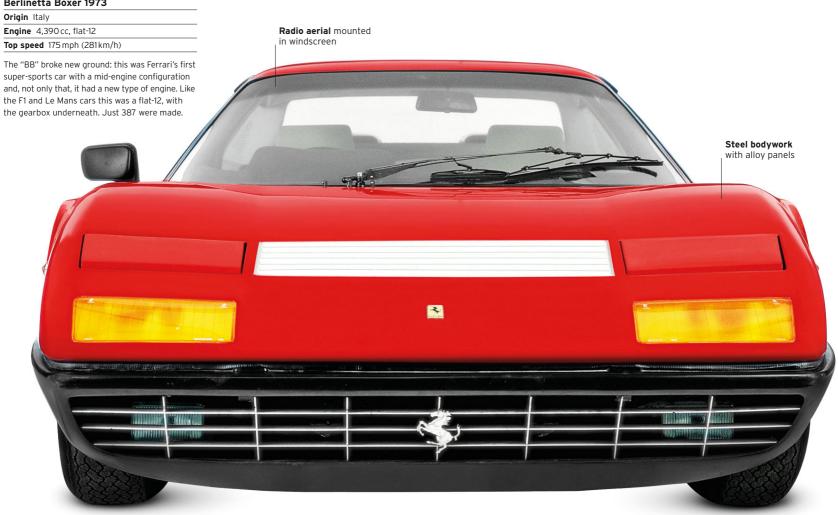

In the 1970s ever larger and more powerful engines provided greater top speeds, while slashing acceleration times. Ferrari was the last of the big three Italian supercar-makers to switch to mid-engined designs: while Lamborghini built the Miura and prepared the Countach, and Maserati offered the Bora and Merak, Ferrari built the Daytona, the last of its traditional front-engine, reardrive GTs. But that was followed by the flat-12 Berlinetta Boxer, which joined Lamborghini, Maserati, and others in an era of glamour and drama.

Radical engine

So-named due to the punching action of its horizontal pistons, the "Boxer" engine was positioned behind the cockpit. The alloy cylinder heads held two camshafts each, and used composite belts instead of timing chains.

⊳ Ferrari 365 GT4 Berlinetta Boxer 1973

⊳ Ferrari 365GTB/4 1968 "Daytona"

Origin Italy

Engine 4,390 cc, V12

Top speed 174 mph (280 km/h)

Classically sculpted and outrageously quick, the Daytona was a supercar with a split personality: recalcitrant when dawdling, sublime at speed. It was the last of the great frontengined V12 war horses, for a while, at least. "Daytona" was only ever a 1970s nickname, not an official title.

□ Porsche 911 Carrera RS 1973

Origin Germany

Engine 2,687 cc, flat-six

Top speed 149 mph (240 km/h)

Porsche pulled out all the stops to turn the 911 touring car into a road-going racer. Minimal equipment, lightweight trim, and even thinner glass reduced the weight, and the engine was enlarged to 2.7 litres and 210 bhp. Buying a Porsche 911 today is a blue-chip investment.

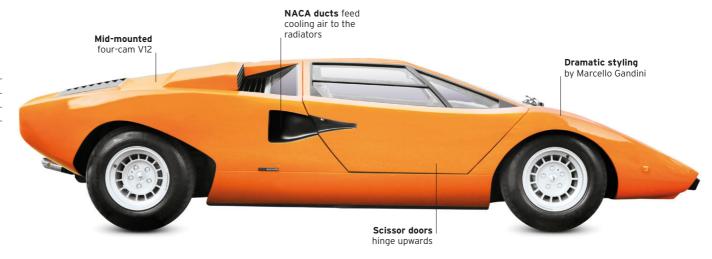

⊳ Lamborghini Countach 1974

Origin Italy

Engine 3,929-5,167 cc, V12

Top speed 183 mph (294 km/h)

Project 112 was Lamborghini's first mid-engined road car. It had a tubular chassis and a development of the Miura's V12 powerplant - this time mounted longitudinally, with the five-speed gearbox in front and a driveshaft running back through the oil sump to the final drive. This was dramatic, even by Lambo standards.

$\operatorname{\triangleleft}$ BMW M1 1979

Origin Germany

Engine 3,453 cc, straight-six

Top speed 162 mph (259 km/h)

BMW turned a race-car project into a road-going supercar, with a lusty, mid-mounted six in a sharp suit by Giorgetto Giugiaro (see pp. 264-65), around a Lamborghini-designed chassis. Just 453 were made in four years, with 20 of them built for racing in the short-lived Procar series.

Great Designers Colin Chapman

One of the great visionaries of the car world, Colin Chapman was a born competitor. To fund his passion for building race-winning cars, he created a string of dazzlingly brilliant Lotus sports cars for road drivers. Chapman was a magician when it came to weight reduction and a master in the art of sharp handling, all of which he employed in his championship-winning constructions.

Career highlights

- ▶ 1948 Colin Chapman joins the RAF and briefly becomes a pilot before returning to civilian life
- ▶ 1952 Chapman founds Lotus Engineering, based behind his father's pub in north London, to make sports cars
- ▶ 1957 The iconic Elite is the world's first-ever fibreglass monocoque, and the stripped-down Lotus Seven is produced
- ▶ 1962 The new Elan defines sports-car qualities for the modern era
- ▶ 1963 Jim Clark wins Lotus's first F1 title in the monocoque F1 car, the Type 25

 \triangle Lotus Elan, 1967

The fast, elegant, and lightweight Elan epitomized Chapman's philosophy of lowering weight. With four-wheel independent suspension and rack-pinion steering, the car was also technically advanced.

- ▶ 1968 Graham Hill takes the F1 crown for Lotus in the 49 - the first car to use its engine as a stressed chassis member
- ▶ 1976 Mid-engined Esprit marks a high point in handling finesse and endures for almost 30 years in production
- ▶ 1978 The Lotus 79, designed by Chapman, pioneers the use of "ground effect" aerodynamics in F1
- ▶ 1982 Chapman dies of a heart attack, aged just 54

COLIN CHAPMAN NEVER CEASED in his

single-minded drive to innovate and improve. This determination, combined with a genuine genius, made him a brilliantly intuitive engineer with a passion for racing and an unmatched ability to design championship-winning Grand Prix racing cars.

It all began very humbly in 1947. As an engineering student and part-time car dealer, Anthony Colin Bruce Chapman had been captivated by a trials racing event. Inspired, he turned an old unsold Austin Seven into a trials special, which he registered as a "Lotus". Very soon he switched to racing on tarmac and was so successful in his self-built cars that other racers pleaded with him to build replicas. The experience persuaded him to form Lotus Engineering in 1952.

The same year Chapman designed his Mk VI, the first Lotus to have its own chassis. His ideology was to make everything as light as possible, and, by combining a lightweight chassis with the latest technological advances in suspension, he successflly distilled the essence of what makes a sports car. 1957's Lotus Seven was perhaps the ultimate expression of this lightness-above-all approach, and the same essential design remains on sale today as the Caterham Seven.

Meanwhile, Chapman became more serious about racing cars. His Mk VIII of 1954 and Mk IX of 1955 were formidable competition machines. Acceptance into the Society of Motor Manufacturers and Traders meant Lotus could now race – and

Lotus Esprit, 1976

The Giugiaro-designed Espirit gained worldwide fame, starring in the James Bond film *The Spy Who Loved Me*. Unlike in the movie, the standard roadgoing Espirit was incapable of converting into a submarine.

win – at prestigious events such as Le Mans, competing first with the Lotus Eleven of 1956. Chapman's compulsion to eliminate unnecessary weight led him to take a revolutionary approach with 1957's Elite, which did away with a chassis completely. It was the first car in the world to have a fibreglass monocoque body/chassis supporting the mechanicals. This design ultimately proved impractical for road cars, so Chapman innovated again on his 1962 Elan. With its simple backbone chassis and jewel-like, twin-cam engine, it could run rings all around its contemporaries on the road. A seminal car in every way, it was also both profitable and popular, selling more than 11,000 examples.

Such success was partly built on Lotus's Grand Prix wins. The company's first-ever Formula 1 victory came in 1960 with Stirling Moss at the wheel, followed by F1 titles in 1963 and 1965 for Jim Clark, and in 1968 for Graham Hill.

"A brilliant designer, but his **intense desire to win** would sometimes cause
him to come too **close to the edge.**"

SIR STIRLING MOSS

As racing cars made the switch from front to mid-mounted engines, so Chapman sought to do the same for road cars. The Europa – launched in 1966 as Lotus moved headquarters to Norfolk was one of the world's first mid-engined road cars and it set new standards in terms of handling.

Lotus was fast outgrowing the days of selling cars for home assembly in kit form. Its design ethos was evolving, too, since Colin Chapman only ever built cars that he wanted to drive,

move towards a new era of mature sophistication and aspiration - It was becoming the British equivalent of Porsche.

TRIUMPH AND TRAGEDY

Then came the Esprit, a superb mid-engined sports car styled by Giorgetto Giugiaro, and once again one of the sharpest-handling cars of its generation. Indeed, the Esprit was a marvel in both concept and execution, ensuring that it would remain in production

Disaster struck in 1982 when Chapman suffered a fatal heart attack. In the wake of his death, Lotus sought external investment and did consultancy work. General Motors bought Lotus in 1986, beginning a period of rising and falling fortune as the company was sold to Bugatti, then on to the Malaysian firm Proton.

However, Chapman's legacy of innovation never left Lotus. The 1996 Elise returned Lotus to its roots. Here was a car whose light weight, would truly have made Colin Chapman

The Superminis

Small cars made great strides in the 1970s. Hatchback bodies were used almost universally, making little cars more useful and adaptable than they had ever been before. Many manufacturers adopted front-wheel drive, which brought with it improvements in space utilization, allowing for more passenger and luggage space within compact overall dimensions. Front-drive also delivered safe, stable handling that was ideal for mainstream motoring. However, some held out against the trend – generally because they were reusing rear-drive platforms left over from previousgeneration models that were at least well-suited to pocket-sized performance cars.

▽ Fiat 127 1971

Origin Italy

Engine 903 cc, straight-four

Top speed 83 mph (134 km/h)

Fiat had always been brilliant at wellpackaged, quick, small cars and the 127 proved another such success, with sales of 3.7 million. Early cars were booted but a hatchback body soon followed. The 1300 Sport option had a 1,300 cc engine and could reach 95 mph (153 km/h).

Circular cabin

⊳ Renault 5 1972

Origin France

Engine 956 cc, straight-four

Top speed 86 mph (138 km/h)

The class-defining and perhaps most popular supermini, the Renault 5 offered a clean and modern three-door body, reasonable prices, six engine choices ranging from 782 to 1,397 cc, and all-independent suspension. The hot Alpine/Gordini model and even hotter mid-engined Turbo added speed and glamour to the range.

bar springs

□ Peugeot 104 1972

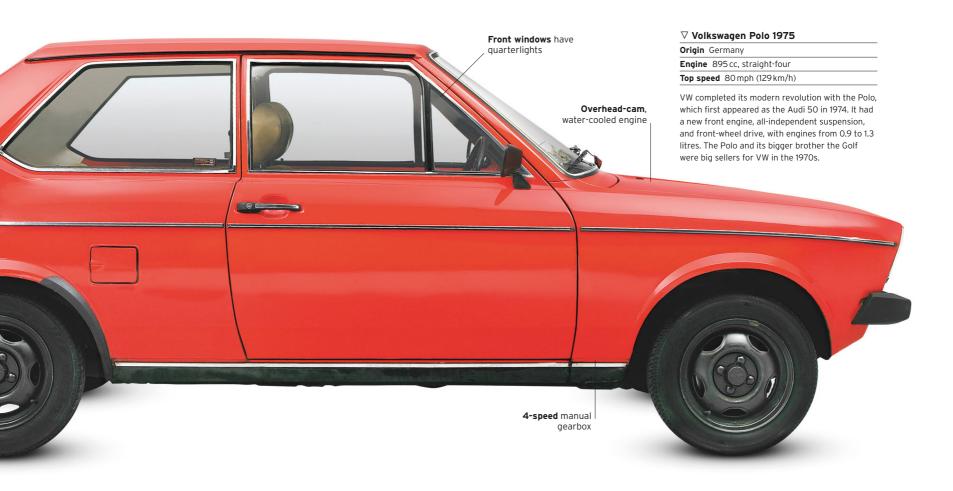

polyurethane bumpers

Origin France

Engine 954 cc, straight-four

Top speed 84 mph (135 km/h)

Peugeot's first supermini was launched as a fastback four-door, then a hatchback five-door. A shorter three-door 104 Coupé followed later. The all-new engine and independent suspension added to its appeal. Pininfarina designed a "Peugette" roadster based on the 104, but it never reached production.

⊳ Ford MkI Fiesta 1976

Origin Spain

Engine 957 cc, straight-four

Top speed 79 mph (127 km/h)

Ford's first supermini for Europe was basic, with only four gears, but it had engines up to 1,600 cc and was priced competitively. Sales reached 1.75 million by the end of production in 1983. Fiestas were built in Spain, the UK, and at two German factories. This is the XR2 model.

√ Vauxhall Chevette HS 1978

Origin UK

Engine 2,279 cc, straight-four

Top speed 115 mph (185 km/h)

Most Chevettes were pedestrian 1.3-litre hatchbacks and saloons but Vauxhall made a virtue of the old-fashioned, rear-drive layout by creating a high-performance version with a bigger, 16-valve engine. The 2300HS quickly became a serious competitor in rallies, challenging the might of Ford's Escorts RSs.

British Sports Cars

The classic front-engine, rear-wheel-drive, soft-top sports car appeared to be under threat from all directions in the 1970s. New US emissions laws were emasculating engines, affecting those European models that relied on lighter weight and relatively little power. Added to this, safety and insurance concerns mandated ugly, impact-resistant bumpers, and there was even talk of banning convertibles altogether – but the sports car survived, and thrived.

All-British ambience

The driver interface of the TR6 was the epitome of the purposeful British roadster: polished wood dashboard, white-on-black instruments that were easy to read through the three-spoke steering wheel, and stubby gear lever; the predominant matt-black trim cut down on glare.

⊳ Triumph TR6 1970

Origin UK

Engine 2,498 cc, straight-six

Produced from 1968 until 1976 and similar in shape to the TR5 but with a squared-off front and rear, the TR6 was as muscular as the TR series got. There were some who complained that, like the big Healeys, its power outstripped its poise, but that just made it more fun to drive.

Contoured lines

Power under the bonnet

All TR6s share the same basic 2.5-litre, straight-six engine; for the USA - the car's primary market it came with carburettors and just 105 bhp, but for European markets there was fuel injection and 150 bhp, later de-tuned to 124 bhp.

$\operatorname{\triangleleft}$ Lotus Elan Sprint 1971

Origin UK

Engine 1,558 cc, straight-four

Top speed 120 mph (193 km/h)

The fifth, final, and arguably finest incarnation of Colin Chapman's benchmark sports car, the Elan Sprint had 126 bhp of power from its big-valve, twin-cam engine, a 5-speed gearbox, and striking livery. Road manners were excellent thanks to independent suspension all round.

⊳ Jensen-Healey 1972

Origin UK

Engine 1,973 cc, straight-four

Top speed 120 mph (193 km/h)

Created by legendary sports-car designer Donald Healey, and built by Jensen, this roadster was the first car to use Lotus's new engine. It was great to drive and light on fuel, but could be temperamental. The short-lived estate version was called the Jensen GT.

⊲ MGB GT 1974

Origin UK

Engine 1,798 cc, straight-four

Top speed 105 mph (169 km/h)

The MGB GT's fastback body was more slippery than that of the $\ensuremath{\mathsf{MGB}}$ roadster, so the GT had a higher top speed. It was also more practical, with its tailgate opening onto a useful luggage area, and two small rear seats in the cabin.

polyurethane

bumpers introduced in 1974

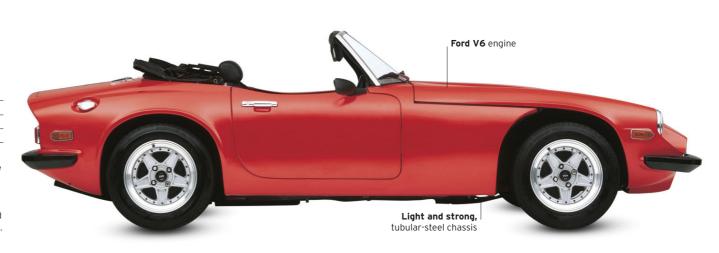

▷ TVR 3000S 1978

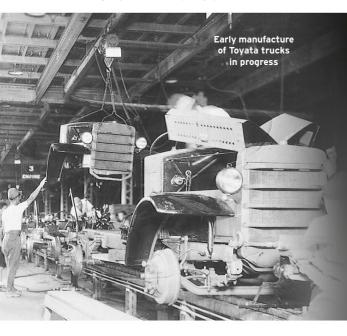

Origin UK

Engine 2,994 cc, V6

Top speed 121 mph (195 km/h)

Blackpool sports-car-maker TVR produced this convertible after three decades of being in business. An open-top version of the Ford V6powered 3000M, it had abundant power, was extremely lightweight and very fast, and boasted tight handling.

Great Marques The Toyota Story

Toyota was at the forefront of the Japanese motor industry's move into exports in the 1960s, establishing satellite plants around the world. It became a force in rallying but its foray into Formula 1 proved unsuccessful, and it has been rocked by quality scares in recent years, yet it remains the world's largest car-maker.

SAKICHI TOYODA INVENTED

Japan's first powered weaving loom in 1897, and his son Kiichiro created an automatic loom in 1924. After a visit to the US and Europe in 1929, Kiichiro began experimenting with petrolpowered engines and in 1933 he established an automotive business within the Toyoda Automatic Loom Works. Although the move was considered risky by some, the Japanese government encouraged Toyoda's diversification as it sought to foster domestic car production during the war with China.

Toyada bought cars from Chevrolet and DeSoto, which were taken to pieces and examined in detail. The lessons learned went into Toyoda's first vehicles, the A1 car and G1 truck of 1935 – soon refined into the AA and GA models, all of them using the 65 bhp, four-cylinder, Model A engine. In 1937 the name Toyota was adopted, and the automotive operation was hived off into a separate company, the Toyota Motor Corporation.

During World War II Toyota concentrated on truck production and engine research, which continued during the reformation of Japan in the late 1940s. The company then re-entered

Poster advertising early Toyota Celica

the passenger car market with the Toyopet SA small car in 1947. By 1958 Toyota was exporting its slow but solid Crown saloon car to the US. Its next step forward was the development of the Corolla, a compact economy car which boasted a 1077 cc, four-cylinder engine with more power than its competitors, a four-speed gearbox when many rivals only offered three ratios, modern strut-type front suspension, and minimal maintenance requirements.

Launched in 1966 it was an immediate success, helping Toyota to exceed export sales of one million vehicles by 1969. Toyota was so successful that the US, UK, and other export markets introduced import tariffs to protect their own motor industries from the new Japanese competition.

Toyota's export sales continued to increase into the 1970s with new generations of Corollas (eventually it became the bestselling car model of all time) and the introduction of the Corona, Carina, and Celica models. All of the cars were reliable and efficient, if less than enthralling to drive. Yet when Toyota chose to build cars for enthusiasts it could do an incredible job. The rear-drive AE86 Corolla GT of the 1980s was

famed for its handling and punchy, 128 bhp, fuel-injected, in-line four, and the same engine was mounted amidships in the delightful MR2 sports car. But these were all-too-rare highlights in an otherwise more workaday line-up.

Toyota's image was boosted by its World Rally Championship campaigns with the four-wheel-drive Celica GT-Four in the 1990s. The German-based Toyota Team Europe took championship wins in 1990 and 1992 with Carlos Sainz, in 1993 with Juha Kankkunen, and in 1994 with Didier Auriol. But the team was banned from rallying in 1995 for using an illegal air restrictor bypass system. In 1998 Toyota moved into sports car

racing, but the newly developed GT-One never lived up to its promise. Formula 1 beckoned next, but that proved to be a similar story. Ten seasons in the sport, at enormous cost to the company, delivered little beyond a pair of second place finishes each for Jarno Trulli and Tim Glock.

But Toyota continued to achieve sales success around the world, and sidestepped

Toyota Crown Hardtop Coupe, 1971 Designed for the 1970s, the Crown followed US styling tends; the power unit was a 2.6-litre

straight six.

"The MR2 ... sets **new standards** in a number of areas and it is **enormous fun** to drive."

AUTOCAR MAGAZINE ON THE TOYOTA MR2, MARCH 1985

Toyota MR2, 1984

The Fiat X1/9 had blazed the trail for affordable midengined sports cars, but this Toyota was a step up in quality, performance and handling; optional extras included a T-bar roof and a supercharger.

import restrictions by establishing new production facilities in its biggest markets

outside Japan. It introduced the first mass-produced hybrid, the Prius, in 1997 and by 2014 had overtaken Volkswagen and General Motors to become the world's biggest car-maker. A series of safety recalls cast doubts on Toyota's quality, but seemed to have little lasting impact on sales.

With the challenge from Volkswagen fading as the German company battles slowing sales in China and the fallout from its emissions scandal, Toyota has returned to its place as the biggest car-maker in the world and now looks set to remain there for some time.

Toyota Celica, 1971 Here was Japan's answer to Europe's Ford Capri and Opel Manta: a sporty coupe with both mundane and exciting engine options.

CLASSICS OF THE FUTURE

Supra Toyota's flagship performance coupé stepped up a gear in its A80 generation. Under the curvaceous new body was a twin-turbocharged version of the 3-litre, straight-six 2JZ engine, with the turbos acting sequentially for reduced lag. Japanese market cars had 280 PS (a power ceiling agreed in a gentleman's agreement between Japanese car-makers) but in Europe the Supra reached 326 bhp and could sprint from 0-60mph (96 km/h) in 4.6 seconds.

△ Toyota Supra 1992

Origin Japan

Engine 2,997cc, straight-six
Top speed 155 mph (250 km/h)

Spectacular in looks and performance, the twinturbo Supra could deliver supercar speed without the exotic price tag.

GT86 Toyota came up with the concept and Subaru (which Toyota part-owns) supplied the flat-four engine and did the bulk of the development work on this new rear-drive platform. The result was a snug sports coupé with quirky looks and only-just-enough power. However, its handling, the most responsive and adjustable of any car in its price range, made it very fun to drive. It was sold in the US as the Scion FR-S (until that brand was shuttered in 2016) and also built as a Subaru, the BRZ.

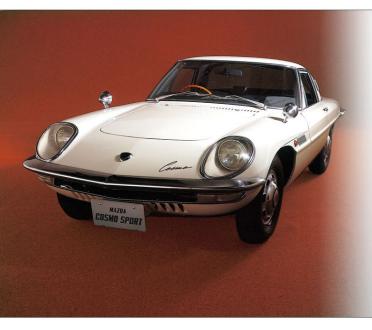

△ Toyota GT86 2012

Origin Japan

Engine 1,998cc, flat-four
Top speed 145 mph (233 km/h)

A Toyota/Subaru joint development that produced a sports coupé with an emphasis on responsive handling.

Mazda Cosmo 110S

Named for an era when the world was caught up in the excitement of the international space race, the diminutive Cosmo 110S was a sophisticated, two-seater coupé designed to sit at the very top of the Mazda range. At its launch in 1967 it was Japan's first rotary-engined production car, the Hiroshima-based company hoping to project an image of itself as daring, forward thinking, innovative, and unconventional.

THE COSMO WAS first seen as a prototype at the 1964 Tokyo Motor Show, after which a limited run was produced for evaluation by both the factory and its dealers. Launched to the public three years later, its most distinctive feature was a unique two-rotor, Wankel rotary engine. Lacking conventional cylinders and with a capacity of under 1.0 litre, its 110 hp meant it was good for around 115 mph (185 km/h).

The cars were built by hand at a rate of one a day, with more than 1,500 leaving the factory before production ceased in 1972. Two of these Route at Germany's Nürburgring, and showing

Mazda badge

From 1962–75, the stylized M for Mazda was derived from the name of the company's founder, Jujiro Matsuda, but for many Asian owners it also had an association with Ahura Mazda, the god of wisdom, intelligence, and harmony.

SPECIFICATIONS	
Model	Mazda Cosmo 110S 1967-72
Assembly	Hiroshima, Japan
Production	1,519
Construction	Steel monocoque
Engine	982 cc, twin-rotor Wankel engine
Power output	110 bhp
Transmission	4-speed manual
Suspension	Front coil springs, rear leaf springs
Brakes	Front discs, rear drums
Maximum speed	115 mph (185 km/h)

ON THE ROAD

Previously a manufacturer of competent but unremarkable family cars, Mazda made a courageous move into new territory with the Cosmo and – like the company's sensational victory decades later at Le Mans in 1991 – an explicit declaration of its faith in the value of novel technology.

Fast and undeniably stylish, the car's design has aged beautifully. Its rotary engine offered a driving experience quite unlike any other, with smooth power delivery belying its tiny size. As a demonstration of what a small, forward-looking company could achieve with the will and the right technical know-how, the Cosmo deserved its place in automotive history. It was special in the 1960s and decades later it still is. That it is a true classic is beyond question.

Cosmo name reflects the spirit of the age 2. Covered headlights give aerodynamic appearance 3. Neat detailing on front wings 4. Cabin air vent on side of pillar 5. Stylized rear light cluster 6. Sporty interior with vinyl trim and traditional wooden steering wheel 7. Full instrumentation underlines the car's sporting credentials 8. Short-throw gear lever for rapid gear changes 9. The Cosmo's revolutionary Wankel engine is notably compact

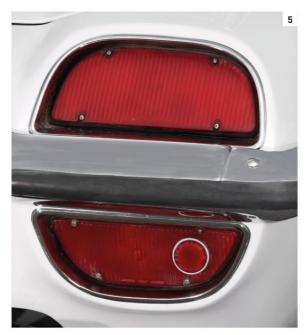

High-Performance Saloons

Premium saloons were offering all sorts of routes to performance and panache. The old-school method was to drop a big, lazy V8 into a medium-sized body. This was the path taken by Mercedes in Germany and Rover in the UK. Other car-makers went for smaller motors but added sophistication: fuel injection was one method of improving efficiency, while multi-valve cylinder heads would emerge as a common route to better breathing and more power. Another introduction was turbocharging, which hit

▽ BMW 3.0 CSI 1972

Origin Germany

Engine 2,985 cc, straight-six

Top speed 130 mph (209 km/h)

BMW lengthened its four-cylinder 2000 C/CS coupé to make space for the "Big Six" engine, and ended up with an all-time classic. Originally it was a 2.8-litre, but this definitive fuel-injected 3.0 CSi came in 1971. It led to the lightweight 3.0 CSL of 1972, which proved effective in touring-car racing.

□ Triumph Dolomite Sprint 1973

Origin UK

Engine 1,998 cc, straight-four

Top speed 115 mph (185 km/h)

Triumph built innovative cars with attractive styling on a tight budget. The Dolomite's shape was ageing by the early 1970s but the Sprint gave the car a new lease of life. Its clever 16-valve engine - one of the first in series production - gave it performance to challenge BMW's 2002 series.

Citroën CX2400 1974

Origin France

Engine 2,347 cc, straight-four

Top speed 113 mph (182 km/h)

The Citroën DS's successor combined all its predecessor's innovation with a transverse engine for increased passenger space. Inside, it was as quirky as cars come, with revolving drum instruments and minor controls on pods either side of the steering wheel. Facelifted in 1985, it stayed in production until 1989.

Big Six

The CSI's superb six-cylinder engine offered an energetic 200 bhp, thanks to Bosch fuel injection; the non-injected CS sister model had 180 bhp. The long-legged nature of the car made it an accomplished long-distance tourer, and many were sold as automatics.

Sport and sophistication

The CSI had sports seats and a three-spoke sports steering wheel, and power steering was standard - the car's only concession to driver ease. This was a taut, fine-handling car to relish driving along highways or twisty roads.

Special build

All BMW's six-cylinder coupés were built under contract by German coach builder, Karmann, of Osnabruck. The same basic shell was used for the spectacular CSL racing cars, albeit with aluminium bonnet, boot lid, and doors.

Hatchback body a first for Rover

All-alloy Rover V8 based on a Buick design

□ Rover 3500 SD1 1976

Origin UK

Engine 3,528 cc, V8

Top speed 125 mph (201 km/h)

Despite its advanced looks, high specification, and excellent dynamics, the SD1 rapidly gained a reputation for poor quality in the 1970s. Racing victory bolstered its image. Upgraded and relaunched as the Vitesse in 1982, it was driven to victory by Andy Rouse in the 1984 British Saloon Car championship. There were successes in Europe and Australia as well.

Saab 99 Turbo 1977

Origin Sweden

Engine 1,985 cc, straight-four

Top speed 122 mph (196 km/h)

Developed from the fuel-injected EMS model, the Turbo added a Garrett turbocharger to increase power. A hundred prototypes covered 2.9 million miles (4.7 million km) before Saab was happy with its prodigy. Rare, esoteric, and historically significant, the 99 Turbo is an undisputed classic

Body inspired by the

Pininfarina BMC 1800

Exotic Saloons and Tourers

Increasingly sophisticated technology made the best saloons and GT cars even better as the 1960s turned into the 1970s. At the top end power usually came from V8 engines, often built in the US, though V6s and V12s were used as well. All of them provided superior performance and refinement, generally with a stirring soundtrack. Independent suspension and disc brakes were standard, and automatic transmission was often available. It was an era of distinctive design, as car-makers blended the organic curves of the 1960s with the new sharp edges, wedge shapes, and aerodynamic efficiency.

abla De Tomaso Deauville 1970

Origin Italy

Engine 5,763 cc, V8

Top speed 143 mph (230 km/h)

Though styled by Ghia, the four-door Deauville had a disadvantage because, while it resembled a Jaquar XJ12 (which offered similar performance), it cost twice the price. The Deauville was only ever built in tiny numbers, but remained available into the late 1980s.

curved rear window, was inspired by the Corvette Stingray. Despite giving the model a V8 engine, Buick progressively cut back the car's power to conform with evolving emissions legislation.

Great Marques The Ford Story

Henry Ford was the first motor manufacturer to use massproduction techniques, and his Model T was the best selling car of its era. The company he founded has been one of the world's largest car-makers for decades, with an enviable automotive portfolio as broad as any in the industry.

FORD WENT TO WORK AS A MECHANIC in

Detroit at the age of 16, and experimented with newfangled gas engines in his spare time. He built his first "horseless carriage" in 1896 and finished a second in 1898. His designs won backing from Detroit businessman, William H. Murphy, who founded the Detroit Automobile Company with Ford as technical chief to build cars. However, the venture made little headway, and was wound up in 1901. Ford started again with his Henry Ford Motor Company, but failed to get a complete car ready for production. When his backers brought in the automotive entrepreneur Henry M. Leland as a consultant, Ford left the company, which was then reorganized and became Cadillac.

Ford then founded the Ford Motor Company in June 1903. Here, he was finally able to build a complete production car, the two-cylinder Model A. The four-cylinder Model B and six-cylinder, Model K, which followed were the result of Ford's partner Alexander Malcomson's desire to take the company upmarket. However, Ford wanted to concentrate on low-priced cars instead, and he bought out Malcolmson in 1906 so that he could follow his own path unhindered.

This led to the most successful of his cars, the Model T, in 1908. At \$850 the "Tin Lizzie" was more affordable than most cars, yet it offered neat, modern styling, a new four-cylinder engine, and

an easy-to-use transmission. It was a roaring success, so much so that Ford was forced to refine the production process to keep up with demand. In 1913 the company pioneered the use of a moving production line, cutting the time taken to build a Model T from over 12 hours to just 93 minutes.

But as much as the Model T had created the foundation for Ford's success, it almost brought the company to its knees. Unable to see that competitors were catching up to and surpassing the Model T, Henry Ford kept it in production until 1927, by which time it was hopelessly outclassed. Ford had nothing to replace it with, and car production had to be halted for six months while a new Model A was prepared.

Ford's son Edsel had been lined up to take over the company but he died young, so it was Edsel's son, Henry Ford II, who took control when Ford senior died in 1947. In the post-war period the company pioneered new market segments with the 1955 Thunderbird and 1964 Mustang,

Ford Anglia 105E, 1959

With this crisply styled model, Ford added driving enjoyment to economy cars, with a four-speed, synchromesh gearbox and a rev-happy engine.

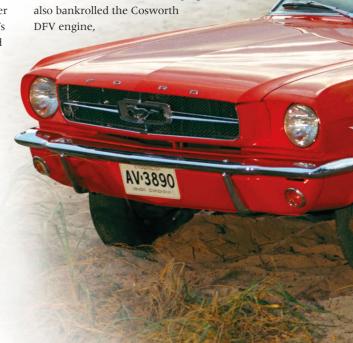

and earned a reputation for good-value cars for the mass-market. In Europe, Ford led sales charts

with the Anglia, Cortina, and Escort. But the Blue Oval was not restricted to humdrum family motoring: it instituted a "Total Performance" programme in the 1960s, which saw it succeed in practically every discipline of motor sport it cared to attempt. Its modern V8s won in Indycar racing and in NASCAR, the GT40 beat Ferrari at Le Mans, and in Europe the Anglia proved an effective saloon car racer while the Escort became the car to beat in rallying. Ford also bankrolled the Cosworth DFV engine,

Ford Thunderbird, 1958 After four years as a

relatively compact car, the 1958 T-Bird grew in length, weight, and luxury, as the design became ever more elaborate.

"The MKIV Cortina has all the attributes that sent its predecessors rocketing to the top of the sales charts."

MOTOR MAGAZINE, OCTOBER 1976

which became the most successful in the history of Formula 1 and then went on to a turbocharged second career as a CART/Indycar power unit.

However, Ford's reputation suffered in the 1970s due to the Pinto sub-compact's safety failings, which led to a recall of 1.5 million models, the largest recall in automotive history, up to that time. There were further troubles in the 1980s, as Ford struggled to cope with the effects of the energy crisis. It fought back with aerodynamic

body shapes and won new generations of customers thanks to the design leadership of J Mays and the technical efforts of Richard Parry-Jones.

Ford survived the recession of 2008 without government assistance, though it was forced to sell off multiple acquisitions, such as Hertz, Volvo, Aston Martin, Jaguar, and Land Rover. Today, the company has returned to profitability in the US, and is refocusing on Europe in an attempt to boost its performance and sales there.

Ford Mustang, 1964

Demand was so strong for Ford's "personal" car that sales topped 1 million units in less than two years.

CLASSICS OF THE FUTURE

Racing Puma The Puma coupé was reworked by Ford's rally engineers at Boreham with bigger Alcon brakes, wider track, wide aluminium wings, bucket seats, and extra power. The FRP engine was closely based on the standard 1.7-litre Puma unit, with hotter camshafts and freer-flowing intake and exhaust systems liberating an extra 30 bhp. The high price kept sales down, so only 500 were ultimately made – all by Tickford, which had previously assembled the Sierra RS500.

 \triangle Ford Racing Puma 1999

Origin IIK

Engine 1,679 cc, straight-four

This limited-edition performance version of the curvy Ford coupé had an engagingly lively character and rally car genes.

GT Ford kicked off its GT40 revival with a concept car in 2002, followed by a production GT in 2004. It was more than just a new run of an old car: it had a superplastic-formed aluminium chassis with aluminium body panels, and was noticeably bigger than the old racer. Power came from a 5.4-litre, four-valve version of Ford's Modular V8 engine boosted by a Lysholm screw-type supercharger. Just over 4,000 of this amazing blend of classic style and 21st-century technology were built.

 \triangle Ford GT 2004

Origin USA

Engine 5.409 cc. V8

Top speed 206 mph (332 km/h)

Although it looks just like the 1960's GT40, this was a completely new car, with an alloy chassis and body, and supercharged V8 power.

Hatchbacks

Hatchbacks were the big trend of the 1970s. Within a few years almost all small cars had adopted the front-engine, front-wheel drive layout and the semi-estate body style with three or five doors to add practicality. Fold-flat rear seats provided even more versatility. The seats were also split – one side could be folded but the other left in place for passenger use – extending the adaptability of the hatchback. Hot hatches, such as the Volkswagen Golf GTi, added performance and modern sportscar styling but retained most of the practicality. They proved immensely popular.

Fuel-saving design

American Motor's chief stylist Richard A. Teague developed the Pacer's aerodynamic design in response to the two fuel crises of the 1970s. The car's slippery shape achieved a relatively low drag efficiency, but its large engine proved thirsty. Nonetheless the car sold well.

Compact and quirky Designed as a compact car for US drivers more accustemed to the interior room found in full-size models, the Pacer offered space for a driver and three passengers. It was quickly dubbed "The Flying Fishbowl".

⊳ Austin Maxi 1969

Origin UK

Engine 1,748 cc, straight-four

Top speed 97 mph (156 km/h)

The packaging skills of Alec Issigonis (see pp. 146-47) shone in the transverse-engined Maxi, the last car he produced before retirement. It had hydrolastic suspension and a five-speed gearbox (rare then), but its cable operation proved unreliable. The Maxi sold well during the 1970s.

√ Volkswagen Golf GTI 1975

Origin Germany

Engine 1,588 cc, straight-four

Top speed 112 mph (180 km/h)

Developed by Volkswagen engineers as an out-of-hours side project, the Golf GTi proved to be a phenomenal sales success and set the pattern for generations of hot hatches to come. GTi versions have been a core part of Golf model ranges ever since.

⊳ Renault 14 1976

Origin France

Engine 1,218 cc, straight-four

Top speed 89 mph (143 km/h)

Renault sold almost a million of this pear-shaped, five-door hatch. It featured a transverse canted-over Douvrin engine with its transmission in the sump, which it shared with the Peugeot 104 and Citroën Visa. Spacious and comfortable to ride in, the car was prone to rust.

\lhd Fiat Strada/Ritmo 1978

Origin Italy

Engine 1,585 cc, straight-four

Top speed 111 mph (179 km/h)

Fiat was keen to stress that this car was built by robots. Its geometric lines led some to suggest it had been styled by them, too. The car had a peppy engine and tidy handling, but protection from rust was feeble.

Abarth's twin-cam performance versions were reputedly fun to drive.

Fast can be fun, but these cars demonstrated that there were plenty of other ways to get your motoring kicks. From pint-sized sports cars to the quirkiest of lightweight economy cars, they proved that good things really did come in small packages. And they matched the mood of the times. After the oil crisis in 1973, when fuel shortages almost led to the reintroduction of rationing, the cost of fuel skyrocketed and even those who could afford higher prices did not want to look wasteful. Suddenly small, efficient cars were all the rage.

Early models feature a 748 cc engine, replaced in 1975 by 848 cc unit

⊳ Reliant Robin 1973

Origin UK

Engine 848 cc, straight-four Top speed 80 mph (129 km/h)

This plastic-bodied three-wheeler was designed by Ogle and made by Reliant in Tamworth. It was popular in the UK during the 1970s' fuel crisis. It was thrifty due to its low weight, and in the UK it could be driven on a motorbike licence.

Ogle-designed fibreglass body

Engine 1,275 cc, straight-four

Top speed 95 mph (153 km/h)

The beloved Sprite/Midget was updated for the 1970s with features including rounded rear wheel-arches, a bigger engine, matt black trim, and a better hood. Revisions in 1974 added black bumpers and a Triumph Spitfire engine, and raised the ride height.

⊳ Honda Z Coupé 1970

Origin Japan

Engine 598 cc straight two

Top speed 77 mph (124 km/h)

Bigger-engined twin of the Z360, this little coupé followed on from the equally tiny N "kei car". Only the larger-engined Zs were sold in the UK and US, but they still produced only 36 bhp. However, while they were not particularly speedy, they were frantic and huge fun.

FRONT VIEW

Single front wheel

Like Reliant's previous three-wheelers, and in contrast to cars such as the Morgan, the Robin had its single wheel at the front. This made the steering and front suspension simpler and lighter.

REAR VIEW

Robin

Partly practical

The Robin's fibreglass body had a lift-up rear window for access to the load space. As the window did not extend very far, items had to be lifted high up to get them into the boot.

Simple interior

The Robin's dashboard was a fibreglass moulding with a speedometer and this combination fuel-and-temperature gauge. Switches were spread across the facia rather haphazardly.

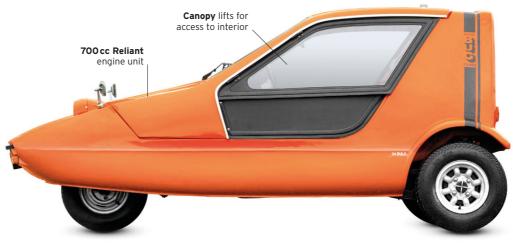

Origin UK

Engine 700 cc, straight-four

Top speed 76 mph (122 km/h)

The three-wheeled Bug embodied the spirit of youth, freedom, humour, and optimism with which the UK entered the 1970s. But it cost as much as a Mini, though it was quicker and more exclusive. Fewer than 3,000 people were inspired to buy one.

Two tiny seats in the back Disc brakes at front

< Suzuki SC100

Origin Japan

Engine 970 cc, straight-four

Top speed 89 mph (143 km/h)

Suzuki inserted a bigger four-cylinder engine into the back of its tiny Japanese-market Cervo coupé to make the export-model SC100 in 1978. Not fast, but enormous fun to drive thanks to rear-wheel drive and all-round independent suspension. Today's owners are more enthusiastic about them than ever.

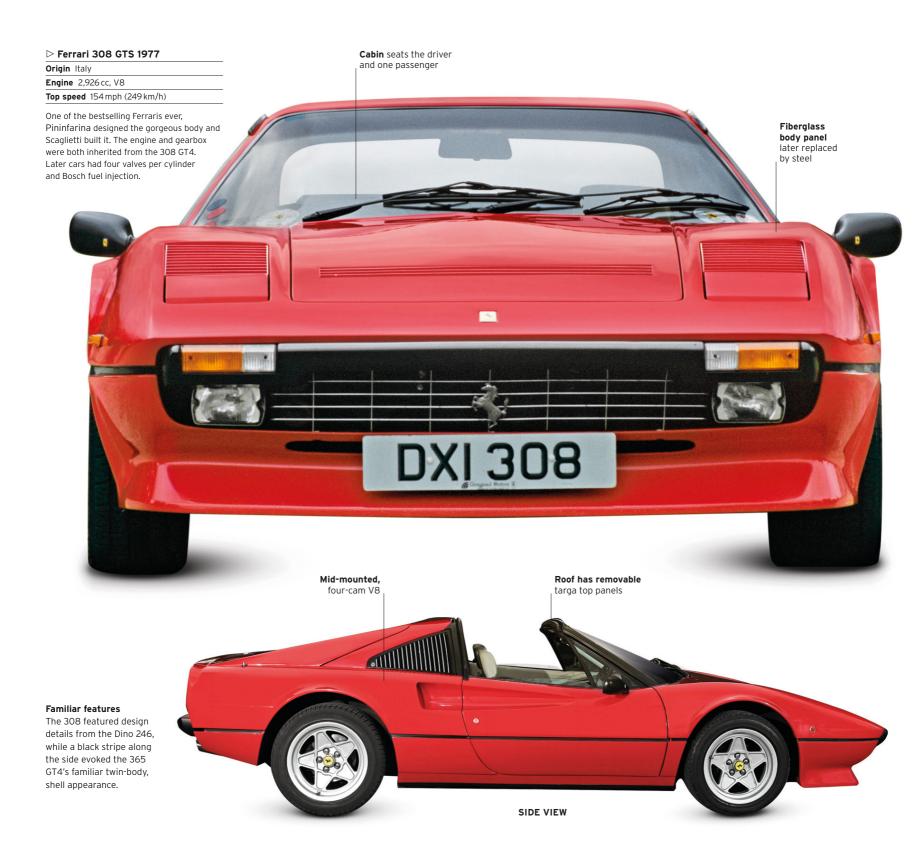

Mid-Engined Marvels

Sports cars at all levels adopted a race-proven, mid-engined layout in the 1970s. Mounting the motor amidships provided extra cornering agility, greater handling precision, and better traction. Moving the engine behind the passengers also meant the nose could be lower, which helped to improve aerodynamic efficiency and inspired some spectacular. wedge-shaped body designs. Luggage space could be reduced, however, and engine access was often tricky. Mid-engined cars also proved to be noisy, and in some designs the gear-change was poor. But even with small engines and relatively little power, they were the ultimate in driving thrills and drama.

Sleek design

Locating the engine behind the passengers allowed for a low, sloping bonnet that forced air downwards onto the nose and front wheels, improving grip. To provide cooling, conical air inlets were positioned behind the front doors, channelling the air to the engine bay.

√ Fiat X1/9 1972

Origin Italy

Engine 1,498 cc, straight-four

Top speed 110 mph (177 km/h)

The X1/9 brought mid-engined sports cars to the masses. Bertone designed and built the wedge-shaped body, and Fiat supplied the mechanical parts. However, from 1982 Bertone took over final assembly and marketing. The X1/9 remained popular in Europe and the US right up to 1989.

⊳ Matra-Simca Bagheera 1973

Origin France

Engine 1,422 cc, straight-four

Top speed 110 mph (177 km/h)

An aerospace company built this mid-engined coupé using engines and transmissions from Simca family cars. It had unusual three-abreast seating and a plastic body. A facelift of the car undertaken in 1976 affected almost every panel, and smoothed out the styling. It was replaced by the Murena, another three-seater, in 1980.

Steel body styled and built by Pininfarina

$\mathrel{\vartriangleleft}$ Lancia Beta Montecarlo 1975

Origin Italy

Engine 1,756 cc, straight-four

Top speed 118 mph (190 km/h

Proposed in 1969 as a V6 Fiat but launched as a four-cylinder Lancia, this model was reworked in 1978 with glass panels in the flying buttresses for better visibility, and the brake servo was removed. Lancia ultimately developed this into a successful turbo racing car.

⊳ Lotus Esprit Turbo 1980

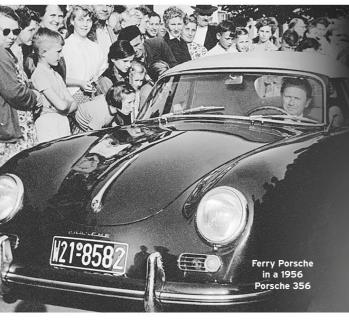

Origin UK

Engine 2,174 cc, straight-four

Top speed 148 mph (238 km/h)

Lotus road cars reached supercar status when the exotic Giugiaro-styled Esprit (introduced in 1976) was given a capacity upgrade and a turbocharger.

Great Marques The Porsche Story

A galaxy of legendary road and racing cars has carried the Porsche family name since 1948. There is an unbroken lineage from the earliest 356 to the current 911, spiced with countless race successes, although Porsche's non-sports car models have proven even more popular with audiences worldwide.

WHEN IN 1948

Dr Ferdinand Porsche decided to become a car manufacturer in his own right, Austria's most outstanding automotive engineer already had five decades of car design innovation behind him – including four-wheel drive, superchargers, rear-engined Formula 1 cars, and, of course, the Volkswagen Beetle.

Together with his son Ferry, Porsche created a

"weekend sports car", using the chassis of the Beetle but with a lighter, more aerodynamic body and a mildly tuned Volkswagen, flat-four, air-cooled engine. Out of this humble cocktail, the Porsche 356 was born, and one of the world's most exciting and innovative sports car names grew.

The company started production of the model in an old sawmill in Gmünd, Austria in 1948, and the first 52 cars were built entirely by hand. The 356 was agile and fun, but also uncommonly reliable and comfortable. Lightweight with nimble-handling, this rear-engined, rear-wheel-drive sports car was available in both hardtop coupé and open configuration.

The first Porsche 356 was sold in the US in 1950 and, with engine power upped from 40 to 60 bhp, the little rocket quickly established a cult following for its quick responses. Even today, these early Porsches are highly desired by collectors and enthusiasts worldwide.

In 1953 a sports-racing model called the 550 Spyder established Porsche as a major player in motor sport. Starting in more than 370 races around the European and US circuits between 1953 and 1965, the Spyder outshone the more powerful cars in its class. It was easy to handle on both the road and track, and was extremely

Porsche 550 Spyder
Actor James Dean (right) with Rolf Wutherich in Dean's
550 Spyder; the teen heartthrob would die in the car in a
crash in California in September 1955

flexible. But it hit the spotlight in 1955 when film-star James Dean was killed in his 550 in a freak road traffic accident in Cholame, California.

By 1958 the 10,000th Porsche had been built, including the now highly coveted 356 Speedster and the 100 bhp Carrera. But when the 911 replaced the 356 in 1963 a new chapter began for Porsche. The technical centrepiece was Porsche's all-new flat-six

engine, while the sleek, fastback shape (the work of Ferry's son Butzi) would rapidly turn it into an automotive icon. The Targa version of 1966 offered open-top motoring with aa removable roof panel and a fixed rollover bar. The 1973 Carrera RS, with 2.7-litre engine and lightweight construction, was the ultimate incarnation of the original 911.

The company rekindled its relationship with Volkswagen in 1969 when the partners codesigned the mid-engined 914, giving buyers a choice of VW or Porsche engines. Its replacement in 1975 was the Porsche 924 – the firm's first front-engined, water-cooled model.

Porsche had originally planned to replace its 911, including the 160 mph (258 km/h) Turbo, with its impressive 928 in 1977, another front-engined model with a brand-new V8 power unit. The 911 was hugely popular, however, and the never-ending demand kept the model in production with near-constant updates.

Porsche 356 Speedster

Seen on the left alongside a 356 Coupé in 1956, the Speedster had a racy, cut-down windscreen, that was immediately distinctive. From 1972 Porsche began offering its engineering research and development skills to outside companies. Its own products also continued to evolve, and in 1982 the 924 became the finessed 944. Faster than its predecessor, the new version included a Porsche-specific engine that could be purchased with or without turbocharging.

In 1990 a radically revamped 911 now offered four-wheel drive – the rear-engined layout, with pronounced rear-weight bias, was a challenge for the uninitiated driver. Three years later, the concept car for a new mid-engined roadster, the Boxster, was unveiled, and a production version joined the range in 1997, shortly after Porsche made its millionth sports car.

An historic era ended in 1998 when the 911's water-cooled engine ended the air-cooled association that stretched back to Ferdinand Porsche's Volkswagen. However, that was nothing compared to the company's radical next

"I couldn't find the sports car I dreamed of, so I decided to build it myself."

DR FERDINAND PORSCHE

Porsche 911S, 1970

Topping the range of 911s, now all with a longer wheelbase and 2.2-litre engines, was the 180 bhp S model. With lighter handling and increased performance, it had a top speed of 230 mph (370 km/h).

move – the introduction of the Cayenne sport-utility vehicle in 2002. Despite its mixed reception, it was admired for its handling. In 2009 the Panamera, a powerful

new luxury saloon joined the range. Like the Cayenne, it was created in partnership with VW. Yet, destined to appeal to new customers in China, it veered away from Porsche's usual offerings.

The open-cockpit Carrera GT, with a 6-litre, V10 engine, arrived in 2003 – a 200 mph (322 km/h) supercar bridging the gap between Porsche's road and race cars. At speeds above 70 mph (113 km/h),

the Carrera GT's automated rear spoiler could be deployed into the air draft to reduce lift by generating stabilizing downforce.

Porsche has become synonymous with sports and race cars alike, winning the Le Mans 24-Hour race more than a dozen times (in 1970 with the 917 and later with the 936 and 962 cars), among some 24,000 other race victories worldwide.

CLASSICS OF THE FUTURE

911 Carrera S The purity of the 911 concept has remained undiluted since 1963, although this contemporary model, codenamed the 991, used a third-generation platform with aluminium dominating its construction - its lighter weight offsetting its enlarged proportions. Extremely fast, with up to 430 bhp on tap, it could sprint to 60 mph (96 km/h) in just 3.9 seconds, and was the first car ever with a seven-speed manual gearbox.

\triangle Porsche 911 Carrera S 2012

Origin Germany

Engine 3,800 cc, flat-six

Top speed 130 mph (209 km/h)

The latest generation of the legendary 911, this is the most powerful non-turbo, rear-wheel-drive model - Porsche engineering purity at its finest.

918 Spyder Launched at the Geneva Motor Show in 2010, this mid-engined roadster, with plug-in hybrid technology, was manufactured between 2013 and 2015, with only 918 examples completed. A remarkable machine, thanks to its combination of petrol V8 engine and lithium-ion batteries, it delivered a combined power output of 887 bhp. The car lapped Germany's 12.8-mile (20.6-km) Nürburgring racetrack at 6 minutes 57 seconds, a world record for a road car.

△ 918 Spyder 2013

Origin Germany

Engine V8/twin electric motors
Top speed 218 mph (350 km/h)

Porsche broke new ground with this carbon-fibre supercar, mixing a Le Mans racing engine with electric motors front and rear.

Stylish Coupés

There was a greater choice of affordable, high-style coupés in this decade than there had ever been before. Some had two doors, some were offered with three, and almost all were based to some degree on the engines, transmissions, suspension components, and structural platforms of their bigger-selling saloon car brethren. All of them were designed with the same aim in mind: to offer clean-cut style, drama, and elegance that even the best saloon cars – which inevitably had to make more compromises in the name of practicality – could scarcely hope to match.

⊳ Mazda RX-7 1978

Origin Japan

Engine 1,146 cc, two-rotor Wankel

Top speed 125 mph (201 km/h)

The RX-7 sold on its clean European looks and the Swiss-watch smoothness of its rotary engine. Mazda was the first to make Felix Wankel's engine actually work and the RX-7 was a desirable and well-built car popular throughout the early 1980s.

Sunroof available

on some models

Datsun 240Z 1969 ≥ Datsun 240Z 1969

Origin Japan

Engine 2,393 cc, straight six-cylinder
Top speed 125 mph (201km/h)

The 240Z established Japan on the world sports car stage at a time when there was a gaping hole in that sector. It had the looks, performance, handling, and equipment levels. A great value sporting package that outsold all rivals and founded a Z-car dynasty.

Opel Manta GT/E 1970

Origin Germany

Engine 1,897 cc, straight-four

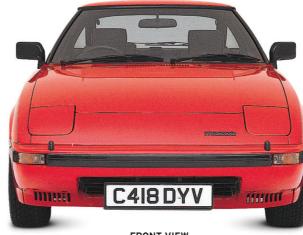

Top speed 116 mph (186 km/h)

Despite attractive styling and almost half-a-million made, most Mantas have rusted away: a great shame, as this was a civilized touring car with engines from 1.2 to 1.9 litres. The fuel-injected GT/E was the highest-specification model, though there was a rare turbo version in 1973.

Rotary Power

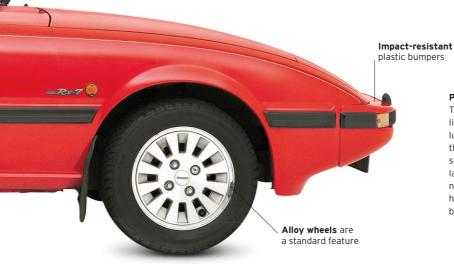

Instead of pistons in cylinders the Wankel engine has, in essence, triangular rotating elements inside a figure-ofeight shaped chamber. Because there are no reciprocating parts the engine revs very smoothly.

Smooth Snout

The RX-7 is a great example of the emerging sports car styling trend - a low, penetrating nose with pop-up headlamps, plastic bumpers, and an air dam to reduce front-end aerodynamic lift at speed.

Practical and Purposeful

The RX-7's rear window lifts up for access to the luggage space behind the rear seats. A big rubber spoiler is essential trim for a late-70s' sports car. There's no exterior brightwork here - everything is either body-coloured or black.

□ Alfa Romeo Junior Zagato 1970

Origin Italy

Engine 1,290 cc, straight-four

Top speed 105 mph (169 km/h)

Ercole Spada at Zagato achieved the impossible: he took an Alfa Romeo GT Junior and turned it into something even more arresting to look at. Alloy doors and bonnet made for minor weight reduction, but it was only fractionally faster than the standard car. The cost held back sales.

□ Porsche 924 1976

Origin Germany

Engine 1,984 cc, straight-four

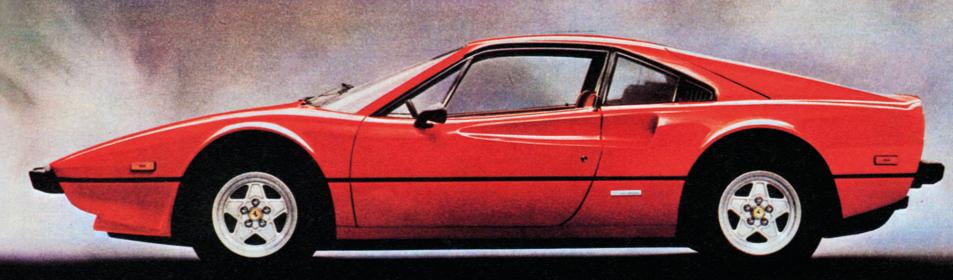

Top speed 125 mph (201 km/h)

Purists disapprove of the 924's provenance: originally it was a Volkswagen/Porsche joint venture, and its engine was shared with a Volkswagen van (though with a new Porsche cylinder head). But the front-engined 924 was a best-seller for Porsche and expanded its market beyond the dedicated sporting driver.

Only those who dare. truly live

<u>Ferrari</u>

ADVANCING TECHNOLOGY

△ **Grand unveiling**The Jaguar XJ220 prototype car is up

The Jaguar XJ220 prototype car is unveiled at the 1988 British International Motor Show held in Birmingham, UK. It recieved an overwhelmingly positive reception.

Cars from the 1980s are recognizably related to those on sale today. In overall concept, the typical car has hardly changed at all, and the electronic systems in modern cars owe a great deal to the technical advances of the 1980s.

Perhaps the most significant technical development was the introduction of automotive electronics and sensors, which began to appear throughout this period.

These triggered a mini revolution in engine management systems, increasing fuel efficiency, and leading to power units that could perform more reliably and consistently. Furthermore, functions that maximized convenience and luxury such as electrically assisted seats and windows could now be incorporated, safe in the knowledge that they would work properly.

Engine systems and transmissions advanced, too. Fuel injection, turbochargers, and four-wheel drive all began the decade as exotic new technologies and ended it as relatively commonplace features. Emissions rates were significantly reduced thanks to the widespread introduction of lead-free fuels and catalytic converters.

Designers were drawn to experiment with new formats for the family car, such as the off-road sport-utility and versatile multipurpose vehicle (SUV and MPV respectively). In the upper echelons, roadgoing supercars finally pushed top speeds beyond 200 mph (322 km/h).

Competent cars from South Korea now fought for a slice of world markets alongside their Japanese, American, and European rivals. Everywhere there was a drive towards increasing standardization as many outwardly different cars began sharing internal platforms to cut the huge investment costs now demanded to turn a simple design into complex reality.

"Mud, snow, water, woods - you can take a rented car anywhere. True, you can't always get it back - but that's not your problem, is it?"

SATIRIST P.J. O'ROURKE IN HIS 1987 BOOK REPUBLICAN PARTY REPTILE

Key events

- ▶ 1980 MG's world-famous Abingdon plant closes down.
- ▶ 1981 The Audi Quattro is the first car with four-wheel drive and a turbocharged engine.

- ▶ 1989 The M5 edition of the BMW 5 series is acclaimed as the world's best sports saloon.

\triangle Mini milestone

After nearly thirty years since its launch, the fivemillionth example of the original Mini is built in 1986. Production ceased in 2000 - after 5,387,862 cars.

Renault 5 Turbo

A true pocket-rocket, the 1980 Renault 5 Turbo was clearly related to the company's popular Super Cinq, but in terms of engineering, construction, and performance it was a whole different beast. Intended primarily for rallying, and therefore pitted head to head with cars such as the Lancia Stratos and Audi Quattro, it also became a successful road car with more than 3,500 sold over a four-year period.

WITH SOME RADICAL restyling, Bertone's Marcello Gandini transformed the familiar 5 Turbo into a two-seater with rear-wheel drive. The back half of the cabin was taken up by a fire-breathing, 1397 cc Cléon-Fonte, turbocharged, four-cylinder engine.

With a long and successful history in motor sport, the resulting machine nevertheless proved to be a real landmark car for Renault. As one of the most super superminis ever created, it went on to win the opening round of the 1981 World Rally Championship race, the historic Monte Carlo Rally.

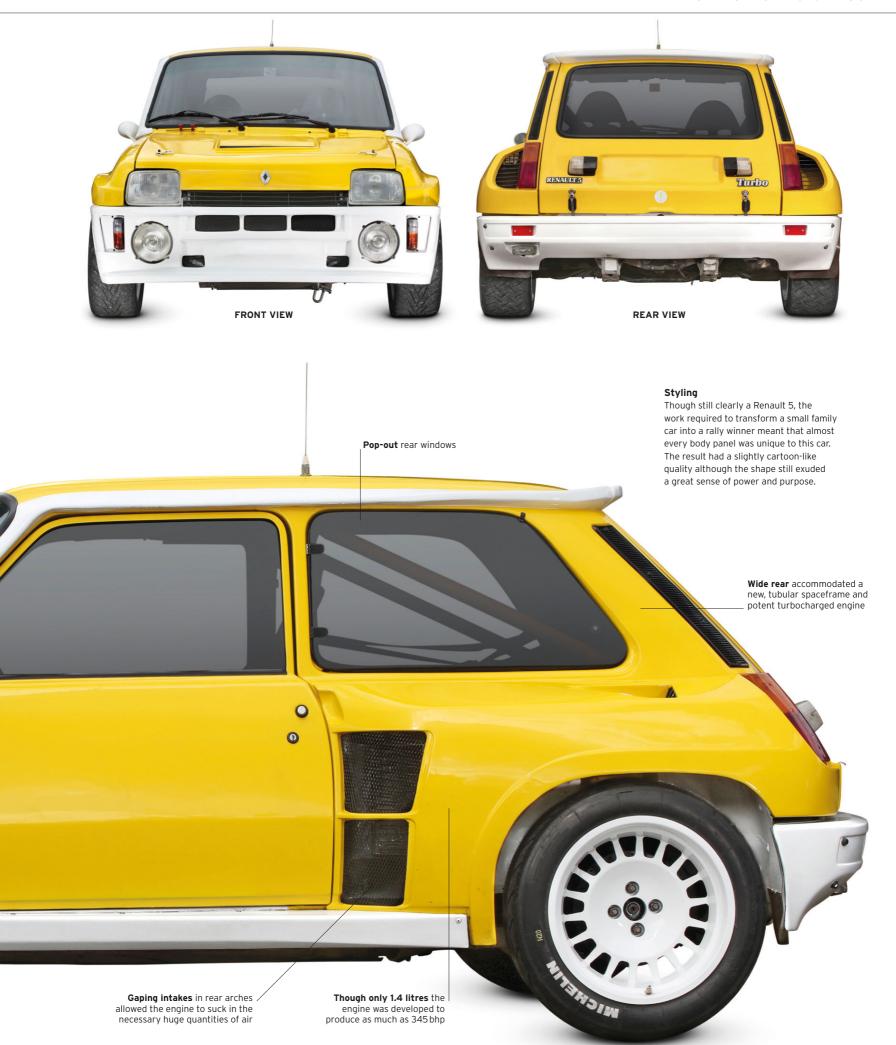

SPECIFICATIONS	
Model	Renault 5 Turbo, 1980-86
Assembly	France and Belgium
Production	3,576
Construction	Aluminium and fibreglass monocoque
Engine	1397 cc, straight-four
Power output	158 bhp (in standard form)
Transmission	5-speed manual
Suspension	Front and rear coil springs
Brakes	All-round discs
Maximum speed	130 mph (209 km/h)

Renault badge

Intended to highlight the company's quality, design, and engineering, the diamond badge was first introduced in 1925. Initially it included the word "Renault" on a central crossbar, but with increasing brand recognition this was removed in 1972 to simplify the graphic device.

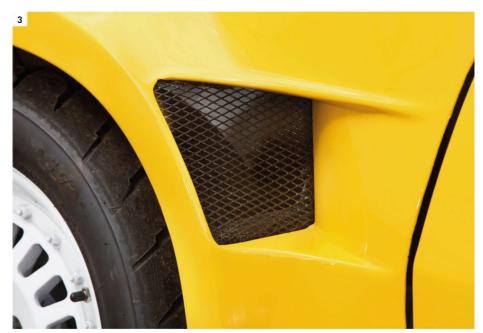

ON THE ROAD

Something of a golden era for rally car racing, the late-1970s and early '80s saw big names such as Ford, Audi, and Renault spending huge sums of money in a bid to wow spectators and car buyers alike. Renault's challenger looked much like the standard R5 but it was effectively an entirely new car, and one which arguably owed more to the company's pioneering Formula 1 contenders – the first to introduce turbocharging – than to the chic, bestselling supermini. Removing the body revealed the stark, purposeful racing machine it really was. That this could be driven quite legally on normal roads seemed astonishing, but it also explains why such an odd little vehicle commanded so much attention as a modern classic.

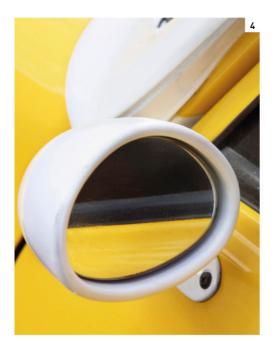

Rear lights are one of few parts shared with standard R5
 Fog lamps inserted into front skirt – essential for rallying
 Air intakes cool the front brakes
 Rear mirror encased in impact-resistant plastic
 Lightweight alloy wheels
 Turbo badge hints at car's performance
 Heavily modified dashboard features equipment used in rallying
 Complex electrical systems maximize performance
 Turbo-charged Renault engine

Performance 4x4s

Fast cars took a radical new direction in the 1980s. Led by Audi's Quattro, a new generation of performance machines adopted four wheel-drive for the first time, delivering optimum traction and improved handling. The Quattro was soon winning in rallies, where loose-surface traction is vital, and other manufacturers quickly followed suit. Lancia developed a four-wheel-drive version of its Delta HF Turbo and refined it into the definitive Delta Integrale, Ford produced their all-drive Sapphire Cosworth, and there were rally competitors from Peugeot, Toyota, and more – plus a host of all-wheel-drive performance cars dedicated to road use.

Four rings

Audi's four ring logo is a clue to the company's heritage. The rings represent the four German manufacturers that were brought together in the Auto Union group in 1932 - Audi, DKW, Horch, and Wanderer. The Audi name had disappeared in the 1930s but was resurrected in 1965.

Origin Germany
Engine 2,133 cc, straight-five

Top speed 155 mph (250 km/h)

The Quattro changed the way we think about four-wheel drive, and the Quattro Sport tailored it for rallying with a short wheelbase, 300 bhp engine, and a body made of aluminium, fibreglass, and Kevlar. It had all of the charisma, and nearly all the performance, of a Ferrari GTO.

Alloy five-cylinder engine

Lightweight power

Like the regular Quattro, the Sport had an in-line five-cylinder engine, but it was otherwise very different. The block was made of aluminium alloy, and the alloy head had four valves per cylinder. Road engines had just over 300 bhp - rally cars had 500 bhp.

⊳ Peugeot 405 1987

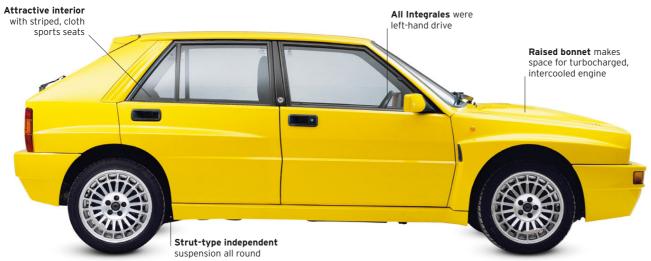

Origin France

Engine 1,905 cc, straight-four

Top speed 135 mph (217 km/h)

Peugeot followed up the excellent 205GTI hot hatch with the two-wheeldrive 405Mi16 sports saloon and its rare 405Mi16x4 four-wheel-drive stablemate. The smooth, 16-valve engine produced 158 bhp, and the chassis offered a blend of grip, agility, and ride quality. Sadly, however, the 405 was not built to last.

Five-spoke allov

wheels as standard

indicators

Top speed 141 mph (228 km/h) Renault's forgettable repmobile was turned into a dramatic sports car with the addition of a 2-litre turbo engine. Turbo Quadra models added fourwheel drive to tame the wheelspin on the original two-wheel-drive car. However, its questionable build-quality means there are very few survivors.

□ Lancia Delta Integrale 1987

Origin Italy

Engine 1,995 cc, straight-four

Top speed 134 mph (215 km/h)

Giugiaro's Delta was very modern for its time, and was European Car of the Year in 1980. The HF Turbo version added extra pace, then Lancia provided four-wheel drive and ultimately a 16-valve head to turn a stylish runabout into the multi-rally-winning Integrale.

Great Designers Giorgetto Giugiaro

A colossus in the world of design, Giorgetto Giugiaro is often regarded as the greatest car stylist of all time. A precocious talent, he showed an aptitude for design while still a teenager, and created some of the most beautiful car shapes in history. He also invented the angular "folded paper" design style, made truly remarkable concept cars – and even designed his own pasta.

Career highlights

- ▶ 1955 Giugiaro takes his first job at the Fiat Special Vehicles Styling Centre in Milan
- ▶ 1959 Nuccio Bertone offers a 20-yearold Giugiaro the position of design chief at his company
- ▶ 1965 Giugiaro moves over to head up design at Ghia
- ▶ 1968 Giugiaro sets up his own design company which will come to be named Italdesign
- ▶ 1971 Italdesign's first commercial project is completed – the highly-acclaimed Alfa Romeo Alfasud

\triangle Maserati Boomerang, 1971

The wedge-shaped Boomerang, with its stark, angled body, had a huge impact when first revealed. Elements of its design would be echoed in several Giugiaro designs in the following years.

- ▶ 1973 The first design for Volkswagen enters production - the VW Passat followed by the Mk1 VW Golf
- ▶ 1976 Giugiaro's design for the Lotus Esprit goes into production, while his New York taxi concept invents the MPV form
- ▶ 1999 Giugiaro is named "Car Designer of the Century" in Las Vegas
- D ≥ 2015 Giugiaro retires after VW acquires full control of the company he founded

BORN INTO A FAMILY of musicians and artists, Giorgetto Giugiaro showed a precocious talent from a very early age, and his first job at Fiat's styling department came when he was just 17 years old. A few short years later, in 1959, he had become the youngest ever head of styling at the design house Bertone. Nuccio Bertone offered Giugiaro the position on the strength of a sketch he had received from the young designer, and which the studio head subsequently sold to Alfa Romeo. That sketch was for the Alfa Romeo 2000; it was the very first production car in Giugiaro's long career as a designer.

His work at Bertone was sensational, and included such greats as the BMW 3200 CS, Alfa Romeo Giulia GT, and Fiat 850 Spider. In 1965 he left Bertone to take the top design job at Ghia, where he styled the De Tomaso Mangusta.

Then in 1968, aged only 29, Giugiaro felt confident enough to set up his own consultancy in Turin. This company – eventually named Italdesign – offered not only styling but also provided everything necessary to bring a design to production.

DE TOMASO MANGUSTA 1966 HEADLIGHTS, VW SCIROCCO 1974

This was an era when manufacturers actively courted design houses – and Giugiaro reigned supreme as brand after brand flocked to his studio, attracted by the elegant sense of proportion and crisp lines in his work. He fashioned many of the world's bestselling cars, including the seminal VW Golf of 1974, a clean-cut creation of singular simplicity. His "folded paper" design school produced such iconic vehicles as the VW Scirocco and Audi 80 (1974), Lancia Delta (1979), Fiat Panda (1980), and Fiat Uno (1983).

The tide of production cars continued to flow into the 1990s, with the bestselling Fiat Punto (1993) and widely lauded Lexus GS (1991) being Guigiaro classics. Guigaro also provided designs for Asian companies such as Hyundai, Daewoo, Isuzu, Proton, and China Brilliance.

SUPERCAR SUPERSTAR

The dream of any car designer is to have a supercar design put into production, and Giugiaro achieved this many times over. The Lotus Esprit, Maserati Bora, DeLorean DMC-12, and BMW M1 were all notable for their exceptionally clean lines. The Maserati 3200GT of 1998, meanwhile, adopted a highly original "boomering" tail-light design.

In the office
The models, drawing board, and even
the desk lamp display Giugiaro's creativity,
which the Italian constantly put to work
on creating innovative and exciting
new designs.

Giugiaro's influence as a trendsetter stemmed from his pure concept cars. The first of these was 1968's Manta, a dramatic coupé for the Italian car maker Bizzarrini, followed by such greats as the Alfa Romeo Iguana (1969), VW-Porsche Tapiro (1970), Alfa Romeo Caimano (1971), and VW Cheetah (1971).

Perhaps the most striking dream car that Giugiaro designed was the Maserati Boomerang. Designed in 1971 with an ultra-steep, 15-degree windscreen – the most extreme angle possible – the machine pushed at the frontiers of what was acceptable in car design. Other classic supercars followed: the BMW Nazca, Volkswagen W12, and several Bugatti concept cars. Lamborghini also asked him to create a small sports car, the Calà, which came tantalizingly close to production. The only marque with which Giugaro did not enjoy such success was Ferrari – just one of its cars bore his name, the GG50 built in 2005.

PIONEER OF PURPOSE

Giugiaro was a consistent pioneer whose influence is still felt in almost every area of car design today. For example, his 1976 New York taxi and 1978 Lancia Megagamma concept cars anticipated the Multipurpose Vehicle (MPV): a high-roof, one-volume vehicle with an adaptable interior layout.

Giugiaro was always more than just a stylist; aerodynamism numbered among his many interests. The 1980 Medusa, built on the Lancia Beta platflorm, boasted a drag coefficient figure of just 0.263, making it the most aerodynamic road car ever available at that time.

Bizzarrini Manta, 1968

One of the first independent designs produced by Giugiaro, the Manta was intended to demontstrate what he could do. It had a particularly unusual seating arrangement, with the driver positioned between two passengers.

Giugiaro never shirked from producing outrageous concepts. His 1986 Machimoto combined elements of both cars and motorbikes, and was capable of seating nine passengers astride two rows of seats.

With so many Volkswagen products to the Giugiaro name, it was perhaps unsurprising that VW bought a controlling interest in Italdesign in 2010, with Giugiaro himself remaining in place until his retirement in 2015.

Giugiaro's output was prolific. His work spanned arenas as diverse as menswear, Nikon cameras, Beretta guns, the Pendolino train, watches, and even pasta, but cars were always his first passion, and that was evident in every vehicle he created.

"I have designed cars for every major company but Honda, and one day I will do that."

GIORGETTO GIUGIARO, WHO NEVER DID WORK FOR HONDA

Superminis

The small-car template set in the mid-1970s matured in the '80s. Front-wheel drive, a transverse four-cylinder engine with the gearbox and final drive on the end, and a hatchback body with three or five doors became the format for the majority of car sales in Europe and beyond, as buyers recognized the practicality and all-round competence of these superminis. Advances in suspension design meant they were fun to drive, too, and car manufacturers followed the lead set by the Volkswagen Golf GTI to insert hot, fuel-injected motors into their shopping cars, making for compact performance machines.

\triangledown Austin Mini-Metro 1980

Origin UK

Engine 998 cc, straight-four

Top speed 84 mph (135 km/h)

Only 21 years after the Mini, in 1980 a new British supermini arrived. The Mini-Metro - later just plain Metro - carried over the old A-series engines dating back to 1953. Well-packaged, it had innovative Hydragas suspension.

Dopel Corsa GSi/GTE 1983

Origin Spain

Engine 1,598 cc, straight-four Top speed 117 mph (188 km/h)

The "hot hatch" GSi/GTE joined GM's supermini Corsa/Nova family a bit later than the other 1.0-1.4-litre models and was by far the most stylish looking, and fastest, of the group. Tough, reliable, and good fun, it was built in Spain like Ford's Fiesta.

⊲ Fiat Uno 1983

Origin Italy

Engine 1,301cc, straight-four
Top speed 104mph (167km/h)

The 127's successor was a great all-rounder, and sold 6.5 million by 1994. Giugiaro's Italdesign company designed the Uno with a taller body than other superminis, providing more passenger space. Nimble handling and eager engines added to its popularity.

standard

Great Marques The BMW Story

Bayerische Motoren Werke (BMW) started life as an aero engine manufacturer in Munich, Germany in 1916, before diversifying into road vehicles. The company had a burst of glory in the 1930s, but it was only in 1961 that BMW really started its journey to become one of the world's finest manufacturers of sports saloons.

1929 when it bought the Eisenachbased company that produced the Dixi – an Austin Seven built under license. By 1932 it had developed its own car, and just two years later had designed a six-cylinder engine, installing it in several handsome cars that all featured "twin kidney" grilles. These included the 326 saloon and 327 tourer. The

stylish 328 was the sports car of the

line-up, and it soon became a force to

BMW ENTERED THE CAR sphere in

be reckoned with on the race circuit, racking up more than 100 class wins in 1937.

BMW's Munich factory was heavily bombed by the Allies during World War II due to its production of aircraft engines for the Luftwaffe, and later its Eisenach plant in eastern Germany was seized by the Soviets. At the end of the war, its six-cylinder engine technology was

appropriated by Bristol in the UK, which used it to launch its own, high-quality sports car.

BMW had to start again from scratch. It began with motorcycles in 1948, and in 1951 launched

BMW Isetta (left) and 502, 1955

The 1950s was a rocky decade for BMW; the Isetta bubble car venture made up for losses on the luxury V8-engined range, such as the 502.

a V8 luxury car called the 501, nicknamed the "Baroque Angel" for its shapely contours. The V8 theme continued with the 503 luxury coupé and polished 507 two-seater roadster. But all these cars were unprofitable, and the company searched for a lifeline. It found it in the Isetta three-wheeler. The rights were acquired from Iso in Italy, a BMW motorbike engine was installed, and the tiny, bubble-shaped, economy car went on to sell in its thousands. The slightly larger 600 and 700 models followed, with two-cylinder engines.

Financier Herbert Quandt acquired the struggling firm in 1959, and changed BMW's direction.

BMW 507, 1955 Surely one of the most beautiful and powerful of all 1950s readsters, a mere 253 examples were sold.

"We at BMW do not build cars as consumer objects. We build mobile works of art."

CHRIS BANGLE, FORMER BMW CHIEF DESIGNER AND CREATOR OF THE MARQUE'S "FLAME SURFACING" DESIGN THEME IN THE 1990S

In 1961 its Neue Klasse 1500 was launched – a sporting saloon with a new overhead-camshaft engine aimed at company executives, followed by 1.8- and 2-litre versions. Coupés came next, and then the compact 02 two-door models, before a range of impressive six-cylinder saloons in 1968. Both the 02 and the CSL coupé saw great success in track racing, the CSL tussling memorably with Ford Capris to win the 1973 European Touring Car Championship. The 2002 Tii was the first European production car with a standard turbocharger.

The Neue Klasse was replaced by the 5-series in 1972 – a mid-range executive car that combined safety, comfort, superb handling, and slick styling.

The 5-series was joined in 1975 by the smaller 3-series, the larger 7-series in 1977, and the 6-series coupé in 1976, in a well-honed range based on rear-wheel drive, and superb four- and six-cylinder engines. The 1979 M1 mid-engined supercar was also impressive, albeit short-lived.

BMW "Neue Klasse", 1961

BMW's flourishing destiny was set by the launch of the lively 1500 in 1961, and its sports saloon descendants, like this 2000 model.

In the 1980s the 3-, 5-, and 7-series saloons were all replaced by carefully evolved successors, and in 1987 a magnificent V12 engine arrived for the top 7-series, and the all-new, 8-series coupé. But the most iconic BMWs of this decade were the M-Sport derivatives. The 1985 M535i and M635i used the M1's 24-valve, 286 bhp, 3.5-litre, straight-six, for sub-7 second, 0-60 mph

(96 km/h) acceleration allied to impressive handling in a sophisticated and expensive performance package.

BMW's turbocharged Formula 1 engine powered Brabham driver Nelson Piquet to the World Championship in 1983. The marque also supplied V10 engines to Formula 1's Williams team between 2000 and 2005.

During the 1990s BMW expanded the scope of its core range by developing the Z3/Z4 sports cars, the X-series of SUVs, and electric and hybrid models for both city driving and long-distance touring. BMW also owns the Mini and Rolls-Royce marques.

CLASSICS OF THE FUTURE

M5 With performance, sounds, and responses often compared to Ferrari supercars, this was regarded as one of the finest sports saloons ever built. When announced, it became the world's fastest-production four-door saloon. It was also the most successful M5, with 19,564 saloon, and 1,025 Touring estates made between 2005 and 2010. Besides the engine, it had new body panels and alloy wheels, a wider track, and an F1-inspired, launch control system so standing starts could be conducted automatically.

 \triangle BMW M5 2005

Origin Germany

Engine 4,999 cc, V10

Top speed 155 mph (250 km/h)

Slick and stylish, the M5 set the benchmark for high-performance saloon cars, delivering the power figures expected of BMW.

i8 The turbocharged, three-cylinder petrol engine provided power for long-distance driving and also charged the lithium-ion battery pack so the car could be used in electric mode - with simulated engine noises to alert pedestrians. Carbon-fibre, construction and exceptional aerodynamics helped limit fuel consumption. The electric motor could be fully recharged in about 3½ hours. Laser headlights were an innovation, while "butterfly" doors were spectacular, and rear-view cameras useful.

△ BMW i8 2014

Origin Germany

Engine 1,499 cc, straight-three and electric motor

Top speed 160 mph (258 km/h)

BMW's futuristic, plug-in hybrid supercar was capable of 134 mpg (47 km/l). Its rear-mounted, 1.5-litre engine was linked to an electric motor at the front.

Very Fast Saloons

Supercar pace with saloon car space was yours for the asking, thanks to super saloons with epic engines. The in-house projects, like Mercedes-Benz's mighty 500E and Aston Martin's futuristic Lagonda, were joined by collaborations across big automotive groups – Fiat's luxury car brand Lancia dropped a Ferrari engine into its Thema, while General Motors' sports car maker Lotus reworked the Opel Omega/Vauxhall Carlton with turbo power. All these cars delivered executive-level comfort and the kind of performance big saloons had never offered before – provided you could cope with their spectacular price tags.

Ferrari power This was the second Lancia after the Stratos to have a Ferrari engine, in this case the Tipo 105L borrowed from the mid-engined Ferrari 308, its 32 valves signalled in the saloon

car's name.

Unique features

The discreet yellow radiator badge was one of the few visual clues to this Lancia's special status. Another was the bespoke leather interior, by Italy's upmarket Poltrona Frau.

⊳ Aston Martin Lagonda 1980

Origin UK

Engine 5,340 cc, V8

Top speed 143 mph (230 km/h)

A computerized digital dashboard and harsh wedge styling made the Lagonda seem futuristic in the 1970s. Announced in 1976 but problems with the futuristic dash meant it was late 1979 before the first customer car was delivered, the model truly coming of age in the 1980s.

$\mathrel{ riangled}$ Maserati Biturbo 1981

Origin Italy

Engine 1996cc, V6

Top speed 132mph (212km/h)

To expand the market for his Maserati marque, Alejandro de Tomaso launched this turbocharged, rear-drive saloon. Some thought the styling was too staid, and build quality was patchy, but the motors were punchy and the interiors were a fine blend of Italian wood and leather.

ightharpoonup Ford Taurus SHO 1989

Origin USA

Engine 2,986 cc, V6

Top speed 143 mph (230 km/h)

Yamaha reworked a Ford V6 engine for use in a sports car and limited-run performance saloon, but only the four-door made it to production. The Taurus SHO proved so popular it became a regular production model and survived for two more generations.

Rear suspension has a self-levelling system Six-speed manual gearbox Extended arches cover wider wheels

√ Vauxhall Lotus Carlton 1989

Origin Germany/UK

Engine 3,615 cc, straight-six

Top speed 177 mph (285 km/h)

Sold in mainland Europe as the Opel Lotus Omega, this was a modified version of the standard Carlton saloon. The engine was enlarged, reinforced and turbocharged with twin Garrett T25 units and a water/ air intercooler. to give phenomenal performance. Just 950 were built.

Great Marques The Volkswagen Story

Volkswagen began life with the humble Beetle, Adolf Hitler's vision of a car for the masses. It was a huge success, becoming the best-selling car of its era, and giving VW a foundation from which it grew into Europe's biggest car-making group - before the 2015 diesel emissions-test cheating scandal rocked it to its core.

MASS PRODUCTION OF VOLKSWAGENS did not

begin until after World War II. Allied car-makers turned down the chance to take over the company's Wolfsburg factory and the curious little Beetle with its rear-mounted, air-cooled engine, so the British army, in the shape of Major Ivan Hirst, reorganized the war-ravaged production line and secured an order from British forces in Germany for 20,000 cars. Production was soon running at 1,000 cars a month, limited by supplies of raw steel and the availability of factory workers. However, the simplicity, reliability, and low cost of the Type-1, or Beetle, made it the ideal car for a Europe struggling to repair itself in the aftermath of war and by 1955 more than a million Beetles had been built.

VW Beetle 1303, 1970

The Super Beetle was the apex model, with its padded dashboard, curved windscreen, and greater luggage space.

The United States was a major export market, and there the Beetle was a cult car, sold on its antifashion, anti-establishment

image. Advertising agency Doyle Dane Bernbach turned what many Americans saw as the Beetle's weaknesses – small size, four-cylinder engine, and lack of annual styling changes – into selling points in a classic series of adverts.

Throughout the 1960s Volkswagen continued to rely on the Beetle and its derivatives, such as the Type-2 camper van, the stylish Karmann Ghia, and the 1500/1600 saloons. Although the final variants were the four-door 411 and 412 of the early 1970s, Beetle saloons were produced in Germany until 1978, and the convertible was

"If you've wanted to buy a car that sticks out a little, you know what to do."

VOLKSWAGEN CAMPER ADVERTISEMENT, 1968

exapnding, acquiring new technology by buying Audi in 1965 and NSU in 1969. These two companies were producing advanced frontwheel-drive cars, and Volkswagen eventually adopted this technology for its front-wheel-drive Golf and Polo hatchbacks,

which effectively replaced the Beetle in 1974. They arrived at just the right time, as one oil crisis after another had persuaded buyers, especially those in the US, to switch to smaller cars.

While the Golf had been conceived as a family car, one group of Volkswagen engineers had other ideas. Working in their own time, they developed a hot fuel-injected version of the three-door Golf with motor sport in mind, and then persuaded a reluctant Volkswagen management to put it into production as the Golf GTI. Its success surprised everyone: The GTI remains a legend and staple of the VW lineup today.

Volkswagen established low-cost manufacturing plants in Eastern European countries after the fall of the Berlin Wall in 1989 and was one of the first European companies to set up a joint venture in China. NSU's Wankel-engined Ro80 proved to be an expensive failure, but Audi cemented its place as a premium BMW and Mercedes rival.

Volkswagen 411, 1968

The rear-engined, air-cooled theme reached its limits with this large, four-door family saloon - not a notable success.

Developments such as the novel, narrow-angle five-cylinder VR5 and six-cylinder VR6 engines in the 1990s, and the

DSG twin-clutch transmission in 2003, enhanced Volkswagen's reputation for quiet innovation. And while the original Beetle continued to sell well for many years in Brazil and Mexico, Volkswagen introduced a New Beetle, which had nothing in common with the original car except its fashionable retro styling, but which became a successful niche model.

In 2008 Volkswagen became, briefly, the biggest company in the world with a stockmarket value of €300 billion thanks to the activities of hedge funds and investments. In 2011 it brokered a merger with Porsche and seemed destined to become the world's largest car-making group – until in 2015 tests in the US showed that it fitted its vehicles with "defeat devices" to circumvent emissions regulations. The revelation has cost Volkswagen billions of dollars, and caused a major rethink in its future model strategy as the company struggled to rebuild its credibility in the wake of the scandal.

CLASSICS OF THE FUTURE

Polo G40 Volkswagen gave its small hatchback a big heart in G40 form, starting with the 1,272 cc four-cylinder engine that delivered 75 bhp. Adding an unusual supercharger with a scroll-shaped element - Volkswagen called it the "G-lader" delivered 115 bhp and sparkling performance. Just 500 G40 models were made in 1987, but when the Polo was facelifted in 1990 the G40 was made a fixture in the range.

\triangle Volkswagen Polo G40 1990

Origin Germany

Engine 1,272 cc, straight-four

Top speed 107 mph (172 km/h)

The "G-lader" supercharger transformed the Polo into a pocket-sized performance car. A high price meant that it never sold well, making it a rare collector's car today.

Corrado VR6 This crisp sports coupé had a novel speed-sensitive rear spoiler. Introduced in 1988 with 1.8-litre engines in naturally aspirated and G60 supercharged forms, it came of age when mated with Volkswagen's VR6, a V6 with just 15 degrees between cylinder banks. At the same time the running gear was upgraded and the Corrado was given wider arches and a humped bonnet, which greatly improved its looks. It was attractive, smooth, and rapid, but too expensive to sell well.

△ Volkswagen Corrado VR6 1992

Engine 2,861cc, V6

Top speed 146 mph (234 km/h)

Volkswagen's front-drive coupé was stylish and well-mannered. Its narrowangle. V6 engine gave the car smoothness, pace, and a refined soundtrack.

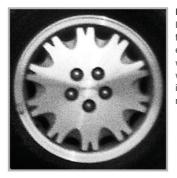

Volkswagen Golf GTi MKI, 1975

Fitting the Golf with a fuel-injected engine, wide wheels, and taut suspension produced the granddaddy of all "hot hatchbacks".

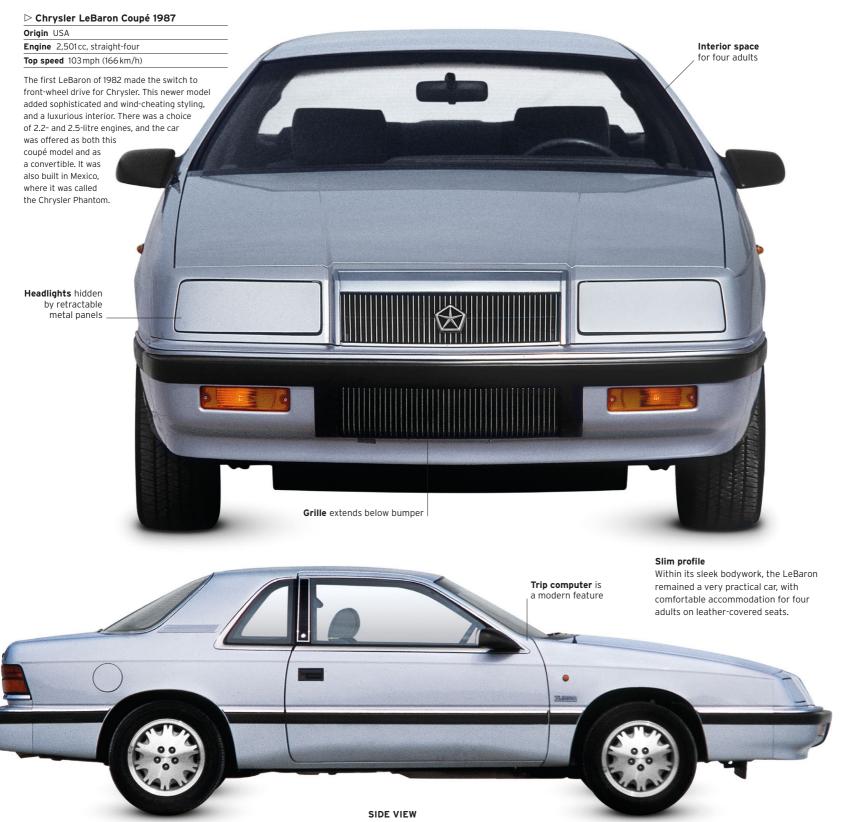

US Compacts

Two oil crises in the 1970s prompted US car buyers to seek more fuel-efficient alternatives to Detroit's vast and profligate land yachts. At first, those newcomers came from Japanese car-makers, such as Honda and Toyota, and European brands, such as Volkswagen and BMW, which were already building what Americans considered to be small cars for their own buyers. US car-makers hit back with their own compact cars, not always with great success. But they only really got into their stride in the early 1980s, developing new platforms that were the basis for hundreds of thousands of compacts during the decade.

Individual alloy wheels

In keeping with the sporty character thar Chrysler wanted the LeBaron to embody, the car came as standard with a set of specially designed alloy wheels; they reduced unsprung weight in order to make the handling slightly more nimble.

In the late 1970s AMC plugged the gap between its off-road Jeeps and its Concord saloon car range with this pioneering, US, four-wheel-drive crossover. The Ferguson Formula four-wheel-drive system was completely automatic. Production ran up to the Chrysler takeover of AMC in 1987.

Body is very similar to Chevrolet Cavalier

Independent front suspension and raised ride height

Engine 1,835 cc, straight-four

Top speed 100 mph (161 km/h)

In a rush to enter the compact car market - and to compete with European and Japanese imports - General Motors failed to turn its worldwide J-car platform into a convincing Cadillac. However, equipment levels were good - a 4-speed manual transmission and four-cylinder engine were standard.

\triangleright Dodge Aries 1981

Origin USA

Engine 2,213 cc, straight-four

Top speed 98 mph (158 km/h)

This spacious, front-wheel-drive saloon based on Chrysler's K-car platform was *Motor Trend* Car of the Year in 1981. It sold 1 million units in seven years, and alongside its sister car, the Pymouth Reliant, it helped to improve Chrysler's fortunes in the 1980s.

Torsion-beam

rear suspension

□ Pontiac Fiero GT 1985

Origin USA

Engine 2,838 cc, V6

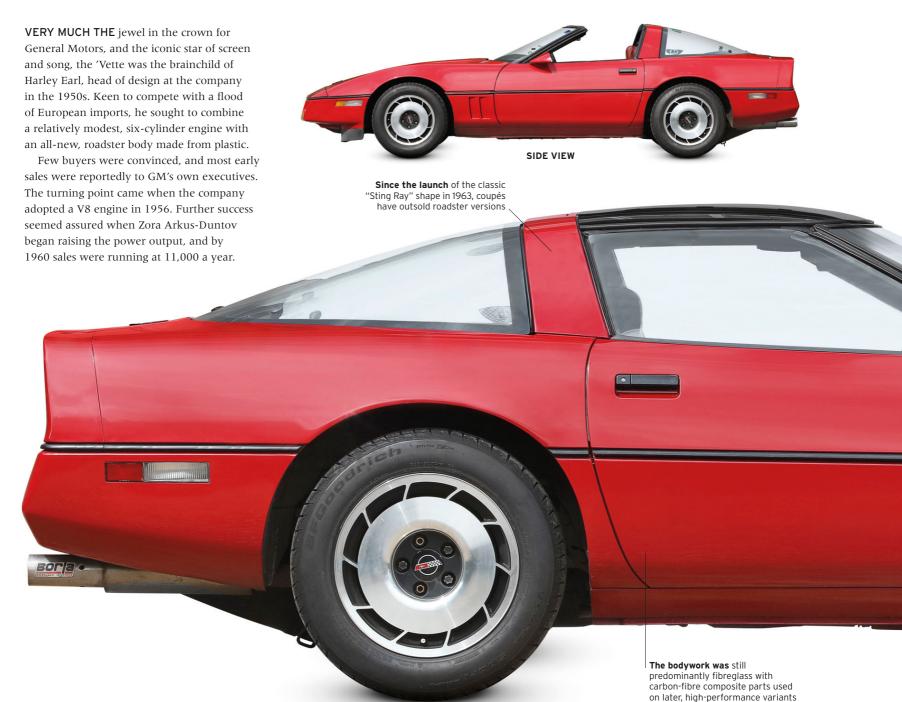

Top speed 124 mph (200 km/h)

General Motors astonished the world with the mid-engined, two-seater Fiero sports car. With economy-car roots and a four-cylinder engine in base models keeping the price low, it fitted into the GM range below the Chevrolet Corvette. It sold 370,158 units in five years.

Chevrolet Corvette

One of the most evocative names in the business, after more than 60 years on the road the Corvette is still very much the definitive American sports car. Originally intended as a rival for the UK's Jaguar XK120, it cost almost twice as much as previous Chevrolets and sold slowly at first, only really taking off when V8 engines were added. Since then a process of continual development has kept the Corvette at the very forefront of US motoring.

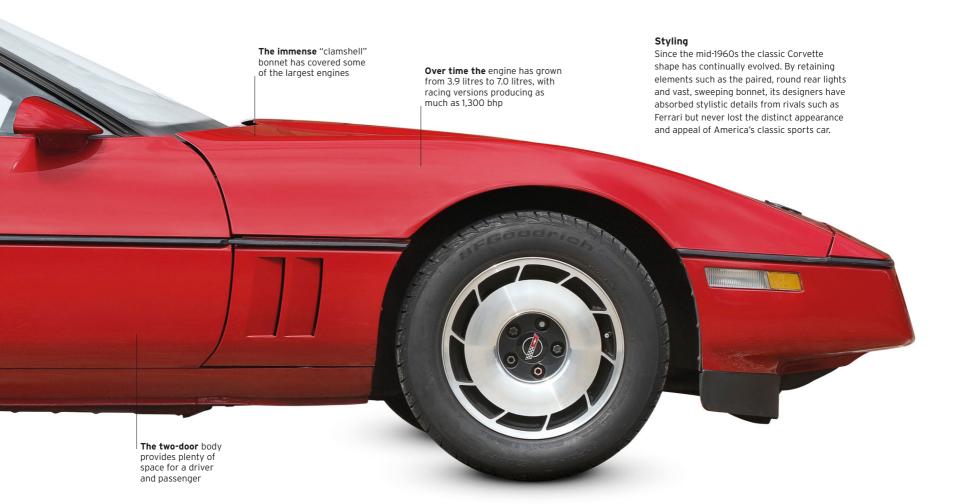

REAR VIEW

Chevrolet badge

When he introduced it to the world in 1913, company cofounder William C. Durant claimed to have copied the "bow-tie" logo from a design on the wallpaper in a French hotel. This story has since been disputed, and conflicting accounts have emerged, but the new Chevolet badge proved instantly recognizable to early customers.

SPECIFICATIONS	
Model	Chevrolet Corvette, 1984-96
Assembly	USA
Production	317,700
Construction	Steel monocoque with fibreglass panels
Engine	5,735 cc, V8
Power output	230-330 bhp
Transmission	4- or 6-speed manual; 4-speed automatic
Suspension	Front and rear fibreglass leaf springs
Brakes	All-round discs
Maximum speed	140-180 mph (225-290 km/h)

ON THE ROAD

By the mid-1980s the Corvette had moved into its fourth generation, and would-be buyers were keen to see the first total redesign of the car for nearly 20 years. The 5.7-litre V8 was only slightly more powerful than its predecessor, but in both coupé and roadster form the new look was clean and fresh. Less curvy than the outgoing car, no-one could mistake it for anything but a Corvette and the shape aged extremely well.

By European sports-car standards these were large cars, combining impressive levels of performance and comfort. Those in good condition always found willing buyers, especially rarities such as the 1988 limited edition launched to mark the Corvette's 35 years as an American icon.

Pop-up headlamps reduce drag when closed
 Stylish lightweight alloy wheels
 Fins channel cooling air to brakes.
 Repeater sidelights set into rear bumper
 Corvette badge boldly displayed on rear panel

 Twin rear lights – a long-standing Corvette feature
 Twin pairs of dual exhausts pipes
 Interior badge detailing performance statistics
 Interior door handles
 5.7-litre V8 engine

Two-Seater Roadsters

Planned US legislation threatened to outlaw convertibles – which meant almost all sports cars – but the expected new laws were never implemented. By the 1980s sports cars still in production were antiquated, but a few survived and adopted new engines and running gear to compete with a whole new generation of sports cars aiming to take their place. Most adopted the traditional front-engine, rear-drive layout but there were mid-engined cars, experiments with front-wheel drive, and even some that eschewed the open roadster body for a compact, fixed-roof shape. It was a renaissance for the sports car.

⊳ BMW Z1 1986

Origin Germany

Engine 2,494 cc, straight-six

Top speed 140 mph (225 km/h)

BMW's first two-seater roadster since the 507 of the 1950s had a novel steel platform with plastic outer panels that were easily removable, and drop-down doors. Suspension was from the E30 3 series at the front, with a new multilink rear. The company sold 8,000 cars.

Undertray cuts aerodynamic drag

⊳ Marcos Mantula 1984

Origin UK

Engine 3,947 cc, V8

Top speed 150 mph (241 km/h)

The classic Marcos of the 1960s sprang back to life in the 1980s as the Mantula. The biggest change was the adoption of a gutsy Rover V8 engine, which increased power and at the same time reduced overall weight. Later there was a convertible Spyder version.

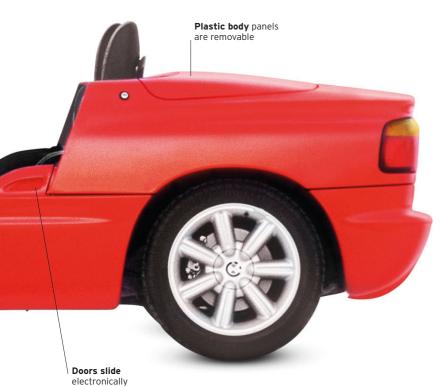

√ Toyota MR2 1984

Origin Japan

Engine 1,587 cc, straight-four
Top speed 120 mph (193 km/h)

The MR2 may not have been the first affordable mid-motor sports car, but it was certainly the best yet. A smooth and revvy 16-valve engine, pinsharp handling, plus a decent ride and Toyota's usual reliability made the MR2 an irresistibly attractive package.

into bodywork

Tradition updated

BMW front-ends featured twin nostrils, known as "kidneys", from prewar days. For the Z1 the intakes were sunk into the plastic nose, bumper, or air dam moulding. Despite the shovel-nose shape, the headlamps were not pop-up units.

Driving environment

BMWs became well-known for the carefully considered ergonomics of their interiors, with well-placed controls. The Z1's occupants also benefited from wraparound sports seats that kept them securely located during hard cornering.

√ Mazda MX-5 1989

Origin Japan

Engine 1,597 cc, straight-four **Top speed** 114 mph (183 km/h)

Inspired by the 1960s' Lotus Elan, Mazda reintroduced the world to traditional open roadster fun with the MX-5, which was more comfortable and reliable than traditional open roadsters ever were. The car was a huge success and was known as the Miata in the US and the Eunos in Japan.

Shaped in Italy

Italian styling houses reached the zenith of their influence in the 1980s, delivering an extra touch of glamour to the premium cars of the era, from the ill-fated DeLorean penned by Giorgetto Giugiaro's Italdesign to the perennial partnership between Ferrari and Pininfarina. Zagato was back too, reviving links with Aston Martin that dated back to the 1960s. But the Italian impact on design went much further than these collaborations, as their stylish and innovative new themes were incorporated into mainstream car designs. Modern, geometric styles and small cars with taller, more spacious passenger compartments were the result.

DeLorean DMC-12 1981

Origin UK

Engine 2,849 cc, V6

European power

The DeLorean used a 2.8-litre PRV V6 engine. Originally this unit was designed as a joint venture between Peugeot, Renault, and Volvo. Almost a million of these engines were built between 1974 and 1997.

Stainless steel

⊳ Isuzu Piazza Turbo 1980

Origin Japan

Engine 1,996 cc, straight-four

Top speed 127 mph (205 km/h)

General Motors' Japanese partner engaged Giugiaro to style its new coupé. A turbo engine was added in 1984 to make it go as well as it looked, but it handled poorly until Lotus was engaged to redesign the suspension. The Piazza Turbo was supplanted by a new front-drive coupé in 1990.

Autobianchi Y10 1985

Origin Italy

Engine 999cc straight-four

Top speed 114 mph (183 km/h)

Sold as an Autobianchi in Italy and many other markets, and as a Lancia in the UK, the Y10 was small, chic, and very aerodynamically efficient for its era with a drag coefficient of just 0.31. Equipment levels were high, while Turbo and 4WD versions added interest.

⊳ Cadillac Allanté 1987

Origin USA/Italy

Engine 4,087 cc, V8

Top speed 119 mph (192 km/h)

Pininfarina designed the body and built it in Italy. The fully trimmed bodyshells were flown to the US to be united with Cadillac mechanicals. The Allanté was an upmarket convertible aimed at Mercedes' SL, but some potential buyers were put off by its front-wheel-drive layout.

behind rear seat Slim headlamps give nose a penetrating look Floorplan shared with Peugeot 605

Citroën XM 1989

Origin France

Second rear window

Engine 2,975 cc, V6

Top speed 143 mph (230 km/h)

The Bertone design was derived from Gandini's Citroën BX concept, with a practical hatchback and long nose. V6 engines were available to ensure the XM had better performance than the old CX, and the hydropneumatic suspension now had sophisticated electronic control.

Great Marques The Aston Martin Story

Founded in a London garage in 1913 by Robert Bamford and Lionel Martin, the sports car adopted part of the name of the famed motoring venue, the Aston Hill Climb, to reinforce its sporting character. Reborn after World War II, Aston Martins became synonymous with high-performance, style and racing credentials.

AFTER THE PROTOTYPE

had been thoroughly tested, including an effortless run on the Aston Clinton hillclimb course, it was registered for road use in 1915. But another seven years would pass before a production car went on sale, long after Robert Bamford had departed the enterprise. The first Aston Martin featured a responsive, 1.5-litre, four-cylinder engine and, although manufacture was laborious, it quickly gained a reputation as a high-quality sports car.

Aston Martins were well suited to the Le Mans 24-hour endurance race, making their debut at the course in 1928. Despite a change of ownership in 1926, a move to Feltham, Middlesex, and an all-new car created by the Bertelli brothers, fans of the marque were already enormously loyal.

After World War II, the firm was bought by industrialist David Brown, and merged with luxury car company Lagonda. The subsequent Aston Martin DB2 featured Aston's capable chassis combined with Lagonda's superb, 2.6-litre, six-cylinder engine. Even the rough-and-ready prototypes competed at Le Mans in 1949. However, the marque's future was sealed at the course in 1950, when George Abecassis and Lance Macklin were fifth overall, and won the 3-litre class; Reg Parnell and Charles Brackenbury

Aston Martin DB2/4 drophead coupé

The rare open version of the car pictured outside the Carlton Hotel in Cannes, south of France. The car could accelerate from 0-60 mph (0-96 km/h) in about 10 seconds.

finished sixth and second in class, running like trains. In 1951 DB2s finished third, fifth, seventh, 10th, and 11th – a highly impressive five finishes from five starters.

David Brown was elated, but the achievement was eclipsed in 1959 when the DBR1 team topped the World Sports Car Championship winning the 620-mile (1,000-km) race at the Nürburgring, along with the Le Mans 24 hour.

the car pictured
(1,000-km) race at the

the Le Mans 24 hour.
Following Brown's
acquisition of the Tickford coach-building
company to make Aston Martin bodies, the
hand-built cars became ever more beautifully
appointed and finished. In 1958 the company
turned to Italy, collaborating with design house

Carrozzeria Touring on production of the DB4. The Italian company's elegant, fastback styling and lightweight construction expertise helped build a car that offered an all-new, 3.7-litre, straight-six engine, with 240 bhp on tap. This gentlemen's express featured disc brakes, overdrive, and optional automatic transmission, but still had a steely edge – DB4 GTs and the lightweight GT

Zagatos made formidable racers on the track.

The car evolved into the DB5 in 1963 – sleeker, more powerful, and, from 1964, became world famous as the car of choice for Sean Connery's on-screen role as Ian Fleming's secret agent James

Aston Martin DB5

Sean Connery relaxes on set during the making of the James Bond film *Goldfinger* with the Aston Martin DB5 that shot to fame as his villain-defeating steed.

"It must be **placed high** on the list of the world's most desirable grand touring cars."

AUTOSPORT MAGAZINE ON THE ASTON MARTIN DB4GT, JANUARY 1962

Aston Martin Lagonda The Lagonda, first seen in 1976 and on sale three years later, shocked marque enthusiasts, but with strong demand from

1967 DBS preceded a brand-new V8 engine in 1969. David Brown sold the company in 1972, and it struggled during the 1970s and 80s. The

Bond. The 1965 DB6 and

Aston Martin Lagonda of 1976 was controversial with its starched, wedge-shaped profile, but it was popular in the Middle East, and the sales helped

keep the company afloat until Ford acquired a share of it in 1987. With Ford's backing,

Aston Martin launched a more affordable, six-cylinder model in 1993. The DB7 was hugely successful, with 5,000 produced up to 2001 (Aston's grand total only reached the 10,000 mark in 1984). Subsequent models, the V12-powered DB9 and DB10, were also profitable. The company gained its first ever purpose-built factory at Gaydon, Warwickshire, and in 2005 began production of the all-new V8 Vantage, a distinctive British alternative to the Porsche 911 and Ferrari

In 2007 Ford sold the company to a Kuwaitifunded consortium, and Aston Martin returned to top-level motor racing. Victories at Le Mans

> in the GT1 class in 2007 and 2008 were followed by a fourth overall place finish at the 2009 race with a new LMP1 car. That same year, the V12 Vantage GT made its racing debut at the Nürburgring 24-hour race, grabbing a class victory.

The V12 Vanguish of 2001 was the last of the old-school, upper-crust Astons. New, exclusive models included

the V12 Vantage and One-77 supercar in 2009. The company celebrated its centenary in 2013, and in 2015 announced its 800 bhp Vulcan, a rear-wheel drive, track-only, limited-edition monster with all-carbon-fibre construction and a 7-litre, V12 engine. Only 24 were made, at £2 million apiece.

CLASSICS OF THE FUTURE

One-77 In the classic car world of the future, this is going to be very hard for collectors to get hold of, as only 77 were made, Launched in 2009 each car was custom-crafted for its owner, with aluminium panels on a carbon-fibre monocoque structure. The cost per car was at least £1.1 million, but then its 700 bhp engine could pretty much guarantee a top speed of 220 mph (354 km/h). Like almost all recent Aston Martins, it was built at Gaydon, Warwickshire, in the UK.

 \triangle Aston Martin One-77 2009

Oriain UK

Engine 7,312 cc, V12

Top speed 220 mph (354 km/h)

The booming British company went all out for ultimate supercar status by creating a £1 million-plus machine only a select few would ever drive

Rapide Many supercar lovers have to face the practicalities of family life at some point, and so Aston Martin cleverly stretched the DB9 into a four-door saloon while concealing the two rear doors within the dramatic, fastback tail. The full-length, glass sunroof was an unusual touch, arching over the sumptuous interior. Assembly was first contracted out to an Austrian company before returning to the Gaydon headquarters.

Origin UK/Austria

Engine 5.935 cc. V12

Top speed 188 mph (303 km/h)

It might have four doors and be child-friendly, but it was still a sports car at heart; one powered by hydrogen completed the 2010, 24-hour race at the Nürburgring.

Rugged Off-Roaders

Most off-roaders were tough, basic trucks intended for military, agricultural, and emergency service uses, or for hardy outdoor types, but changing attitudes saw them evolve into multipurpose vehicles that had just as much appeal on the road as off it. Trucktype leaf springs were replaced by coils for a more comfortable ride, with no loss of off-road ability, and some vehicles adopted car-like monocoque construction to cut weight while also improving refinement and driving dynamics. Demand rocketed as buyers caught on to the idea of tough, practical vehicles that could cope with any situation.

\triangle Mercedes-Benz G-Wagen 1979

Origin Germany/Austria Engine 2,746 cc, straight-six Top speed 92 mph (148 km/h)

Coil-sprung live axles gave the G-Wagen a smoother ride than its rival Land Rover, and it had axle differential locks for genuine, go-anywhere ability. But a high price and basic looks limited sales until Mercedes-Benz improved these in 1991, gradually taking the G-wagen upmarket.

∇ Mitsubishi Pajero/Shogun 1982

Origin Japan Engine 2,838 cc, V6

Top speed 96 mph (154 km/h)

Designed as a recreational vehicle rather than a workhorse, the Pajero offered car-like qualities with off-road abilities. Standard equipment was generous, and there was a wide range of engine choices, including a turbo diesel. A long wheelbase was launched to appeal to families.

High roofline

⊳ Jeep Cherokee 1984

Origin USA

Engine 2,836 cc, V6

Top speed 96 mph (154 km/h)

The XJ-series Cherokee was the first Jeep to have its chassis built into a monocoque, weldedsteel bodyshell and was a much more civilized car to drive on the road than its predecessors. As a result, the jeep stole sales away from the conventional estate cars available at the time.

Great Designers Robert Opron

The name Robert Opron may not be widely known, even among car enthusiasts, but the extraordinary sweep of his achievements is still greatly admired by those who appreciate the craft of styling. A colourful man with a fondness for brash bow ties, his remarkable designs for Simca, Citroën, and Alfa Romeo are all often voted some of the most beautiful of all time.

Career highlights

- ▶ 1958 Robert Opron's first job with Simca is to design a car of pure fantasy called the Fulgur
- ▶ 1964 Opron takes over the job of design chief at Citroën
- ▶ 1970 In a stellar year, Opron produces his two most respected masterpieces at Citroën: the GS and SM

△ RENAULT FUEGO 1980

In a fairly humdrum period for Renault cars, Opron's sleek and glassy Fuego four-seater coupe re-lit the flame of a creative approach.

- ▶ 1975 Opron's widely-lauded Citroën CX wins the European Car of the Year award. Opron himself moves on to work at Renault
- ▶ 1980 The new Fuego is launched; it is seen as the best design Opron produced at Renault
- ▶ 1989 The launch of the extraordinary Alfa Romeo SZ causes widespread controversy
- ▶ 1991 After his retirement from Fiat, Opron continues to design cars on a freelance basis
- ▶ 1998 Opron is one of 25 nominees for Car Designer of the Century

ROBERT OPRON WAS

always an artist at heart. Born in 1932, and brought up in French colonial Africa, he studied architecture, painting, and sculpture in Paris. On graduation, he dreamt of a career in aviation, and even designed his own plane, but he joined the car industry instead. In 1957 Opron secured a position

at the French car manufacturer Simca, joining the company's design centre, which was then run by an Italian count called Mario Revelli de Beaumont.

Opron immediately made an impact with one of the most extraordinary dream cars of the 1950s: the Simca Fulgur. A cartoon-like vehicle with a domed roof and jet-age aesthetic, the 1958 show car was sponsored by a children's magazine as a vision of what people might be driving in the year 2000. Opron imagined a glass-cabined car that, with its use of atomic power and a gyroscopic balancing system, may have overestimated the rate of technological progress, but did correctly predict innovations such as radar guidance. Opron's design predated satellite navigation by decades.

A HOME AT CITROËN

In 1961 Opron found himself redundant, as Simca began to be subsumed by Chrysler. He decided to migrate to Citroën, where he was interviewed

Simca Fulgar, 1958

Conceived as a vision into the future, predicting cars of the year 2000, the Simca Fulgur is an exemplar of 1950s' bubble-top styling. It never made it into production, sadly.

by its celebrated design chief, Flaminio Bertoni - the Italian-born creator of Citroën's iconic Traction Avant and DS models. At the interview, Bertoni threw Opron's design portfolio on the floor and declared his work "worthless". Opron felt insulted, said so in forceful terms, and Bertoni responded: "You interest me." He got the job.

In 1964, Bertoni's sudden death left Opron holding the French company's design reins. At Citroën, Opron designed the top-selling Ami estate and, much more significantly, the technologically advanced GS. The super-streamlined GS was an aesthetic triumph and when it launched in 1970, it was unlike any other family car of the time. Opron knew the car had to be aerodynamic to make up for its small engine, and when he

"The dolphin, the leopard, the swift, they each move at a speed consistent with their environment."

ROBERT OPRON

FRONT LIGHTS, CITROËN SM 1970

ALFA ROMEO SZ 1989-91

finished his design the GS gave a better performance with its 1,015 cc engine than most of its larger-engined rivals. It perfectly filled the gap in Citroën's stable between the economical 2CV and the more luxurious DS saloon.

However, Opron's masterpiece was undoubtedly the Citroën SM. Bold and iconoclastic, it was a defiantly French design. It regularly appears in lists of the most significant car designs of the 20th century, and was regarded by many as the best car in the world in the early 1970s, with its enviable combination of haute-couture luxury, Maserati V6 power, and radical design flair. It was, however, a commercial flop: ultimately, a mere 12,920 were made between 1970 and 1975.

A MOVE TO FREELANCE

A much rosier fate awaited the sublime Citroën CX. Despite having the unenviable role of replacing the achingly beautiful and long-lived DS, it met with instant acclaim when it was launched in 1974. Its avant-garde looks and advanced technology (deriving from the SM) promptly won it the European Car of the Year award when it was launched.

Peugeot assumed control of Citroën in 1976, hastening Opron's departure for rival Renault, where he took over the styling department. Renault was a very different, more bureaucratic, kind of employer, and perhaps as a result Opron's time at Renault was characterized

Reviewing the GS

In his trademark bowtie, Robert Opron looks over his design for the Citroën GS at the company's Bureau des Études. Following its launch, the car proved an instant success for Citroën.

Citröen CX, 1982

The distinctive, fastback shape of the Citroën CX made it another triumph of aerodynamism. It is considered by enthusiasts to be the final "true" Citroën, before the company was taken over by Peugeot.

by a number or lacklustre efforts, the best of these being the Fuego with its dramatically curvaceous rear hatch. The anonymous R9, R11, and R25 are all better off consigned to history.

He left for Fiat in 1986, where the Italian company put him in charge of "advanced studies". His best design in this period was a hastily formulated project for Fiat's latest acquisition, Alfa Romeo. This was to be a fresh flagship car to boost Alfa's flagging reputation. Project ES30

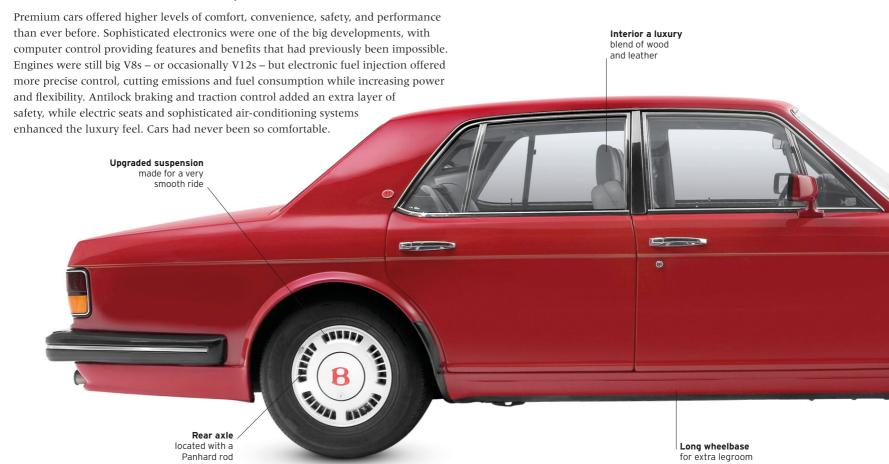

(Experimental Sportscar 3.0-litres) took just 19 months to develop from first draft to final

unveiling at the 1989 Geneva Motor Show. When the covers came off, the gasps were audible: the car that lay underneath utterly polarized opinion. With its flaring body, odd double trio of headlights, and aggressive ridges, the Italian press dubbed it "Il Mostro"

- the Monster - but it provoked enough of a reaction at trade shows for Alfa Romeo to put it into production as the SZ.

Opron retired from Fiat in 1991, but continued to design on a freelance basis, including such surprising designs as the Ligier Dué city car. He is still treated as a celebrity when he attends Citroën events today; there is evidence enough to suggest that he should be viewed as such in the wider world, too.

Absolute Luxury

□ Cadillac Fleetwood Brougham 1980

Origin USA

Engine 6,037 cc, V8

Top speed 104 mph (167 km/h)

The top of Cadillac's prestige saloon car line remained its most conventional car. Although smaller than before, its dimensions were still ample. The V8 was Cadillac's biggest, there was a live rear axle, and luxury trim and power steering came as standard.

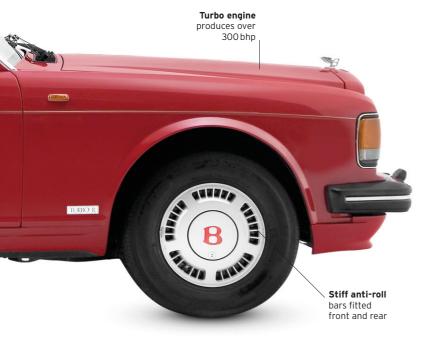

\triangledown Bentley Turbo R 1985

Origin UK

Engine 6,750 cc, V8

Top speed 143 mph (230 km/h)

Rolls-Royce transformed Bentley's flagging sales by making the cars more distinctive, and the introduction of a turbocharged engine restored the marque's sporting credentials. The R added reworked suspension so the road manners matched the straight-line urge. It was ultimate luxury with a big kick.

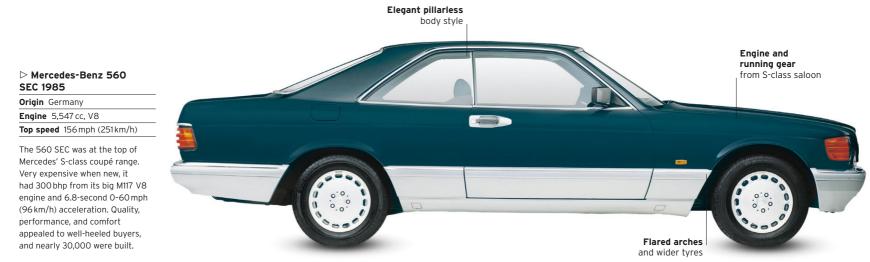

Traditional craftsmanship

The Turbo R may have adopted newfangled engine technology but inside it was as traditional as ever. Acres of soft leather covered the seats and door trims, while the dashboard was built from fine veneered wood by skilled craftsmen.

Turbo technology

Turbocharging was all the rage in the 1980s, as it offered an efficient route to greater power while retaining reasonable economy when cruising.
Underneath was the familiar Rolls-Royce/Bentley push-rod V8, which dated back to 1959.

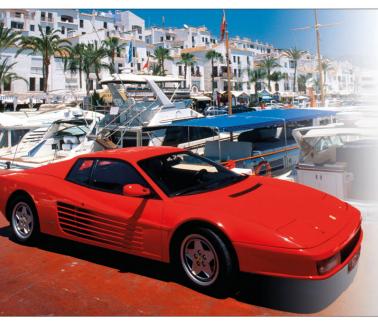

√ Jaguar XJS 1988

Origin UK

Engine 5,343 cc, V12

Top speed 150 mph (241 km/h)

XJS began in 1975 as a coupé and later there was a cabriolet with a removable roof panel, but it took until 1988 for Jaguar to introduce a full convertible. It came with an electric hood, antilock brakes, Jaguar's silken V12 engine, and abundant style.

Ferrari Testarossa

Reviving a famous name last used in the 1950s, the 1984 Ferrari Testarossa was a Pininfarina-designed, 12-cylinder two-seater. The early "red heads" had been racing machines, but this was a pure road car - sleek, very fast, and enormously expensive. Like many Ferrari Formula 1 engines of the period, it was powered by a flat or "boxer" engine rather than a more conventional V12. It remained in production until 1996.

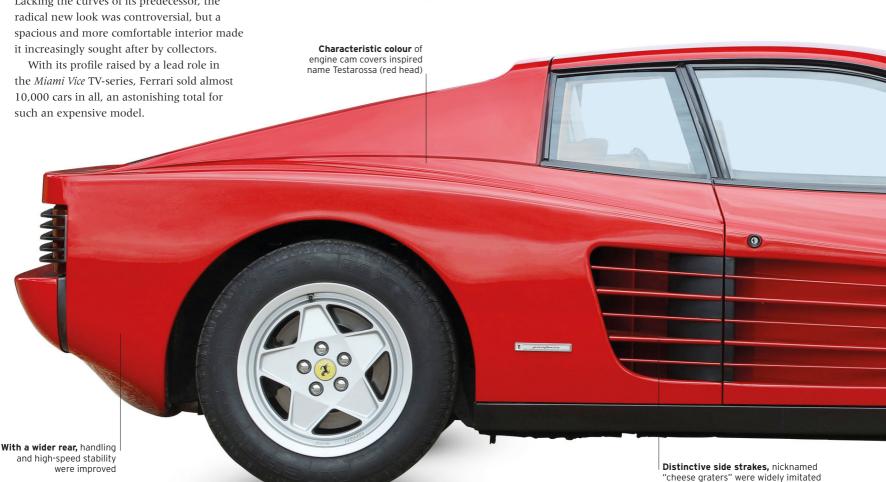

FACING RENEWED COMPETITION from

Lamborghini, Ferrari was keen to address complaints from customers about its rangetopping 512i BB. These issues included a lack of luggage space and an interior that became stiflingly hot in summer, due to the car's midmounted engine and front-mounted radiators.

Ferrari's solution was a wider and longer car, with deep intakes ahead of the rear wheels to channel cooling air into the engine. Lacking the curves of its predecessor, the radical new look was controversial, but a spacious and more comfortable interior made it increasingly sought after by collectors.

With its profile raised by a lead role in the Miami Vice TV-series, Ferrari sold almost 10,000 cars in all, an astonishing total for such an expensive model.

Testarossa badge

A legendary name in Ferrari circles, Testarossa recalls the company's 1957 World Sportscar Championshipwinning race-car which took Le Mans by storm the following year. Just 34 machines were built and survivors today command the very highest prices on the global auction market.

SPECIFICATIONS	
Model	Ferrari Testarossa, 1984-91
Assembly	Maranello, Italy
Production	7,177
Construction	Tubular steel frame with aluminium panels
Engine	4,943 cc, flat-12
Power output	390 bhp
Transmission	5-speed manual
Suspension	All-round double wishbones with coil springs
Brakes	All-round discs
Maximum speed	180 mph (290 km/h)

Styling

Pininfarina designers courted controversy by abandoning the strong family look of earlier Ferraris and designing a car much larger than its predecessor. Criticized at the time for pandering to the 1980s' taste for excess, the car is now recognized for what it is – a legitimate Ferrari classic.

ON THE ROAD

A strong seller when new, the Testarossa was slow to achieve classic status. Now, however, its position seems assured, with values climbing rapidly. Detractors said the car was too large, and that it exemplified the worst of 1980s' tastes. But on the plus side, it had a superb engine, and as supercars go, it was surprisingly practical. Also, with prices for its Berlinetta Boxer (p.210) and Daytona (p.211) predecessors now firmly established in the stratosphere, enthusiasts were increasingly willing to consider more recent cars.

Anyone taking the plunge was unlikely to be disappointed. These cars looked and felt very special indeed, and with later versions capable of almost 200 mph (322 km/h) – what was not to like?

Pop-up headlamps (fitted until 1994)
 Five-spoke alloys (the company's familiar company trademark)
 Side strakes channel air into side-mounted radiators
 Ferrari's favourite designer
 Ferrari badge proudly displayed
 Red cover for a red head
 Interior was Ferrari's most comfortable so far
 Neat dashboard with just four instruments
 Ferrari's familiar open-gate gear lever
 Red cam covers, hence Testarossa, Italian for "red head"

Supercars

Despite the legacy of energy crises and the recessions there were still plenty of buyers for the most glamorous cars, just as there had always been. Group B rally racing added extra impetus to the creation of truly spectacular performance cars, the new competition category requiring just 200 road-going examples to be built to qualify a car for motor sport. But following a string of high-profile crashes the class was scrapped, and suddenly these supercars were being bought by collectors in road-going trim, rather than stripped out for a life of competition on the race track.

Contoured for aerodynamics

The F40's retractable headlights maintained optimum airflow efficiency by sinking back down into the car's streamlined bonnet when not in use. The body was made up of 11 panels, variously made from materials such as Kevlar, Nomex, and carbon fibre, and all coated in lightweight red paint.

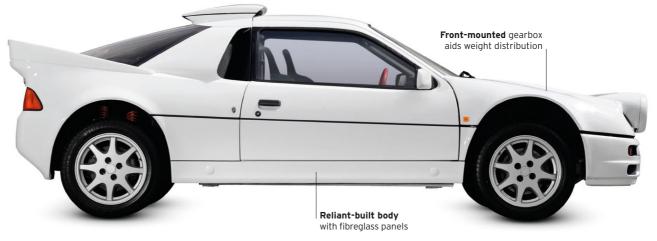

Origin UK

Engine 1,778 cc, straight-four

Top speed 118 mph (190 km/h)

The RS200 was built from scratch for rallying, the 200 in its name reflecting the number of road cars that had to be made to homologate the car in Group B. Styled by Ghia, built by Reliant, with turbo power from Cosworth, it was an instant classic.

Twin turbos and Marelli-Weber fuel injection Racing-type transmission betrays motor-sport roots Steel-tube chassis with composite body panels

Origin Italy

Engine 2,855 cc, V8

Top speed 189 mph (304 km/h)

Intended as Ferrari's Group B competition car, this limited-edition, high-performance model was consigned to the road when the class was abolished. Based on the 308 GTB, the 288's slightly smaller engine suited competition rules, but its twin turbos took power up to 400 bhp.

▽ Ferrari F40 1987

Origin Italy

Engine 2,936 cc, V8

Top speed 201mph (323 km/h)

The F40 was the world's fastest production car from 1987 to 1989, and an aggressive response to those who said Ferraris were getting too soft. With twin turbos, 478 bhp, and lightweight composite bodywork, it was created to mark Ferrari's 40th birthday as a car-maker.

Keeping its cool

The F4O was covered with air intakes to ventilate its mechanical systems; the two on the nose are called NACA ducts, named after NASA's predecessor - the National Advisory Committee for Aeronautics - and shaped for aerodynamic efficiency.

FRONT VIEW

Maximum downforce

The towering, full-width, aerofoil wing at the back directed airflow to push the tail of the F4O down onto the road or track surface, aiding roadholding. The four round tail lights were typically Ferrari.

⊳ Porsche 959 1986

Origin Germany

Engine 2,994 cc, flat-six

Top speed 190 mph (306 km/h)

Porsche built 200 of these awesome cars to qualify the 959 for Group B rallying. A technical tour de force, it had computer-controlled fourwheel drive, electronic ride height adjustment, and 444 bhp from a twin-turbo engine that was rear-mounted just like a 911.

Aston Martin V8 Vantage Zagato 1986

Origin UK/Italy

Engine 5,340 cc, V8

Top speed 185 mph (298 km/h)

A revival of the Aston/Zagato partnership begun in the 1960s with the DB4GT Zagato, the Vantage was brutally fast, and expensive. Just 50 coupés were built, on a shortened V8 Vantage platform. They were followed by 25 Zagato Volante convertibles, most with the lower-tune V8 engine.

Glossary

2+2

Shorthand for cabin accommodation consisting of two full-size front seats and two small rear seats. The rear seats are usually only suitable for young children or adults on short journeys only.

4x4

Shorthand for four-by-four, or four-wheel drive (4WD). A four-wheel drive vehicle has power transmitted to every road wheel.

ABS

(Anti-lock Braking System)

A braking system that stops the wheels from locking during braking, so that the car can be steered away from danger in an emergency.

air dam

A metal or plastic "lip" at the lowest point of the front of a car, which improves aerodynamics by blocking the flow of air under the chassis, reducing drag and lift.

air filter

A felt or paper component that cleans air of particles before it enters the engine.

air-cooled engine

An engine that circulates air externally, usually assisted by a fan, to cool hot components. Internal water-cooling is favoured in modern engines.

air suspension

A high-pressure suspension system that uses inert gas or pumped air to keep the car stable on rough roads or fast corners.

alternator

A small generator that converts the engine's mechanical energy into an electrical current. The electricity it produces charges the battery and powers circuits for lights, electric windows, and radios.

anti-surge baffle

A plate that stops liquids from shifting position inside a reservoir, particularly an oil sump, as a result of the car's movements.

automatic

A clutchless transmission that will automatically select the appropriate gear for the driver.

backbone chassis

A longitudinal, central structure supporting a car's body, drivetrain, and suspension.

BDA engine (Belt-Drive A-type)

A Ford-based, competition car engine designed by Cosworth.

beam front axle

A single suspension beam with a wheel on either end, attached to the car's frame by coil or leaf springs.

bearing

A component providing a support between the fixed and moving parts of a machine.

Bertone

An Italian coach-builder and design consultancy, operating between 1921 and 2014.

bhp (brake horsepower)

Horsepower originally gave a measure of the energy output of steam engines in terms of the equivalent amount of pulling power provided by a draft horse. In cars, "gross" bhp is a measurement of the power output of an engine. "Net" bhp is an engine's output after power has been sapped by ancillary equipment, such as the alternator. Bhp is measured by applying a special brake to the crankshaft.

big end bearing

The larger, lower bearing of the connecting rod that links the pistons to an engine's crankshaft.

block

See cylinder block

blown (engine)

A general term for an engine that has its power boosted by a turbocharger or a supercharger.

bonnet

A hinged covering for a car engine.

bore

The usually cylindrical hole within which an engine's piston moves. Also refers to this cavity's diameter.

Brooklands

The world's first purpose-built race circuit, near Weybridge, Surrey, UK, in use from 1909 to 1939.

bubble-top

A notably rounded car roof that is made of glass, Perspex, or metal.

butterfly valve

A disc that pivots along its diameter within a duct, forming a valve that can be opened and closed in order to regulate the flow of air into an engine component, such as a carburettor.

cabriolet

A two-door model, although usually not a sports car, with a fabric-covered, removable, or folding roof.

camshaft

A rotating shaft with cam lobes that open and close the engine's inlet and exhaust valves. It can operate the valves indirectly by pushrod (usually in an overhead-valve engine) or directly (in an overhead-camshaft engine). Two camshafts per cylinder are used in double-overhead-camshaft engines – one for the inlet valves; one for the exhaust valves.

carburettor

A device on older engines in which fuel and air are combined, producing a combustible mixture, which is then ignited in the cylinder.

catalytic converter

A device fitted to the exhaust of cars running on unleaded petrol. It uses a chemical catalyst to stimulate reactions that convert harmful gases into harmless ones.

CC

Short for cubic centimetres, the universal measurement of the volume of an engine's cylinders.

chassis

A load-bearing frame on wheels, which, in all early cars, carried the mechanical parts, and to which the body was attached. Most of today's models are of monocoque design, and so have no specific chassis unit, but the word survives to denote the drivetrain package.

choke

A carburettor valve that temporarily restricts air flow so that the fuel-air mixture is petrol-rich and easier to ignite when the engine is cold.

clap-hand windscreen wipers

Wipers that fold together in the centre of the windscreen, and sweep towards the outside edges of the windscreen when they are activated.

classic

A car built after 1 January 1940, and more than 25 years old.

close-coupled

A body style of a two-door compact car that places the rear two seats within the wheelbase.

clutch

A device that disconnects the engine from the transmission so that a different gear can be selected.

coachwork

A car's painted body – traditionally made by a coach-builder.

coefficient of drag

The result of a complex scientific equation, which proves how aerodynamic a car is, usually expressed as a figure to two decimal places. Drag means the resistance of a body to airflow and low drag means better penetration, less friction, and therefore more efficiency, although sometimes poor dynamic stability. The term is routinely shortened to Cd. The 1970 Citroën SM was considered to have an exceptionally low coefficient of drag figure of 0.24 better than most modern cars now at 0.30-0.25.

column gear-change

A gear-selector lever mounted on the steering column instead of the floor. It is no longer found on modern cars.

combustion chamber

The space at the top of an engine's cylinder into which the fuel-air mixture is compressed by the piston when at its high point, and the place where the spark plug is located to initiate combustion.

compression ratio

The ratio between the volume of one cylinder and the combustion chamber when the piston is at the bottom of its stroke, and the volume of the combustion chamber alone when the piston is at the top of its stroke.

compression ring See **piston ring**

compressor

A device that increases the pressure of a gas by reducing its volume by compression. Used in turbochargers and superchargers to increase the performance of the engine.

connecting rod

A mechanism that connects an engine's piston to the crankshaft – often shortened to con-rod.

copper-brazed engine

An engine found in Crosley cars and constructed from metal sheets, instead of castings, held together by copper alloy soldering techniques.

Cosworth-tuned

An engine modified by Cosworth, a UK-based designer and builder of engines for road and race cars.

coupé

From the French verb *couper* ("to cut"), this originally referred to a two-door closed car with a lower roof-line. Coupés today tend to have a roof-line tapering at the rear.

courtesy light

A small light activated on opening a car door, lighting the car interior, door sill, or ground beneath the car.

crankcase

The lower part of the cylinder block that houses the crankshaft.

crank handle

A hand tool inserted into the front of an engine and used to turn it so that the internal combustion process is activated. Also known in the UK as a starting handle.

crank pulley

The main pulley at the end of an engine's crankshaft. It is used to drive ancillary devices, such as the alternator and the water pump.

crankshaft

The main engine shaft that converts the reciprocating (up and down) motion of the pistons into a rotary movement to turn the wheels.

crumple zones

The front and rear sections of a car designed to deform or collapse on severe impact; the energy absorbed prevents damage to the passenger compartment and fuel tank.

cu in (cubic inches)

A former volumetric measurement of cylinder capacity – and therefore engine size – for engines in the US; replaced by the litre from the 1970s.

cylinder

The cylindrical bore in which an engine's pistons move up and down.

cylinder block

The body, usually of cast metal, into which cylinders are bored

to carry the pistons in an internal combustion engine, and to which the cylinder head or heads attach.

cylinder head

The upper part of an engine, attached to the top of the cylinder block. It contains the spark plugs that ignite the fuel in the cylinders and usually the valves.

dead axle

An axle that carries a wheel, allowing it to spin freely, but through which no power is transmitted.

differential

A gear-set in the drive system of a car that allows an outer wheel to rotate faster than an inner wheel, necessary when turning a corner.

DIN figures

A measure of engine power output defined by Germany's Deutsches Institut für Normung.

direct injectionSee fuel injection

disc brakes

A braking system in which each wheel hub contains a disc that rotates with the wheel and is gripped by brake pads in order to slow the vehicle.

distributor

A device that routes high voltage from the ignition coil to the spark plugs in the correct firing order.

dohc (double-overhead camshaft)

See camshaft

downdraught carburettor

A carburettor in which fuel is fed into a downward current of air.

drag coefficientSee **coefficient of drag**

drivebelt

A belt that drives various devices in, or attached to, a car's engine, including the alternator.

driveshaft

A revolving shaft that takes power from the engine to the wheels.

drivetrain

The mechanical assemblies – engine, transmission, driveshafts, and differentials – that generate and harness power in a car. Today these are collectively know as the "chassis", and can be transplanted into several different models to save

on development costs. Sometimes "drivetrain" can refer to the engine and the transmission only.

drophead

A body style featuring a convertible top that folds flat.

drum brake

A braking system, supplanted by disc brakes, in which braking shoes are pressed against the inner surface of a drum, attached to the car's wheel.

dual-circuit brakes

A braking system with two separate hydraulic circuits to retain braking capability if one should fail.

dynamo

An engine-driven generator of electric power in earlier cars. It has now largely been replaced by the alternator.

entry-level

A car model that is the lowest-priced or with the lowest spec in a range.

estate

A square-backed car that is adapted to carry cargo, with a load bay accessed by a fifth door or tailgate, or else twin-hinged doors. The term was originally coined for a utility vehicle used for running errands on large country estates. In the US, it is called a station wagon.

exhaust manifold

A piping system that carries waste exhaust gases from the cylinders to the exhaust pipe.

exhaust port

A passageway in the cylinder head leading from the exhaust valve(s) to the exhaust manifold.

exhaust valve

A valve in the cylinder head that opens at the beginning of the exhaust stroke, allowing the piston to push the exhaust gases out of the cylinder.

eyebrow headlights

A stylistic feature, first seen on the Lamborghini Miura, that gives the impressions of eyebrows or eyelashes framing the headlights.

factory team

A racing team funded by a car manufacturer.

fairing

Any cover designed to make parts that stand proud (of an engine, for example) more aerodynamic.

fastback

A rear roof-line profile that tapers to the end of the car's tail.

FirePower engine

A sub-brand name for Chrysler's first generation of V8 engines with a hemispherical combustion chamber, made between 1951 and 1955.

flat-twin, flat-four, flat-six, flat-twelve

Any engine that has its cylinders and pistons positioned horizontally in two opposed banks. These are sometimes called "boxer" engines because the pistons in opposing pairs of cylinders move towards and away from each other, as if trading punches.

floorpan

A shallow, pressed-metal tray that forms the underside of the car and carries suspension and other drivetrain elements. Clever design often allows the same floorpan to be shared by different models, reducing production costs.

fluid flywheel

A now-redundant transmission device that enabled the driver to change between gears without using a clutch.

flywheel

A heavy circular plate attached to the crankshaft that stores the rotational energy produced by the engine's torque impulses. Releasing this energy between impulses, smooths and evens out the engine's operation.

Formula 1

More formally known as the FIA (Federation Internationale de l'Automobile) Formula One World Championship, this is the premier world series of single-seater motor races. It was inaugurated in 1950.

four-stroke engine

This is the predominant type of car engine today. There are four stages in the power cycle, which occupies two crankshaft rotations: intake, compression, combustion, and exhaust. Each of these is governed by the upwards or downwards motion or "strokes" of the piston.

four-wheel drive (4WD) See 4x4

front-wheel drive

Power is transmitted to the front wheels of a vehicle only.

This lightens the car, which needs no transmission shafts or trunking to its rear wheels.

fuel injection

A fuel supply system, universal to new cars, which dispenses with a carburettor. Fuel is pumped from the petrol tank and sprayed by injectors straight into the engine's inlet ports, where it mixes with air before being burned in the cylinder. In diesel and direct-injection petrol engines, fuel is injected straight into the cylinder, rather than into the inlet port.

Futuramic

The term used by General Motors' Oldsmobile division for the styling of its 1948–50 car range.

gas turbine

A jet-type, rotary engine drawing its energy from the continuous burning of a flow of fuel-air mixture, which drives a turbine. Used experimentally in cars, it is too slow-reacting to directly replace the reciprocating engine currently used.

gate gear-change

An abbreviation of "open-gate gear-change" – a style of gearbox in which the slots into which the gear selector lever must be pushed are visible. It is usually found in sports or racing cars; other types of car tend to cover it up with a rubber or stitched-leather gaiter.

gear

A toothed or cogged machine part that meshes and rotates with other such parts to transmit power and torque.

gearbox

The metal case in which the gears and gear-changing mechanism are housed within a car. It is usually joined to the end or the bottom of the engine.

Giugiaro

This can refer to the Italian car stylist Giorgio (often alternatively known as Giorgetto) Giugiaro, or to the design consultancy he started in 1968, which is more formally called Italdesign-Giugiaro. The consultancy was acquired by Volkswagen in 2010.

grand routier

An informal name, more common in English use than French, which translates as "grand road traveller". It is often applied to elegant and fast European touring cars.

GT

From the Italian gran turismo, meaning "grand touring", these initials refer to high-performance closed cars.

gullwing doors

Doors that open upwards. They are a key feature of the Mercedes-Benz 300SL and the DeLorean DMC-12.

hardtop

A sports, or sporty, car with a rigid roof that is either fixed or removable. A car with a fabric roof is called a soft-top.

hatchback

The tailgate, sometimes called the third or fifth door, on any non-estate car with a sloped, instead of vertical, tail. It is also a style of car pioneered in five-door form by the Renault 16 of 1965, and in three-door form by the Renault 5 of 1972.

head

See cylinder head

heat shield

Rigid or flexible layers of heatresistant material that protect a car's components or bodywork from excessive engine- or exhaustgenerated heat.

hood

The folding, canvas-covered top of any convertible car. It is also the US word for "bonnet".

homologation

A rigorous testing programme that new cars must undergo to ensure they meet construction and usage rules in a territory; only then can they be legally driven on the road. The term is also applied to the rules governing individual motor sport categories. An "homologation special" is, in general, a roadgoing version of a racing car; a minimum number of these must be constructed for it to qualify as a production model.

horizontally opposed layout

The full technical term for an engine whose cylinders are mounted flat on either side of the crankshaft.

hot hatch

The British nickname for a highperformance version of a compact three-door (sometimes five-door) car, exemplified by the Renault 5 Alpine and Volkswagen Golf GTi of 1976.

hot rod

Short for "hot roadster", a US term that originated in the 1930s to describe any standard car whose engine had been modified for higher performance. After World War II hot rods were modified production cars used in straightline speed trials.

hp (horsepower) See bhp (brake horsepower)

Hydramatic transmission

General Motors' own brand of automatic transmission.

hydraulic brakes

A braking system that uses fluid to transfer the action of the brake pedal being depressed, via a master cylinder, to the brake assembly.

hydraulic damper

A damper is the proper name for a shock absorber, which dissipates the energy of a car's suspension movement and converts it hydraulically, via internal oil, into quickly dissipated heat.

Hydrolastic suspension

A brand of suspension system featuring fluid-filled rubber displacement units. It was used in cars made by the British Motor Corporation in the 1960s.

Hydropneumatic

Citroën's own brand name for its self-levelling suspension system. Hydraulic fluid from an enginedriven pressure pump transmits the movement of the suspension arms to metal springs containing pressurized nitrogen, which absorb bumps and maintains constant ride height. The system has pre-set ride heights to cope with differing driving conditions. Complex and eccentric, it never became popular.

idle-speed positioner

A device that optimizes the rate at which the engine runs at idle, when the throttle is closed, to maximize fuel efficiency.

ignition coil

An ignition system component that converts the car battery's 12-volt power into the thousands of volts required to ignite the spark plugs.

independent suspension

A suspension system that allows every wheel to move up and down independently of the others. Its advantages are better handling and a more comfortable ride.

Indianapolis 500

A US motor race for single-seater cars, staged annually since 1911 at the Indianapolis Motor Speedway.

induction system

The apparatus through which air passes as it enters the engine.

inlet plenum chamber

An air chamber between an engine's throttle body and inlet manifold that beneficially affects the operation of the induction system.

inlet port

The route within a cylinder head through which the fuel-air mixture passes to the inlet valve.

inlet trumpet

A trumpet-shaped engine air intake designed to exploit the effects of wave motion to force more air into the cylinders.

inlet valve

The valve through which fuel is drawn into the engine cylinder.

in-line engine

An engine that has its cylinders arranged in a straight line or row; it has been the predominant automotive layout in small cars for decades.

intercooler

A radiator cooling the compressed air expelled from a turbocharger or supercharger before it enters the engine. This increases power and enhances reliability.

IRS (Independent Rear Suspension)

A suspension system in which the rear two wheels are free to move up and down independently of each other.

kei car

A Japanese taxation class for very small cars, which, must be no more than 3.4 m (11.15 ft) in length and have an engine of no more than 660 cc to qualify.

knock-off wire wheels

These are wheels consisting of wire spokes between hub and rim that fit on to splined hubs, and are secured in place with, what is effectively, a large nut. Traditional British sports cars generally had wings on these nuts so that it can be undone (or "knocked off") using a rubber mallet; this system was for years illegal in Germany. Italian cars often had a plain nut which needed a special tool to undo.

laminated windscreen

Fitted to all new cars as a legal requirement for many years, a laminated windscreen consists of two layers of glass with a layer of plastic in between. The screen will not craze all over if hit by a stone, and won't splinter if it breaks.

landaulet-body style

A type of coachwork featuring a folding fabric top above the heads of the rear-seat passengers while the front of the car remained closed in with a metal roof. The style, which is now old-fashioned, has often been seen on cars used for formal processions in which royalty or political leaders wish to be seen by their subjects or citizens.

leaf spring

Also known as a "cart spring", this is a basic means of suspension, noted for its durability, not for its ride quality. The spring comprises of overlaid arcs (or leaves) of steel that are fixed to the underside of the car, forming a shock-absorbing cushion on which the car's axle presses. The heavier the car, the more leaves must be added to the spring to take the weight.

Le Mans 24-Hours

A 24-hour endurance motor race, staged annually at Le Mans, France, since 1923. It uses a circuit consisting of public roads cordoned off for the event.

limited-slip differential

A differential that counteracts the tendency of wheelspin if one driven wheel hits ice or another slippery surface.

limousine

A large, luxurious saloon car, often with a long or extended wheelbase, giving an emphasis on rear-seat comfort. Limousines are sometimes fitted with glass divisions between driver and rear passengers.

live axle

A beam-type axle that contains the shafts that drive the wheels on each end.

MacPherson strut

Named after its inventor, Ford Engineer Earl MacPherson, this is a suspension upright that consists of a hydraulic damper with a coaxial coil spring. Most frequently used for front suspension, it has the advantage of causing little intrusion into the engine bay.

Mille Miglia

A 1,000-mile (1,609-km) road race around Italy on public roads, held 24 times between 1927 and 1957. In 1977 the name was revived for an annual parade of historic cars.

monobloc

An engine design in which the cylinders are cast together as a single unit. This improves the mechanical rigidity of the engine and the reliability of the sealing.

monocoque

A car structure, now almost universal, in which the car body bears all the structural loads. It is, effectively, the chassis and the body combined in one strong unit.

MPV

Shorthand for Multi-Purpose Vehicle or Multi-Passenger Vehicle. The term applies to tall, spacious cars that can carry at least five passengers, and often as many as nine, or versatile combinations of people and cargo as a people carrier.

muscle car

A US standard production car, usually with two doors, featuring a large-capacity, high-performance engine. The first muscle car was the Pontiac GTO in 1964.

NACA duct

America's National Advisory Committee for Aeronautics created this distinctively shaped air intake, which can be used to ventilate internal components such as brakes while causing minimal disturbance to external aerodynamics.

NASCAR

The National Association for Stock Car Auto Racing – a US organization that oversees motor racing series and events.

ohc (overhead-camshaft) See camshaft

ohv (overhead valve) See overhead-valve engine

overdrive

A gear ratio for fast cruising that causes the gearbox output shaft to turn faster than the input shaft. This lowers the engine revs for a given vehicle speed, which cuts fuel consumption, but also torque, which restricts overtaking power.

overhead-camshaft See camshaft

overhead-valve engine

An engine in which the inlet and exhaust valves are contained within the cylinder head, as opposed to being beside the cylinder, as they are in a side-valve engine.

overrider

A metal or rubber-faced metal upright fitted to a bumper to protect against the bumpers of other cars in a low-speed collision.

over-square engine

An engine in which the cylinder bore measurement is greater than the stroke.

people carrier

A popular term to describe an MPV, particularly one that has at least seven seats.

Pinin Farina/Pininfarina

An Italian coach-builder and design consultancy founded in 1930 as Pinin Farina by Battista "Pinin" Farina. The company adopted the Pininfarina title in 1961.

piston

The component that moves up and down inside the engine cylinder and which, on the combustion stroke, transfers force from the expanding gas to the crankshaft via a connecting rod.

piston ring

An open-ended ring that fits into a groove in the outer surface of an engine's piston, sealing the combustion chamber. Piston rings also act to cool the piston by transferring heat to the cylinder wall, and regulate oil consumption.

platform

The concealed, but elemental and expensive, basic structure of a modern car. It is the task of car designers to achieve maximum aesthetic diversity from a single platform.

pony car

A genre of car informally named after the Ford Mustang, which was one of the first compact sporty coupés, aimed at the US "baby boomers" of the 1960s, and featured the emblem of a galloping horse. It could be ordered with several highperformance engine options.

powertrain See **drivetrain**

propshaft

Shorthand for "propeller-shaft" – a long shaft that conveys engine

torque to the rear axle of a rearwheel drive or four-wheel drive car.

pushrod engine

An engine in which the valves are not operated directly via the camshaft but via intermediate rods. This allows the valves and camshaft to be widely separated.

O-car

A car with a performance that belies its mundane appearance. The name derives from the heavily armoured but innocuous-looking Q-ships used by Britain's Royal Navy in World War I. A Q-car is often referred to as a "wolf in a sheep's clothing".

rack-and-pinion steering

A rack and pinion consists of two gears that together convert rotational motion into linear motion. It is the favoured system for car steering because it provides feedback to the driver about the behaviour of the wheels, and gives accurate steering.

radiator

A heat-exchanger used to cool liquids by presenting a large surface area to a flow of air.

razor-edge styling

A car styling trend towards sharpedged lines that emerged in the UK coach-building industry in the late 1930s. It was a reaction to the prevailing preference for rounded, streamlined forms, and instead was used by designers to convey dignity and formality.

rear-wheel drive

Power transmitted to the two rear wheels of a vehicle only.

reciprocating engine

Also known as a piston engine, which converts the up and down (or "reciprocating") action of the pistons to the rotary motion needed by the wheels.

redline

The maximum speed at which an engine is designed to operate without incurring damage. It is usually indicated by a red line on the rev counter dial.

rev

Short for revolutions-per-minute, a measure of engine speed.

roadster

A term that originally described an open car with a single seat to accommodate two or three abreast. but which now applies to any kind of two-seater open sports car.

rocker arm

A pivoted lever, one end of which is raised and lowered by the camshaft, either directly or via a pushrod, while the other end acts on the stem of the engine valve.

rocker panel

The section of a car's bodywork between the front and rear wheelarches and below the side doors; called the "sill" in the UK.

rolling chassis

The frame of an older, separatechassis car, with all drivetrain components fitted.

rollover bar

A strong metal hoop incorporated into the structure of a car with a folding roof. It is designed to reduce body roll, and protect the heads and upper torsos of driver and passengers should the vehicle overturn in an accident.

Rostyle wheels

A brand of styled, pressed metal wheels manufactured by British company Rubery Owen (hence RO-style) made under licence from the Motor Wheel Corporation of the USA. They resemble cast aluminium or magnesium wheels found on racing and sports cars, but were heavier and much cheaper to make.

rotary engine

Any type of power unit that dispenses with the reciprocal motion of pistons, producing rotary motion directly. The only type ever fitted to production cars was one designed by Dr. Felix Wankel, and the most recent car to feature one was the Mazda RX-8, which appeared in 2001.

running board

A fixed step or ledge below the doors on early cars that aided entry and exit in the days when seating positions were high, as in horsedrawn carriages. Running boards began to disappear in the 1930s as cars were built with lower ground clearance.

running gear

The wheels, suspension, steering, and drivetrain of a car.

saloon

Any type of car that has a fixed metal roof. The equivalent term in the US is "sedan".

scavenge oil pump

In a dry sump engine this additional pump evacuates oil that collects at the bottom of the engine, sending it to a separate oil tank.

scuttle

The bodywork sections that form a barrier between the engine and the passenger compartments, and that support the windscreen.

sedan

See saloon

semi-elliptic springs

Another term for leaf springs.

semi-trailing suspension

An independent suspension assembly for the rear wheels of a car in which each wheel hub is linked to the chassis by a lower triangular arm that pivots at an acute angle to the vehicle centre-line.

servo assisted braking

A braking system that uses a stored vacuum (or "vacuum servo") to magnify the force the driver applies to the brake pedal.

shaft drive

Power delivered from the engine to the wheels by means of rotating drive shafts.

side-valve engine

A form of engine design in which the valves are placed at the side of the cylinder, rather than within the cylinder head. In an L-head engine the inlet and exhaust valves are placed together on one side of the cylinder; on a T-head engine they are located on opposite sides.

silencer

A chamber placed along the route of the exhaust pipe and designed to reduce exhaust noise.

six-pot

"Pot" is slang for "cylinder"; a "six-pot" engine is a six-cylinder unit.

sleeve-valve engine

An engine that has a metal sleeve placed between the piston and cylinder wall. The sleeve oscillates with the motion of the piston and has holes that align with the cylinder's inlet and exhaust ports, aiding the entry and exit of gases.

slide throttle

A type of throttle with a perforated plate that slides across the air inlet to allow more or less air to enter the engine.

sliding gear transmission

An old-fashioned manual gearbox. When in neutral, nothing inside the transmission revolves apart from the main drive gear (attached to the crankshaft) and cluster gear (attached to the wheels). To mesh the gears and apply engine power for motion, the driver presses the clutch and moves the shift handle to slide a gear along the mainshaft mounted above the cluster. The clutch is then released and the engine power transmitted to the driven wheels. This system has been superseded by constant-mesh, or "synchromesh", gears.

small-block

The smallest V8 engines from Chevrolet and Ford, first produced in the 1950s.

sohc (single overhead-camshaft)

See camshaft

solenoid switch

An electronically controlled switch, more commonly known as a relay, which allows a low-current electric circuit to control a high-current one. A car's starter motor, for example, requires a high-current circuit.

Spa 24 Hours

An annual endurance motor race held in Spa, Belgium, since 1924.

spark plug

An electrical device, screwed into the engine cylinder head of a petrol engine, that ignites the fuel in the cylinder.

spats

Metal body panels that partly conceal the wheels to give a sleek styling continuity to body lines. They are usually fitted over the back wheels, and can be detached for wheel changes.

sports car

A two-seater with a convertible top, low or rakish lines, good roadholding, and above-average speed and acceleration.

spider

A "spider-phaeton" was originally a light horse-drawn cart with two seats and large wheels. Alfa Romeo adopted the name for its two-seater sports cars in 1954, and it is now the standard name for cars of that type, particularly ones that are compact and low with a snug cockpit.

spyder

The German equivalent of a "spider", and most commonly associated with Porsche.

stovebolt

A nickname for a Chevrolet straight-six cylinder engine, coined because the fastener securing the valve cover, lifter cover, and timing cover resembles the bolt found on wood-burning stoves.

straight engine See **in-line engine**

sub-compact

A North American term that originated in the 1970s to describe domestically produced rivals to the Volkswagen Beetle, such as the Ford Pinto and the Chevrolet Vega. The latter were smaller than the Ford Falcon and the Chevrolet Corvair, which at the time were termed as "compacts" by Detroit manufacturing standards.

sub-frame

A self-contained structure, additional to the chassis, that is designed to carry specific components such as the engine or suspension.

suicide doors

A slang term for passenger doors that are hinged at the rear. Before the time when seatbelts were universally fitted, such doors could be hazardous if a passenger fell from a moving car, or if a passing vehicle clipped one as it opened, slamming it on to the driver or passenger. They were also, in early motoring times, prone to flying open when on the move and being forced back by the air stream, dragging the occupant out as they struggled to slam the door shut.

sump

An oil reservoir at the bottom of an engine. A "dry sump" is usually fitted to a racing- or sports-car engine that is likely to be subjected to high cornering, braking, and acceleration forces. In a conventional "wet sump" these forces can cause oil to surge, uncovering the oil pick-up pipe, which can result in engine damage. In a dry sump system, a scavenge pump removes oil as it falls into the sump, pumping it to a separate oil tank.

supercar

A very expensive, highperformance sports car. The first supercar is widely recognized to have been the Mercedes-Benz 300SL of 1954, but the term later described a mid-engined two-seater as exemplified by the Lamborghini Miura of 1966.

supercharger

An engine-driven compressor that forces air into the inlet system, thereby increasing the amount of fuel-air mixture entering the cylinders, and hence the torque and power.

supermini

A market term for a small hatchback car with a four-cylinder engine, as exemplified by the Renault 5 of 1972.

suspension

A system that cushions the car's structure (and occupants) from the motion of the wheels as they travel over uneven road surfaces.

SUV

Shorthand for Sport-Utility Vehicle, a high-riding car with four-wheel drive intended for consumer rather than industrial use.

swash plate

A plate attached at an angle to a rotating shaft that is used to convert the shaft's rotational movement into reciprocal motion at push rods lying parallel to the shaft axis.

swing axle suspension

An early type of independent rear suspension consisting of two half-axles pivoted at the rear differential. The wheels remain perpendicular to the axles at all times. The system improved ride comfort but could lead to alarming handling in high-speed manoeuvres, and has not been used for several decades.

synchromesh gearbox

A gearbox in which gear wheels are in constant mesh. All synchromesh gearboxes are universal in modern road cars.

tappet

A valvetrain component that makes sliding contact with the camshaft lobe, converting the cam's profile into the reciprocating motion of the valve.

Targa Florio

An open-road race through the mountains of Sicily, staged between 1906 and 1973, and since revived as a classic car event.

throttle

A device that controls the amount of air flowing into the engine.

torque

The twisting force produced by the engine.

torsion-bar

A suspension part that acts as a spring when twisted by the wheel's movements.

traction control

Electronic equipment, relying on sensors, that reduces wheelspin and, therefore, improves adhesion to the road.

trafficator

A direction indicator device, often found on the door pillar, that was common in cars until the mid 1950s. Trafficators consisted of a semaphore arm containing a small light protruding out of the side of a car to show which way the driver intended to turn. They were replaced by vastly more effective flashing indicator lights on permanent view on a car's bodywork.

transaxle

The term for an assembly that combines the gearbox and differential components in a single casing.

transmission

All the components of a car's drivetrain, though often it refers to the gearbox alone.

transmission tunnel

The raised section running lengthways along the centreline of the cabin of a car with a front engine and rear- or four-wheel drive. It houses the propshaft.

transverse engine

An engine that is mounted with its crankshaft axis across the car, rather than parallel to its centreline.

tuned

A term to describe an engine that has been modified for added performance.

turbocharger

A device fitted between an engine's inlet and exhaust systems that uses the exhaust gases to drive a turbine. This in turn drives a compressor that forces air into the inlet system, boosting engine power when the car is under hard acceleration.

turning circle

The diameter of the circle described by a car's outer front wheel when turning with its steering at full-lock.

twin-cam

See camshaft

two-stroke engine

An engine with pistons that move up once and down once (performing two "strokes") in the combustion cycle.

two-wheel drive

Transmission to the front two or rear two wheels only, in contrast to four-wheel drive.

undertray

A cover with a flat or shaped surface that bolts to the underside of a car to create better aerodynamics or protect components from damage.

unitary construction See monocoque

unblown

An engine without a supercharger or turbocharger, properly termed "normally aspirated".

V4, V6, V8, V10, V12, V16

The designations for engines designed with their cylinders arranged in a V-formation for compactness. The numbers relate to the number of cylinders in each engine.

vacuum advance

A mechanism that enables the distributor to adjust spark timing according to engine load.

valvetrain

The parts of the engine that control the operation of the valves.

water-cooling

A system that uses circulating water to cool engine components. It is the predominant cooling system in modern engines, though some use an air-cooling system.

waterfall grille

A curved radiator shroud on the exterior nose of an older car, whose bright metal slats and cascading shape give the impression of a waterfall rushing over the car's metal prow. Waterfall grilles give the feeling of being aerodynamic, although frequently they are just a styling feature.

wet-liner

A cylinder liner that is in direct contact with the engine's liquid coolant.

wheelbase

The exact distance between the axes of the front and rear wheels.

whitewall tyres

Tyres featuring a decorative ring of white rubber on their sidewalls. It was a popular styling fad, particularly in the US, from the late 1930s to the early 1960s.

wishbone suspension

An independent suspension system that uses two wishbone-shaped arms to link each wheel hub to the chassis.

works driver

A racing driver employed by a car manufacturer to drive for its team, as opposed to an independent "privateer".

Ziebart rust-proofing

A proprietary brand of rustproofing material, added to cars in private ownership to stop the buildup of rust. It is named after its inventor, ex-mechanic Kurt Ziebart.

Directory

The best way to experience classic cars is to own them, and when time, space, and means allow, it's possible to build up a personal collection. To see the widest range, however, including the rarest and most sought-after models, visiting a museum or collection is definitely worthwhile. There are a huge number around the world, large and small, with some displaying broad selections, and others instead specializing in specific marques or vehicle types. In addition to seeing fascinating cars, museums and collections can be an excellent source of advice and information for your own cars, or those you hope to own.

Acknowledgments

Dorling Kindersley would like to thank Editor-in-Chief, Giles Chapman, for his invaluable support in making this book.

In addition, Dorling Kindersley would like to extend thanks to Alvise-Marco Seno, Press Office, ZED Srl, Milan, Spain.

The publisher would like to thank the following people for their assistance in making the book: Steve Crozier at Butterfly Creative Solutions; Sanjay Chauhan for design help and Tina Jindal, Nishtha Kapil, Antara Moitra, Riji Raju, and Isha Sharma for editorial support at DK India; Joanna Chisholm for proofreading; and Vanessa Bird for preparing the index.

The publisher would also like to thank the following museums, companies, and individuals for their generosity in allowing Dorling Kindersley access to their cars for photography:
